

Table of contents

Introduction	1
I Groups acting on twin buildings	11
§1 Twin BN-pairs and RGD-systems	11
§2 Twin buildings and twin apartments	21
§3 Fundamental domains for strongly transitive actions on twin buildings	30
§4 Coprojections in twin buildings	33
Appendix: Coconvexity	39
§5 A G_{a_-} -invariant filtration of Δ_+	41
§6 Finiteness properties of G_{a_-}	45
II Homotopy properties of $\Delta^0(\mathbf{a})$	56
§1 Basic properties of $\Delta^0(a)$	56
§2 Examples and counter-examples	59
§3 General remarks concerning the sphericity proofs	68
§4 The case A_n	73
§5 Lemmata on hermitian and pseudo-quadratic forms	77
§6 The case C_n	83
§7 The case D_n	91
§8 Summary	105
III Finiteness properties of classical \mathbb{F}_q-groups over $\mathbb{F}_q[t]$	107
§1 Twin BN-pairs in isometry groups over $k[t, t^{-1}]$	107
§2 The finiteness length of $\mathcal{G}(\mathbb{F}_q[t])$	112
Bibliography	115
Index of notations	120
Subject Index	121
