

Contents

| | |
|---|----|
| Introduction | 1 |
| Chapter I. Equivariant cellular and homology theory | 11 |
| 1. Some basic definitions and adjunctions | 11 |
| 2. Analogues for based G -spaces | 12 |
| 3. G -CW complexes | 13 |
| 4. Ordinary homology and cohomology theories | 16 |
| 5. Obstruction theory | 18 |
| 6. Universal coefficient spectral sequences | 19 |
| Chapter II. Postnikov systems, localization, and completion | 21 |
| 1. Eilenberg-Mac Lane G -spaces and Postnikov systems | 21 |
| 2. Summary: localizations of spaces | 22 |
| 3. Localizations of G -spaces | 23 |
| 4. Summary: completions of spaces | 24 |
| 5. Completions of G -spaces | 26 |
| Chapter III. Equivariant rational homotopy theory (by Georgia Triantafillou) | 27 |
| 1. Summary: the theory of minimal models | 27 |
| 2. Equivariant minimal models | 29 |
| 3. Rational equivariant Hopf spaces | 31 |
| Chapter IV. Smith theory | 33 |
| 1. Smith theory via Bredon cohomology | 33 |
| 2. Borel cohomology, localization, and Smith theory | 35 |
| Chapter V. Categorical constructions; equivariant applications | 39 |
| 1. Coends and geometric realization | 39 |
| 2. Homotopy colimits and limits | 41 |
| 3. Elmendorf's theorem on diagrams of fixed point spaces | 43 |
| 4. Eilenberg-Mac Lane G -spaces and universal \mathcal{F} -spaces | 45 |
| Chapter VI. The homotopy theory of diagrams (by Robert J. Piacenza) | 47 |
| 1. Elementary homotopy theory of diagrams | 47 |
| 2. Homotopy groups | 49 |
| 3. Cellular theory | 50 |
| 4. The homology and cohomology theory of diagrams | 52 |
| 5. The closed model structure on \mathcal{U}^J | 53 |
| 6. Another proof of Elmendorf's theorem | 56 |
| Chapter VII. Equivariant bundle theory and classifying spaces | 59 |
| 1. The definition of equivariant bundles | 59 |
| 2. The classification of equivariant bundles | 60 |
| 3. Some examples of classifying spaces | 62 |

| | |
|---|-----|
| Chapter VIII. The Sullivan conjecture | 67 |
| 1. Statements of versions of the Sullivan conjecture | 67 |
| 2. Algebraic preliminaries: Lannes' functors T and Fix | 70 |
| 3. Lannes' generalization of the Sullivan conjecture | 71 |
| 4. Sketch proof of Lannes' theorem | 73 |
| 5. Maps between classifying spaces | 75 |
| Chapter IX. An introduction to equivariant stable homotopy | 79 |
| 1. G -spheres in homotopy theory | 79 |
| 2. G -Universes and stable G -maps | 81 |
| 3. Euler characteristic and transfer G -maps | 83 |
| 4. Mackey functors and coMackey functors | 84 |
| 5. $RO(G)$ -graded homology and cohomology | 86 |
| 6. The Conner conjecture | 88 |
| Chapter X. G-CW(V) complexes and $RO(G)$-graded cohomology (by Stefan Waner) | 89 |
| 1. Motivation for cellular theories based on representations | 89 |
| 2. G -CW(V) complexes | 90 |
| 3. Homotopy theory of G -CW(V) complexes | 92 |
| 4. Ordinary $RO(G)$ -graded homology and cohomology | 94 |
| Chapter XI. The equivariant Hurewicz and suspension theorems (by L. Guance Lewis, Jr.) | 97 |
| 1. Background on the classical theorems | 97 |
| 2. Formulation of the problem and counterexamples | 98 |
| 3. An oversimplified description of the results | 101 |
| 4. The statements of the theorems | 103 |
| 5. Sketch proofs of the theorems | 106 |
| Chapter XII. The equivariant stable homotopy category | 111 |
| 1. An introductory overview | 111 |
| 2. Prespectra and spectra | 113 |
| 3. Smash products | 115 |
| 4. Function spectra | 117 |
| 5. The equivariant case | 119 |
| 6. Spheres and homotopy groups | 119 |
| 7. G -CW spectra | 122 |
| 8. Stability of the stable category | 125 |
| 9. Getting into the stable category | 126 |
| Chapter XIII. $RO(G)$-graded homology and cohomology theories | 129 |
| 1. Axioms for $RO(G)$ -graded cohomology theories | 129 |
| 2. Representing $RO(G)$ -graded theories by G -spectra | 131 |
| 3. Brown's theorem and $RO(G)$ -graded cohomology | 134 |
| 4. Equivariant Eilenberg-Mac Lane spectra | 136 |
| 5. Ring G -spectra and products | 139 |
| Chapter XIV. An introduction to equivariant K-theory (by J. P. C. Greenlees) | 143 |
| 1. The definition and basic properties of K_G -theory | 143 |
| 2. Bundles over a point: the representation ring | 144 |
| 3. Equivariant Bott periodicity | 146 |
| 4. Equivariant K -theory spectra | 147 |
| 5. The Atiyah-Segal completion theorem | 149 |

| | |
|---|-----|
| 6. The generalization to families | 151 |
| Chapter XV. An introduction to equivariant cobordism (by S. R. Costenoble) | 153 |
| 1. A review of nonequivariant cobordism | 153 |
| 2. Equivariant cobordism and Thom spectra | 155 |
| 3. Computations: the use of families | 158 |
| 4. Special cases: odd order groups and $\mathbb{Z}/2$ | 161 |
| Chapter XVI. Spectra and G-spectra; change of groups; duality | 163 |
| 1. Fixed point spectra and orbit spectra | 163 |
| 2. Split G -spectra and free G -spectra | 165 |
| 3. Geometric fixed point spectra | 166 |
| 4. Change of groups and the Wirthmüller isomorphism | 167 |
| 5. Quotient groups and the Adams isomorphism | 169 |
| 6. The construction of G/N -spectra from G -spectra | 171 |
| 7. Spanier-Whitehead duality | 173 |
| 8. V -duality of G -spaces and Atiyah duality | 175 |
| 9. Poincaré duality | 176 |
| Chapter XVII. The Burnside ring | 179 |
| 1. Generalized Euler characteristics and transfer maps | 179 |
| 2. The Burnside ring $A(G)$ and the zero stem $\pi_0^G(S)$ | 182 |
| 3. Prime ideals of the Burnside ring | 183 |
| 4. Idempotent elements of the Burnside ring | 185 |
| 5. Localizations of the Burnside ring | 186 |
| 6. Localization of equivariant homology and cohomology | 188 |
| Chapter XVIII. Transfer maps in equivariant bundle theory | 191 |
| 1. The transfer and a dimension-shifting variant | 191 |
| 2. Basic properties of transfer maps | 193 |
| 3. Smash products and Euler characteristics | 195 |
| 4. The double coset formula and its applications | 197 |
| 5. Transitivity of the transfer | 201 |
| Chapter XIX. Stable homotopy and Mackey functors | 203 |
| 1. The splitting of equivariant stable homotopy groups | 203 |
| 2. Generalizations of the splitting theorems | 206 |
| 3. Equivalent definitions of Mackey functors | 207 |
| 4. Induction theorems | 209 |
| 5. Splittings of rational G -spectra for finite groups G | 212 |
| Chapter XX. The Segal conjecture | 215 |
| 1. The statement in terms of completions of G -spectra | 215 |
| 2. A calculational reformulation | 217 |
| 3. A generalization and the reduction to finite p -groups | 219 |
| 4. The proof of the Segal conjecture for finite p -groups | 221 |
| 5. Approximations of singular subspaces of G -spaces | 223 |
| 6. An inverse limit of Adams spectral sequences | 225 |
| 7. Further generalizations; maps between classifying spaces | 227 |
| Chapter XXI. Generalized Tate cohomology (by J. P. C. Greenlees and J. P. May) | 231 |
| 1. Definitions and basic properties | 231 |
| 2. Ordinary theories; Atiyah-Hirzebruch spectral sequences | 234 |
| 3. Cohomotopy, periodicity, and root invariants | 236 |

| | |
|--|-----|
| 4. The generalization to families | 237 |
| 5. Equivariant K -theory | 240 |
| 6. Further calculations and applications | 242 |
| Chapter XXII. Twisted half-smash products and function spectra (by Michael Cole) | 247 |
| 1. Introduction | 247 |
| 2. The category $GS(U'; U)$ | 250 |
| 3. Smash products and function spectra | 251 |
| 4. The object $\mathcal{M}\alpha \in GS(U'; U)$ | 252 |
| 5. Twisted half-smash products and function spectra | 255 |
| 6. Homotopical properties of $\alpha \times E$ and $F[\alpha, E']$ | 257 |
| Chapter XXIII. Brave new algebra | 261 |
| 1. The category of S -modules | 261 |
| 2. Categories of R -modules | 263 |
| 3. The algebraic theory of R -modules | 265 |
| 4. The homotopical theory of R -ring spectra | 267 |
| 5. Categories of R -algebra | 271 |
| 6. Bousfield localizations of R -modules and algebras | 274 |
| 7. Topological Hochschild homology and cohomology | 277 |
| 8. The construction of THH via the standard complex | 279 |
| Chapter XXIV. Brave new equivariant foundations (by A. D. Elmendorf, L. G. Lewis, Jr., and J. P. May) | 283 |
| 1. The category of \mathbb{L} -spectra | 283 |
| 2. A_∞ and E_∞ ring spectra and S -algebras | 286 |
| 3. Alternative perspectives on equivariance | 288 |
| 4. The construction of equivariant algebras and modules | 291 |
| 5. Comparisons of categories of L - G -spectra | 295 |
| Chapter XXV. Brave new equivariant algebra (by J. P. C. Greenlees and J. P. May) | 299 |
| 1. Introduction | 299 |
| 2. Local and Čech cohomology in algebra | 300 |
| 3. Brave new versions of local and Čech cohomology | 301 |
| 4. Localization theorems in equivariant homology | 302 |
| 5. Completions, completion theorems, and local homology | 305 |
| 6. A proof and generalization of the localization theorem | 307 |
| 7. The application to K -theory | 310 |
| 8. Local Tate cohomology | 311 |
| Chapter XXVI. Localization and completion in complex bordism (by J. P. C. Greenlees and J. P. May) | 315 |
| 1. The localization theorem for stable complex bordism | 315 |
| 2. An outline of the proof | 316 |
| 3. The norm map and its properties | 318 |
| 4. The idea behind the construction of norm maps | 320 |
| 5. Global \mathcal{S}_* -functors with smash product | 322 |
| 6. The definition of the norm map | 325 |
| 7. The splitting of MU_G as an algebra | 326 |
| Chapter XXVII. A completion theorem in complex cobordism (by G. Comezaña and J. P. May) | 327 |
| 1. Statement of the theorem and preliminary results | 327 |

| | |
|--|-----|
| 2. Gysin sequences | 329 |
| 3. Iterated completions | 330 |
| Chapter XXVIII. Calculations in complex equivariant bordism (by G. Comezaña) | 333 |
| 1. Notations and terminology | 333 |
| 2. Stably almost complex structures and bordism | 334 |
| 3. Tangential structures | 336 |
| 4. Computational tools | 339 |
| 5. Statements of the main results | 342 |
| 6. Preliminary lemmas and families in $G \times S^1$ | 343 |
| 7. On the families \mathcal{F}_i in $G \times S^1$ | 344 |
| 8. Passing from G to $G \times S^1$ and $G \times \mathbb{Z}_k$ | 349 |
| Bibliography | 353 |
| Index | 361 |
