| Introduction | 1 |
| Chapter 1. The Complex Integration Method and Its Application in Number Theory | 8 |
| 1. Generating Functions in Number Theory | 8 |
| 1.1 Dirichlet's series | 8 |
| 1.2 Sum functions | 11 |
| 2. Summation Formula | 13 |
| 2.1 Perron's formula | 13 |
| 2.2 Expressing Chebyshev's function in terms of the integral of the logarithmic derivative of Riemann's zeta-function | 14 |
| 3. Riemann's Zeta-Function and Its Simplest Properties . . | 15 |
| 3.1 The functional equation | 15 |
| 3.2 Riemann's hypotheses | 17 |
| 3.3 The simplest theorems on the zeros of $\zeta(s)$ | 18 |
| 3.4 Expressing Chebyshev's function as a sum over the complex zeros of $\zeta(s)$ | 19 |
| 3.5 The asymptotic law of distribution of prime numbers | 20 |
| 3.6 Riemann's hypothesis concerning the complex zeros of $\zeta(s)$ and the problem of the theory of prime numbers | 21 |
| 3.7 Theorem on the uniqueness of $\zeta(s)$ | 23 |
| 3.8 Proofs of the simplest theorems on the complex zeros of $\zeta(s)$ | 24 |

| | |
|---|-----------|
| Chapter 2. The Theory of Riemann's Zeta-Function | 31 |
| 1. Zeros on the Critical Line | 31 |
| 1.1 Hardy's theorem | 31 |
| 1.2 Theorems of Hardy and Littlewood | 31 |
| 1.3 Hardy's function and Hardy's method | 32 |
| 1.4 Titchmarsh's discrete method | 35 |
| 1.5 Selberg's theorem | 35 |
| 1.6 Estimates of Selberg's constant | 36 |
| 1.7 Moser's theorems | 37 |
| 1.8 Selberg's hypothesis | 38 |
| 1.9 Zeros of the derivatives of Hardy's function | 39 |
| 1.10 The latest results | 40 |
| 1.11 Distribution of zeros in the mean | 41 |
| 1.12 Density of zeros on the critical line | 41 |
| 1.13 The zeros of $\zeta(s)$ in the neighborhood of the critical line | 42 |
| 2. The Boundary of Zeros | 43 |
| 2.1 De la Vallée Poussin theorem | 43 |
| 2.2 Littlewood's theorem | 43 |
| 2.3 The relationship between the boundary of zeros and the order of growth of $ \zeta(s) $ in the neighbor- hood of unit line | 44 |
| 2.4 Vinogradov's method in the theory of $\zeta(s)$ and Chu- dakov's theorems | 45 |
| 2.5 Vinogradov's theorem | 46 |
| 3. Approximate Equations of the $\zeta(s)$ Function | 47 |
| 3.1 Partial summation and Euler's summation formula | 47 |
| 3.2 The simplest approximation of $\zeta(s)$ | 49 |
| 3.3 The approximation of a trigonometric sum by a sum of trigonometric integrals | 50 |
| 3.4 Asymptotic calculations of a certain class of trigono- metric integrals | 57 |
| 3.5 Approximation of a trigonometric sum by a more concise sum | 66 |
| 3.6 Approximate equations of the $\zeta(s)$ function | 69 |
| 3.7 On trigonometric integrals | 73 |

| | | |
|-----|---|-----|
| 4. | The Method of Trigonometric Sums in the Theory of the $\zeta(s)$ Function | 77 |
| 4.1 | The mean value of the degree of the modulus of a trigonometric sum | 77 |
| 4.2 | Simple lemmas | 78 |
| 4.3 | The basic recurrent inequality | 83 |
| 4.4 | Vinogradov's mean-value theorem | 89 |
| 4.5 | The estimate of the zeta sum and its consequences | 91 |
| 4.6 | The current boundary of zeros of $\zeta(s)$ and its corollaries | 98 |
| 5. | Density Theorems | 100 |
| 5.1 | Bertrand's postulate and Chebyshev's theorem | 100 |
| 5.2 | Hoheisel's method | 100 |
| 5.3 | Density of zeros of $\zeta(s)$ | 102 |
| 5.4 | Density theorems | 103 |
| 5.5 | Proof of Huxley's density theorem | 104 |
| 5.6 | Three problems of the number theory solvable by Hoheisel's method | 120 |
| 6. | The Order of Growth of $ \zeta(s) $ in a Critical Strip | 122 |
| 6.1 | The problem of Dirichlet's divisors | 123 |
| 6.2 | Lindelöf's hypothesis | 124 |
| 6.3 | Equivalents of Lindelöf's hypothesis | 125 |
| 6.4 | The order of growth of $ \zeta(\frac{1}{2} + it) $ | 126 |
| 6.5 | Vinogradov's method in Dirichlet's multi-dimensional divisor problem | 127 |
| 6.6 | Omega-theorems | 130 |
| 7. | Universal Properties of the $\zeta(s)$ Function | 130 |
| 7.1 | Bohr's theorems | 130 |
| 7.2 | Voronin's theorems | 132 |
| 7.3 | Theorem on the universal character of $\zeta(s)$ | 134 |
| 7.4 | More on the universal character of $\zeta(s)$ | 135 |
| 8. | Riemann's Hypothesis, Its Equivalents, Computations | 135 |
| 8.1 | Mertens' hypothesis | 136 |
| 8.2 | Turan's hypothesis and its refutation | 137 |
| 8.3 | A billion and a half complex zeros of $\zeta(s)$ | 138 |
| 8.4 | Computations connected with $\zeta(s)$ | 138 |

| | | |
|-----|--|-----|
| 8.5 | Functions resembling $\zeta(s)$ but having complex zeros on the right of the critical line | 139 |
| 8.6 | Epstein's zeta-functions | 140 |
| 8.7 | A new approach to the problem of zeros, lying on the critical line, of some Dirichlet series | 141 |

Chapter 3. Dirichlet L -Functions 147

| | | |
|-----|--|-----|
| 1. | Dirichlet's Characters | 147 |
| 1.1 | Definition of characters | 147 |
| 1.2 | Principal properties of characters | 148 |
| 2. | Dirichlet L -Functions and Prime Numbers in Arithmetic Progressions | 149 |
| 2.1 | Definition of L -functions | 149 |
| 2.2 | The functions $\pi(x; k, l)$ and $\psi(x; k, l)$ | 150 |
| 2.3 | Dirichlet's theorem on primes | 150 |
| 3. | Zeros of L -Functions | 152 |
| 3.1 | The boundary of zeros. Page's theorems | 152 |
| 3.2 | Siegel's theorem | 153 |
| 3.3 | Zeros on the critical line | 153 |
| 4. | Real Zeros of L -Functions and the Number of Classes of Binary Quadratic Forms | 154 |
| 4.1 | Binary quadratic forms and the number of classes | 154 |
| 4.2 | Dirichlet's formulas | 156 |
| 4.3 | Gauss' problem and Siegel's theorem | 156 |
| 4.4 | Prime numbers in arithmetic progressions | 157 |
| 5. | Density Theorems | 158 |
| 5.1 | Linnik's density theorems | 158 |
| 5.2 | Density theorems of a large sieve and the Bombieri-Vinogradov theorem | 158 |
| 5.3 | Current density theorems | 160 |
| 5.4 | Proof of Vinogradov's theorem on three prime numbers based on the ideas of Hardy-Littlewood-Linnik | 160 |
| 6. | L -Functions and Nonresidues | 163 |
| 6.1 | The concept of a nonresidue | 163 |
| 6.2 | Vinogradov's hypothesis | 163 |

| | | |
|-----|---|-----|
| 6.3 | Lindelöf's generalized hypothesis and a nonresidue | 164 |
| 6.4 | The zeros of the L -functions and nonresidues . . . | 164 |
| 7. | Approximate Equations | 165 |
| 7.1 | Stating the problem | 165 |
| 7.2 | Lavrik's general theorem | 165 |
| 8. | On Primitive Roots | 168 |
| 8.1 | The concept of a primitive root | 168 |
| 8.2 | Artin's hypothesis | 168 |
| 8.3 | Hooley's conditional theorem | 168 |
