

Prologue: A View from 1988	vii
0 Introduction	1
 I	
Algebraic Theory of Linear Parallel Predicates	21
1 Theory of Linear Boolean Inequalities	25
2 Group Invariance of Boolean Inequalities	39
3 Parity and One-in-a-box Predicates	56
4 The “And/Or” Theorem	62
 II	
Geometric Theory of Linear Inequalities	69
5 $\psi_{\text{CONNECTED}}$: A Geometric Property with Unbounded Order	73
6 Geometric Patterns of Small Order: Spectra and Context	96
7 Stratification and Normalization	114
8 The Diameter-limited Perception	129
9 Geometric Predicates and Serial Algorithms	136
 III	
Learning Theory	149
10 Magnitude of the Coefficients	151
11 Learning	161
12 Linear Separation and Learning	188
13 Perceptions and Pattern Recognition	227
Epilogue: The New Connectionism	247
Bibliographic Notes	281
Index	295
