

CONTENTS

Preface	xi
1 Background in physics	1
1.1 Path integral and quantum field theories	1
1.2 Gauge theories	10
1.3 Magnetic monopoles	14
1.4 Instantons	17
1.5 Orders in condensed matter systems	19
1.6 General relativity	27
1.7 Berry's phase	29
1.8 String theory	30
Problems 1	33
2 Mathematical preliminaries	35
2.1 Maps	35
2.2 Vector spaces	43
2.3 Topological spaces	48
2.4 Homeomorphisms and topological invariants	53
Problems 2	59
3 Homology groups	61
3.1 Abelian groups	61
3.2 Simplexes and simplicial complexes	66
3.3 Homology groups of simplicial complexes	69
3.4 General properties of homology groups	84
4 Homotopy groups	89
4.1 Fundamental groups	89
4.2 General properties of fundamental groups	94
4.3 Examples of fundamental groups	99
4.4 Fundamental groups of polyhedra	102
4.5 Higher homotopy groups	113
4.6 General properties of higher homotopy groups	116

4.7	Examples of higher homotopy groups	119
4.8	Defects in nematic liquid crystals	121
4.9	Textures in superfluid $^3\text{He-A}$	125
	Problems 4	128
5	Manifolds	130
5.1	Manifolds	130
5.2	The calculus on manifolds	140
5.3	Flows and Lie derivatives	150
5.4	Differential forms	157
5.5	Integration of differential forms	164
5.6	Lie groups and Lie algebras	167
5.7	The action of Lie groups on manifolds	177
	Problems 5	185
6	de Rham cohomology groups	187
6.1	Stokes' theorem	187
6.2	de Rham cohomology groups	191
6.3	Poincaré's lemma	196
6.4	Structure of de Rham cohomology groups	198
7	Riemannian geometry	204
7.1	Riemannian manifolds and pseudo-Riemannian manifolds	204
7.2	Parallel transport, connection and covariant derivative	207
7.3	Curvature and torsion	215
7.4	Levi-Civita connections	221
7.5	Holonomy	232
7.6	Isometries and conformal transformations	234
7.7	Killing vector fields and conformal Killing vector fields	239
7.8	Non-coordinate bases	243
7.9	Differential forms and Hodge theory	249
7.10	Aspects of general relativity and the Polyakov string	257
	Problems 7	263
8	Complex manifolds	265
8.1	Complex manifolds	265
8.2	Calculus on complex manifolds	273
8.3	Complex differential forms	277

8.4	Hermitian manifolds and Hermitian differential geometry	281
8.5	Kähler manifolds and Kähler differential geometry	287
8.6	Harmonic forms and $\bar{\partial}$ -cohomology groups	292
8.7	Almost complex manifolds	297
8.8	Orbifolds	300
9	Fibre bundles	303
9.1	Tangent bundles	303
9.2	Fibre bundles	305
9.3	Vector bundles	313
9.4	Principal bundles	318
	Problems 9	328
10	Connections on fibre bundles	329
10.1	Connections on principal bundles	329
10.2	Holonomy	339
10.3	Curvature	340
10.4	The covariant derivative on associated vector bundles	346
10.5	Gauge theories	354
10.6	Berry's phase	364
	Problems 10	371
11	Characteristic classes	373
11.1	Invariant polynomials and the Chern–Weil homomorphism	373
11.2	Chern classes	380
11.3	Chern characters	385
11.4	Pontrjagin and Euler classes	389
11.5	Chern–Simons forms	397
11.6	Stiefel–Whitney classes	402
12	Index theorems	406
12.1	Elliptic operators and Fredholm operators	406
12.2	The Atiyah–Singer index theorem	412
12.3	The de Rham complex	413
12.4	The Dolbeault complex	415
12.5	The signature complex	417

12.6	Spin complexes	420
12.7	The heat kernel and generalised ζ -functions	424
12.8	The Atiyah–Patodi–Singer index theorem	429
	Problems 12	433
13	Anomalies in gauge field theories	434
13.1	Introduction	434
13.2	Abelian anomalies	435
13.3	Non-Abelian anomalies	441
13.4	The Wess–Zumino consistency conditions	445
13.5	Abelian anomalies versus non-Abelian anomalies	451
13.6	The parity anomaly in odd-dimensional spaces	456
14	Bosonic string theory	461
14.1	Differential geometry on Riemann surfaces	461
14.2	Quantum theory of bosonic strings	468
14.3	One-loop amplitudes	487
	References	492
	Index	497
