<b>Preface</b>	vii
<b>Introduction</b>	1
<b>1. Weak Convergence</b>	4
A. Review of Basic Theory	6
B. Convergence of Averages	6
C. Compactness in Sobolev Spaces	6
1. Embeddings	6
2. Compactness Theorems	7
3. A Refinement of Rellich's Theorem	8
D. Measures of Concentration	9
1. Generalities	9
2. Defect Measures	10
3. A Refinement of Fatou's Lemma	11
4. Concentration and Sobolev Inequalities	12
E. Measures of Oscillation	14
1. Generalities	14
2. Slicing Measures	14
3. Young Measures	15
<b>2. Convexity</b>	18
A. The Calculus of Variations	18
B. Weak Lower Semicontinuity	19
C. Convergence of Energies and Strong Convergence	21
<b>3. Quasiconvexity</b>	22
A. Definitions	22
1. Rank-One Convexity	22
2. Quasiconvexity	23
B. Weak Lower Semicontinuity	24
C. Convergence of Energies and Strong Convergence	27
D. Partial Regularity of Minimizers	29
E. Examples	31
1. Weak Continuity of Determinants	31
2. Polyconvexity	32

<b>4. Concentrated Compactness</b>	33
A. Variational Problems	33
1. Minimizers for Critical Sobolev Nonlinearities	33
2. Strong Convergence of Minimizing Sequences	36
B. Concentration-Cancellation	38
1. Critical Gradient Growth	38
2. Vorticity Bounds and Euler's Equations	42
<b>5. Compensated Compactness</b>	48
A. Direct Methods	48
1. Harmonic Maps into Spheres	48
2. Homogenization of Divergence Structure PDE's	49
3. Monotonicity, Minty-Browder Method in $L^2$	51
B. Div-Curl Lemma	53
C. Elliptic Systems	54
D. Conservation Laws	56
1. Single Equations	56
2. Systems of Two Equations	58
E. Generalization of Div-Curl Lemma	62
<b>6. Maximum Principle Methods</b>	65
A. The Maximum Principle for Fully Nonlinear PDE	65
1. Minty-Browder Method in $L^\infty$	65
2. Viscosity Solutions	68
B. Homogenization of Nondivergence Structure PDE's	69
C. Singular Perturbations	71
<b>Appendix</b>	73
<b>Notes</b>	74
<b>References</b>	76
