

# CONTENTS

<b>1. INTRODUCTION</b>	<b>1</b>
1.1 Motivation for and general contents of the book . . . . .	1
1.2 A proof scenario . . . . .	3
1.2.1 Some details on a variant of set theory . . . . .	4
1.2.2 Some elementary definitions . . . . .	8
1.2.3 The Unique Factorization Theorem . . . . .	10
1.3 State of the art of syllogistics . . . . .	13
1.3.1 Ground formulae . . . . .	14
1.3.2 Satisfiability and validity . . . . .	15
1.3.3 Decidability . . . . .	16
1.3.4 Known satisfiability decision tests . . . . .	16
1.3.5 Examples of syllogisms . . . . .	21
1.3.6 An application to program correctness verification . . . . .	24
1.4 A sample satisfiability decision test . . . . .	25
1.4.1 Syllogistic diagrams . . . . .	26
1.4.2 Computation of the pseudo-ranks . . . . .	28
1.4.3 Contradictory diagrams . . . . .	29
1.4.4 Dense syllogistic diagrams . . . . .	29
1.4.5 The decision method . . . . .	31
1.4.6 Syllogistic decomposition . . . . .	32
<b>Part I FUNDAMENTALS</b>	<b>35</b>
<b>2. CLASSES AND ORDERINGS</b>	<b>37</b>
2.1 Introduction . . . . .	37
2.2 Basic notation, assumptions, and terminology . . . . .	37
2.3 Transitive sets (natural, ordinal, and cardinal numbers). Trans-finite induction . . . . .	42
2.4 Anti-lexicographic orderings. Concatenation of well-orderings .	45
2.5 The von Neumann universe and its ordering . . . . .	53
2.6 Well-founded graphs and their realizations. The principle of transfinite recursion . . . . .	62

<b>3. THE VALIDITY PROBLEM</b>	<b>77</b>
3.1 Introduction . . . . .	77
3.2 Language . . . . .	78
3.3 Semantics . . . . .	81
3.4 Shorthand notations . . . . .	83
3.5 Redundancies . . . . .	88
3.6 Restricted notions of satisfiability and validity . . . . .	91
3.7 Absolute notions of satisfiability and validity. Decision tests . .	92
3.8 Normalization of formulae . . . . .	96
3.9 Quantifier elimination . . . . .	99
<b>4. A PARTIAL SOLUTION TO THE FINITE SATISFIABILITY PROBLEM</b>	<b>102</b>
4.1 Introduction . . . . .	102
4.2 Closure properties of superstructures. Safe formulae . . . . .	104
4.3 König's lemma . . . . .	107
4.4 $n$ -terms . . . . .	109
4.5 The characteristic tuple of a superstructure . . . . .	111
4.6 Normalization of $n$ -terms. Evaluation of safe formulae . . . . .	117
4.7 First semi-decision procedure . . . . .	122
4.8 An $\in$ - $<$ -isomorphism from $B_m$ into $\mathcal{H}$ . . . . .	123
<b>5. ELEMENTARY SYLLOGISTICS</b>	<b>131</b>
5.1 Introduction . . . . .	131
5.2 A technique for realizing well-founded graphs whose nodes are ordered . . . . .	133
5.3 Application of the reflection lemma to the decision problems of two elementary syllogistics . . . . .	138
5.4 An improved decision algorithm for an elementary syllogistic involving $\eta$ . . . . .	140
5.5 An improved decision algorithm for the elementary syllogistic involving $\subseteq$ , $\cap$ , and <i>Finite</i> . . . . .	148
5.6 A collection of safe formulae for which finite satisfiability is decidable . . . . .	155
5.7 A decision algorithm for an elementary syllogistic involving $\{\bullet, \dots, \bullet\}$ and $\eta$ . . . . .	160
<b>6. MULTILEVEL SYLLOGISTIC</b>	<b>163</b>
6.1 Introduction . . . . .	163
6.2 Syllogistic schemes over a family of set variables . . . . .	165
6.3 Syllogistic schemes as generators of the models of formulae . .	171
6.4 A decision algorithm for MLSF . . . . .	174

6.5	An improved decision algorithm for MLSF . . . . .	181
6.5.1	Determination of $\sim_p$ . . . . .	181
6.5.2	$p$ -compatibility test . . . . .	183
6.5.3	Generation of a $p \sim_p$ -compatible DAG . . . . .	183
6.5.4	Algorithm . . . . .	186
6.6	Proof of correctness for the improved decision algorithm . . . . .	188
6.7	How to embed two-level syllogistic into MLS . . . . .	192
6.8	Venn diagrams and their affinity with syllogistic schemes . . . . .	194
<b>7.</b>	<b>RESTRICTED QUANTIFIERS, ORDINALS, AND <math>\omega</math></b>	<b>197</b>
7.1	Introduction . . . . .	197
7.2	The elementary syllogistic including only $=, \in, \emptyset$ . . . . .	198
7.3	A satisfiability algorithm for a class of quantified formulae . . . . .	200
7.4	A quantified formula expressing infinite sets . . . . .	204
7.5	An elementary syllogistic including integers and ordinals . . . . .	205
7.6	A quantified syllogistic including integers and ordinals . . . . .	208

## **Part II EXTENDED MULTILEVEL SYLLOGISTICS** **213**

<b>8.</b>	<b>THE POWERSET OPERATOR</b>	<b>215</b>
8.1	Introduction . . . . .	215
8.2	Preliminaries . . . . .	216
8.3	The main result . . . . .	219
8.4	Proof of the Main Inductive Lemma . . . . .	236
8.5	Termination proof . . . . .	247
<b>9.</b>	<b>MAP CONSTRUCTS</b>	<b>254</b>
9.1	Introduction and preliminaries . . . . .	254
9.2	The decision algorithm . . . . .	259
9.3	Completeness of the decision algorithm . . . . .	266
<b>10.</b>	<b>THE UNIONSET OPERATOR</b>	<b>286</b>
10.1	Preliminaries . . . . .	286
10.2	The decision algorithm in the absence of trapped places . . . . .	290
10.3	The decision algorithm when trapped places are present . . . . .	300
<b>11.</b>	<b>THE CHOICE OPERATOR</b>	<b>317</b>
11.1	Introduction . . . . .	317
11.1.1	Scenario of a proof exploiting the properties of $\eta$ . . . . .	318
11.2	Syllogistic diagrams . . . . .	319

11.2.1 Dense syllogistic diagrams . . . . .	322
11.2.2 Sets inducing syllogistic diagrams . . . . .	324
11.3 Decidability of the theory MLSSFR . . . . .	326
11.4 Ordered syllogistic diagrams . . . . .	328
11.4.1 The completeness assumption . . . . .	329
11.4.2 Sets inducing ordered syllogistic diagrams . . . . .	330
11.4.3 Consistency of the completeness assumption . . . . .	331
11.5 Decidability of the theory MLSSFRC . . . . .	331
