Contents

Introduction vii

Part I. Questions Related to the Existence, Uniqueness and Regularity of Solutions

Orientation 1

1. REPRESENTATION OF A FLOW. THE NAVIER–STOKES EQUATIONS

2. FUNCTIONAL SETTING OF THE EQUATIONS
2.1. Function spaces 7
2.2. The Stokes problem and the operator A 9
2.3. Sobolev inequalities. The trilinear form b 11
2.4. Variational formulation of the equations 13
2.5. Flow in a bounded domain 15

3. EXISTENCE AND UNIQUENESS THEOREMS (MOSTLY CLASSICAL RESULTS)
3.1. A priori estimates 17
3.2. Existence and uniqueness results 21
3.3. Outlines of the proofs 23
3.4. Generic solvability of the Navier–Stokes equations 25

4. NEW A PRIORI ESTIMATES AND APPLICATIONS
4.1. Energy inequalities and consequences 29
4.2. Structure of the singularity set of a weak solution 32
4.3. New a priori estimates 32

5. REGULARITY AND FRACTIONAL DIMENSION
5.1. Hausdorff measure. Time singularities 35
5.2. Space and time singularities 36

6. SUCCESSIVE REGULARITY AND COMPATIBILITY CONDITIONS AT $t=0$ (BOUNDED CASE)
6.1. Further properties of the operators A and B 43
6.2. Regularity results 44
6.3. Other results 47

7. ANALYTICITY IN TIME
7.1. The analyticity result 51
7.2. Remarks 56

8. LAGRANGIAN REPRESENTATION OF THE FLOW
8.1. The main result 57
8.2. Proof of Theorem 8.1 58
8.3. Appendix 60

Part II. Questions Related to Stationary Solutions and Functional Invariant Sets (Attractors)

Orientation 61

9. THE COUETTE–TAYLOR EXPERIMENT

10. STATIONARY SOLUTIONS OF THE NAVIER–STOKES EQUATIONS
10.1. Behavior for $t \to \infty$. The trivial case 67
10.2. An abstract theorem on stationary solutions 71
10.3. Application to the Navier–Stokes equations 72
10.4. Counterexamples 76

11. THE SQUEEZING PROPERTY
11.1. An a priori estimate on strong solutions 79
11.2. The squeezing property 79

12. HAUSDORFF DIMENSION OF AN ATTRACTOR
12.1. Functional invariant sets and attractors 85
12.2. Hausdorff dimension of functional invariant sets 86
12.3. Other properties of functional invariant sets 89

Part III. Questions Related to the Numerical Approximation

Orientation 91

13. FINITE TIME APPROXIMATION
13.1. An example of space-time discretization 93
13.2. The convergence theorem 95

13.3. A compactness theorem 97
13.4. Proof of Theorem 13.1 (conclusion) 100

14. LONG TIME APPROXIMATION OF THE NAVIER–STOKES EQUATIONS
14.1. Long time finite dimensional approximation 105
14.2. Galerkin approximation 109

Comments and Bibliography 113
