Contents

	Preface	ix
1	History and background	1
	1.1 *General introduction*	1
	1.2 *Gauge theories*	2
	1.3 *History of knot theory*	5
	1.4 *The Jones polynomial*	7
2	Topological quantum field theories	12
	2.1 *Axioms for a topological QFT*	12
	2.2 *Canonical quantization*	17
	2.3 *Θ-functions*	19
3	Non-abelian moduli spaces	24
	3.1 *Moduli spaces of representations*	24
	3.2 *Moduli spaces of holomorphic bundles*	26
4	Symplectic quotients	30
	4.1 *Geometric invariant theory*	30
	4.2 *Symplectic quotients*	31
	4.3 *Quantization*	33
	4.4 *Co-adjoint orbits*	35
5	The infinite-dimensional case	37
	5.1 *Connections on Riemann Surfaces*	37
	5.2 *Marked points*	40
	5.3 *Boundary components*	42
6	Projective flatness	45
	6.1 *The direct approach*	45
	6.2 *Conformal field theory*	46
	6.3 *Abelianization*	47
	6.4 *Degeneration of curves*	50

7 The Feynman integral formulation 52
7.1 *The Chern–Simons Lagrangian* 52
7.2 *Stationary-phase approximations* 55
7.3 *The Hamiltonian formulation* 63
8 Final comments 66
8.1 *Vacuum vectors* 66
8.2 *Skein relations* 67
8.3 *Surgery formula* 69
8.4 *Outstanding problems* 70
8.5 *Disconnected Lie groups* 72
