Introduction	ix
---------------------------	----

Chapter I

T. Evans: Varieties of loops and quasigroups	1
I.1 Universal algebraic preliminaries	1
I.2 Free loops and quasigroups	7
I.3 Decision problems and the structure of finitely presented loops	11
I.4 Classifying loop identities and loop varieties	16
I.5 Quasigroup varieties and combinatorics	22

Chapter II

O. Chein: Examples and methods of construction	27
II.1 Introduction	27
II.2 Terminology	28
II.3 Extensions	35
II.4 Other constructions using cartesian products	43
II.5 Isotopy	51
II.6 New operations on algebraic systems	58
II.7 Miscellaneous algebraic constructions	63
II.8 Constructions arising from geometry	74
II.9 Constructions based on designs	83
II.10 Summary	90

Chapter III

J. D. H. Smith: Centrality	95
III.1 Introduction	95
III.2 Equasigroups and their congruences	95
III.3 Central congruences	98
III.4 Central isotopy	102
III.5 3-quasigroups	105
III.6 Stability congruences	110

Chapter IV

L. Bénéteau: Commutative Moufang loops and related groupoids	115
IV.1 Preliminaries	115
IV.2 Basic facts about central nilpotence and first consequences	122
IV.3 Free objects, related groups, and open problems	128

Chapter V

L. Bénéteau: Cubic hypersurface quasigroups	143
V.1 Definitions and structure theorems	143
V.2 Geometrical motivations	146

Chapter VI

M. Deza, G. Sabidussi: Combinatorial structures arising from commutative Moufang loops	151
VI.1 Introduction	151
VI.2 Matroidal background	153
VI.3 Hall systems as perfect matroid designs	154
VI.4 Erigibility	156
VI.5 Dimensions	159

Chapter VII

E. G. Goodaire, M. J. Kallaher: Systems with two binary operations, and their planes	161
VII.1 Introduction and historical background	161
VII.2 Ternary rings and their planes	162
VII.3 Quasifields	169
VII.4 Semifields	176
VII.5 Derivability	180
VII.6 Construction of cartesian groups	183
VII.7 Neofields	186
VII.8 Loop rings	189

Chapter VIII

A. Barlotti: Geometry of quasigroups	197
VIII.1 Introduction	197
VIII.2 Staudt's point of view	197
VIII.3 k -transitive and ω -transitive permutation groups	201
VIII.4 Klein's point of view in web geometry	202

Chapter IX

K. H. Hofmann, K. Strambach: Topological and analytic loops	205
IX.1 The general theory, non-specific properties	208
IX.2 The multiplication group, uniformities	217
IX.3 Special hypotheses: weak forms of associativity	223
IX.4 Geometry of topological loops	227
IX.5 Topological distributive quasigroups	229
IX.6 The Lie theory of analytic loops	234
IX.7 Topological double loops	255

Chapter X

V. V. Goldberg: Local differentiable quasigroups and webs	263
X.1 Fibrations and d -webs $W(d, n, r)$ of codimension r on a differentiable manifold X^{nr}	264
X.2 Local differentiable n -quasigroups connected with webs $W(n + 1, n, r)$	273
X.3 Local Akinis algebras of three-webs $W(3, 2, r)$	280
X.4 Canonical expansions of the equations of a local analytic quasigroup	283
X.5 One-parameter n -subquasigroups and n -subgroups of a local differentiable n -quasigroup	287
X.6 Special classes of webs and local differentiable quasigroups	289
X.7 Realizations of webs and local differentiable quasigroups	308

Chapter XI

T. Grundhöfer, H. Salzmann: Locally compact double loops and ternary fields	313
XI.1 Double loops	314
XI.2 Ternary fields	316
XI.3 Automorphism groups of ternary fields	318
XI.4 Linear ternary fields	319
XI.5 Quasifields	321
XI.6 Nearfields	327
XI.7 Division algebras, fields and alternative fields	329
XI.8 Double loops	333
XI.9 Automorphism groups	335
XI.10 Homogeneity of planes	338
XI.12 Dimension 2	347
XI.13 Dimension 4	350
XI.14 Dimension 8	353

Chapter XII

P. O. Miheev, L. V. Sabinin: Quasigroups and differential geometry	357
XII.1 Smooth universal algebras	359
XII.2 Canonical affine connections of loopuscular and geoodular structures	366
XII.3 Reductive and symmetric geoodular spaces	374
XII.4 s -Spaces	389
XII.5 Lie triple algebras	395
XII.6 Semidirect products of a quasigroup by its transassociants	398
XII.7 The infinitesimal theory of local analytic loops	405
XII.8 Smooth Bol loops	418

Chapter XIII

P. D. Gerber: LIP loops and quadratic differential equations	431
XIII.1 Introduction	431
XIII.2 Notation and general background	431
XIII.3 Quadratic systems	435
XIII.4 First degree groups	437
XIII.5 First degree LIP loops	440

Chapter XIV

F. B. Kalhoff, S. H. G. Prieß-Crampe: Ordered loops and ordered planar ternary rings	445
XIV.1 Some basic facts about ordered loops	446
XIV.2 Archimedean ordering	448
XIV.3 Chain of convex subloops and orderability of loops	451
XIV.4 Ordered double loops and ordered planar ternary rings	454
XIV.5 Archimedean planar ternary rings and double loops	458
XIV.6 Preorderings and Artin-Schreier characterization in PTRs	461
XIV.7 Spaces of orderings and Witt rings of planar ternary rings	463
