CONTENTS

Preface vii
Contents ix

Chapter I. BRAIDS AND CONFIGURATION SPACES.

1. Geometric braids 2
2. Configuration spaces of ordered finite pointsets and their fibrations 9
3. The braid group as fundamental group of a configuration space 14
4. Artin's presentation of the braid group 18
5. Representation of braids as automorphisms of free groups 25
6. The Dirac string problem 39
Exercises 46

Chapter II. BRAIDS AND LINKS.

1. Constructing links from braids 50
2. Representing link types by closed braids. A theorem of Alexander 55
3. Combinatorial equivalence of closed braids. Markov's theorem 59
4. The group of a link 66
5. Plane projections and braid representations of links 73
Exercises 79

Chapter III. POLYNOMIAL COVERING MAPS.

1. Weierstrass polynomials and the finite covering maps associated with them 82
2. The canonical n–fold polynomial covering map 86
3. Geometric characterizations of polynomial covering maps 91
4. Polynomial covering maps and homomorphisms into braid groups 97
5. Characteristic homomorphisms for finite covering maps 103
6. An algebraic classification of the polynomial covering maps 108
7. Embedding finite covering maps into bundles of manifolds 114

Exercises 118

Chapter IV. ALGEBRA AND TOPOLOGY OF WEIERSTRASS POLYNOMIALS.

1. Complete solvability of equations defined by simple Weierstrass polynomials 123
2. Primitives for extensions of rings of continuous functions 130
3. The characteristic algebra of a finite covering map 133
4. Weierstrass polynomials and characteristic algebras 139
5. Some applications of characteristic algebras 143

Exercises 151

Appendix 1: A presentation for the abstract coloured braid group (by Lars Gæde) 153

Appendix 2: Threading knot diagrams (by Hugh R. Morton), [Math. Proc. Camb. Phil. Soc. 99(1986), 247–260] 171

Bibliography 185

Index (to Chapters I–IV and Appendix 1) 189
