

CONTENTS

Chapter 1: INTRODUCTION 1

PART I

CLASSICAL MECHANICS AND QUANTUM STATES

Chapter 2:	THE DIRAC-BERGMANN THEORY OF CONSTRAINTS	
	2.1 Introduction	9
	2.2 Constraint Analysis	10
	2.3 Quantization Procedure	13
Chapter 3:	NONRELATIVISTIC PARTICLES WITH FIXED SPIN	
	3.1 Introduction	16
	3.2 The Hamiltonian Description	16
	3.3 The Lagrangian Description	18
	3.4 Gauge Properties of L_B	21
	3.5 Principal Fibre Bundles	23
	3.6 Gauge Fixing	26
	3.7 Connections in a Principal Fibre Bundle	28
	3.8 Horizontal Lifts in a Principal Fibre Bundle	35
Chapter 4:	MAGNETIC MONOPOLES	
	4.1 Introduction	38
	4.2 Equations of Motion	38
	4.3 The Hamiltonian Formalism	39
	4.4 The Lagrangian Formalism	40
	4.5 Gauge Properties of L	42
Chapter 5:	THE CANONICAL FORMALISM AND QUANTIZATION	
	5.1 Introduction	44
	5.2 Nonrelativistic Spinning Particles	46
	5.3 The "Gupta-Bleuler" Approach to Quantization	49
	5.4 Magnetic Monopoles	52

Chapter 6:	THE WESS-ZUMINO TERM AND THE PATH SPACE	
	6.1 Introduction	55
	6.2 The Charge-Monopole System	55
	6.3 Wave Functions and the Bundle \hat{Q} for a Wess-Zumino Term	61
Chapter 7:	QUANTUM SYMMETRIES AND THE WESS-ZUMINO TERM	
	7.1 Introduction	68
	7.2 The Group \hat{G}	71
	7.3 The Charge-Monopole System Revisited	76
Chapter 8:	QUANTUM THEORY FOR MULTIPLY CONNECTED CONFIGURATION SPACES	
	8.1 Introduction	80
	8.2 The Universal Covering Space and the Fundamental Group	82
	8.3 Examples of Multiply Connected Configuration Spaces	85
	8.4 Quantization on Multiply Connected Configuration Spaces	89
	8.5 Nonabelian Fundamental Groups	91
	8.6 The Case of the Asymmetric Rotor	94

PART II

TOPOLOGICAL SOLITONS AND NONLINEAR MODELS

Chapter 9:	TOPOLOGICAL SOLITONS IN ONE AND TWO DIMENSIONS	
	9.1 Introduction	99
	9.2 A Soliton in One Dimension	104
	9.3 Solitons in Two Dimensions	106

Chapter 10:	NONLINEAR MODELS AS GAUGE THEORIES	
	10.1 Introduction	122
	10.2 Examples of Nonlinear Models	125
Chapter 11:	THE CHERN-SIMONS TERM	
	11.1 Introduction	130
	11.2 The Chern-Simons Term in the 2 + 1 Dimensional Nonlinear σ -Model	135
 PART III SKYRMIONS 		
Chapter 12:	THE EFFECTIVE LAGRANGIAN FOR QCD	
	12.1 Introduction	143
	12.2 The QCD Effective Chiral Lagrangian	146
Chapter 13:	SKYRME SOLITONS FOR TWO FLAVOURS	
	13.1 Introduction	152
	13.2 The Size of the Soliton and the Skyrme Term	157
	13.3 The "Spherically Symmetric" Ansatz	160
	13.4 Semiclassical Quantization of the Skyrmion	163
Chapter 14:	PRELIMINARY DISCUSSION OF SKYRME'S PROPOSALS	
	14.1 Introduction	174
	14.2 Phenomenological Comments	175
	14.3 Electric Charge for Two Flavours	176
Chapter 15:	BARYON NUMBER AND SPIN OF THE SKYRMION	
	15.1 Introduction	179
	15.2 Winding Number is Baryon Number	180
	15.3 Skyrmion is Spinorial	184
	15.4 The Wess-Zumino Term in Collective Coordinates	188
	15.5 Canonical Quantization	193

Chapter 16:	MORE ON THE WESS-ZUMINO TERM	
	16.1 Introduction	198
	16.2 The Chiral Model in $1 + 1$ Space-Time	200
	16.3 The Chiral Model in $3 + 1$ Space-Time	203
	16.4 Reduction of the Wess-Zumino Term	204
	16.5 Electric Charges and the Wess-Zumino Term	207
	16.6 The Wess-Zumino-Novikov-Witten Model	210
Chapter 17:	A HIERARCHY OF “SPHERICALLY SYMMETRIC” ANSÄTZE	
	17.1 Introduction	217
	17.2 A General Definition of Spherical Symmetry	217
	17.3 The Dibaryon	219
	17.4 Quantization Ambiguities for Any Number of Flavours	227
Chapter 18:	SKYRMION PHENOMENOLOGY	
	18.1 Introduction	235
	18.2 Static Properties in the Two-Flavoured Model	236
	18.3 Baryon Masses in the Three-Flavoured Model	243
Chapter 19:	ELECTROWEAK SKYRMIONS	
	19.1 Introduction	250
	19.2 The GSW Theory and the Strong Coupling Limit	252
	19.3 The “Spherically Symmetric” Ansatz	257
	19.4 Semiclassical Quantization	261
	19.5 Phenomenological Properties	264

PART IV

GAUGE, GRAVITY AND STRING THEORIES

Chapter 20:	MULTIPLY CONNECTED CONFIGURATION SPACES IN GAUGE AND GRAVITY THEORIES	
	20.1 Introduction	271
	20.2 The Canonical Formalism and an Approach to “ θ States” in Gauge and Gravity Theories	272
	20.3 The Configuration Space for Nonabelian Gauge Theories	276
	20.4 The Configuration Space for Gravity Theories	279
	20.5 The Domain of Wave Functions in Gauge Theories and Gravity	280
	20.6 Comments on Observables	283
Chapter 21:	GEONS AND THEIR PROPERTIES	
	21.1 Introduction	285
	21.2 The Prime Decomposition Theorem and Gravitational Geons	286
	21.3 Spinorial States from Pure Gravity	291
Chapter 22:	STATISTICS, STRINGS AND GRAVITY	
	22.1 Introduction	296
	22.2 Statistics in a Plane	297
	22.3 Unoriented Strings	299
	22.4 Oriented Strings	306
	22.5 Quantum Gravity	307
Chapter 23:	CONCLUDING REMARKS	311
	REFERENCES	315
	INDEX	351
