

TABLE OF CONTENTS

1	Introduction	1
1.1	Basic Definitions	1
1.2	Historical Overview	2
1.3	Two Dimensional Sums	3
1.4	The method of Bombieri and Iwaniec	4
1.5	Notation	5
2	The Simplest Van Der Corput Estimates	6
2.1	Estimates Using First and Second Derivatives	6
2.2	Some Simple Inequalities	8
2.3	The Weyl-van der Corput Inequality	10
2.4	Iterating Weyl-Van der Corput	13
2.5	Upper Bounds for the Riemann Zeta-function	16
2.6	Notes	20
3	The Method of Exponent Pairs	21
3.1	Introduction	21
3.2	Lemmas on Exponential Integrals	22
3.3	Heuristic Arguments and Definitions	29
3.4	Proof of the A-Process	32
3.5	Proof of the B-Process	35
3.6	Notes	37
4	Applications of Exponent Pairs	38
4.1	The Riemann Zeta-function	38
4.2	Sums Involving ψ	39
4.3	The Dirichlet Divisor Problem	40
4.4	The Circle Problem	42
4.5	Gaps Between Squarefree Numbers	44
4.6	The Piatetski-Shapiro Prime Number Theorem	46
4.7	Notes	53
5	Computing Optimal Exponent Pairs	54
5.1	Introduction	54
5.2	Preliminary Lemmas	55
5.3	The Algorithm	57
5.4	Applications	63
5.5	Notes	69

6 Two Dimensional Exponential Sums	70
6.1 Introduction	70
6.2 Generalized Weyl-van der Corput Inequality	75
6.3 Omega Conditions	79
6.4 The AB Theorem	83
7 New Exponent Pairs	86
7.1 Introduction	86
7.2 Preliminaries	87
7.3 The Airy-Hardy Integral	90
7.4 Gauss Sums	93
7.5 Lemmas on Rational Points	96
7.6 Semicubical Powers of Integers	101
7.7 Proof of the Theorem	104
7.8 Notes	110
Appendix	111
Bibliography	117
Index	120
