## PART I ORIENTATION

1. Terms and questions	1
1.1 Orientation	1
1.2 What is the issue?	10
1.3 Sets and properties	16
2. Foundationalism and foundations of mathematics	25
2.1 Variations and metaphors	26
2.2 Foundations and psychologism	31
2.3 Two conceptions of logic	35
2.4 Marriage: Can there be harmony?	40
2.5 Divorce: Life without completeness	43
2.6 Logic and computation	49

## PART II LOGIC AND MATHEMATICS

3. Theory	61
3.1 Language	61
3.2 Deductive systems	65
3.3 Semantics	70
4. Metatheory	79
4.1 First-order theories	79
4.2 Second-order—standard semantics	80
4.3 Non-standard semantics—Henkin and first-order	88
5. Second-order logic and mathematics	96
5.1 Mathematical notions	96
5.2 First-order theories—what goes wrong	110
5.3 Second-order languages and the practice of mathematics	116
5.4 Set theory	127

<b>6. Advanced metatheory</b>	<b>134</b>
6.1 A word on semantic theory	134
6.2 Reductions	137
6.3 Reflection: small large cardinals	141
6.4 Löwenheim–Skolem analogues: large large cardinals	147
6.5 Characterizations of first-order logic	157
6.6 Definability and other odds and ends	161

### PART III HISTORY AND PHILOSOPHY

<b>7. The historical ‘triumph’ of first-order languages</b>	<b>173</b>
7.1 Introduction	173
7.2 Narrative	177
7.3 To the present	193
<b>8. Second-order logic and rule-following</b>	<b>203</b>
8.1 The regress	204
8.2 Options	208
8.3 Rules and logic	210
<b>9. The competition</b>	<b>220</b>
9.1 Other logics	220
9.2 Free relation variables	246
9.3 First-order set theory	250
<b>References</b>	<b>263</b>
<b>Index</b>	<b>273</b>
