<i>Preface</i>	vii
<i>Notes to the reader</i>	ix
<i>Introduction</i>	xi
1 Fields with valuations	
1.1 Absolute values	1
1.2 The topology defined by an absolute value	6
1.3 Complete fields	11
1.4 Valuations, valuation rings and places	18
1.5 The representation by power series	27
1.6 Ordered groups	31
1.7 General valuations	37
2 Extensions	
2.1 Generalities on extensions	43
2.2 Extensions of complete fields	46
2.3 Extensions of incomplete fields	54
2.4 Dedekind domains and the strong approximation theorem	58
2.5 Extensions of Dedekind domains	67
2.6 Different and discriminant	72
3 Global fields	
3.1 Algebraic number fields	83
3.2 The product formula	91
3.3 The unit theorem	100
3.4 The class number	106
4 Function fields	
4.1 Divisors on a function field	109
4.2 Principal divisors and the divisor class group	118
4.3 Riemann's theorem and the specialty index	125

vi Contents

4.4	The genus	129
4.5	Derivations and differentials	135
4.6	The Riemann–Roch theorem and its consequences	144
4.7	Elliptic function fields	155
4.8	Abelian integrals and the Abel–Jacobi theorem	167
5	Algebraic function fields in two variables	
5.1	Valuations on function fields of two variables	176
	<i>Bibliography</i>	183
	<i>Table of notations</i>	187
	<i>Index</i>	189
