

CONTENTS

<i>Preface</i>	ix
Introduction	1
0.1 Infima and Suprema	2
0.2 Limits	4
0.3 The 'Diagonal' Principle of Choice	8
Notes	9
Chapter 1 Functions of Bounded Variation	10
1.1 Monotone Functions	10
1.2 Sequences of Monotone Functions	12
1.3 The Variation of a Function	14
The Relationship with Arc-length	17
1.4 Jordan Canonical Decomposition	18
1.5 The Riemann–Stieltjes Integral. Existence Criteria	20
1.6 Properties of the Integral	26
Taking the Limit under the Integral Sign	29
Notes	30
Chapter 2 Approximation of Continuous Functions by Polynomials	31
2.1 Weierstrass' Theorem	31
2.2 Tonelli Polynomials	31
2.3 Bernstein Polynomials	33
Application to Absolutely Monotone Functions	35
2.4 The Stone–Weierstrass Theorem	39
Notes	43
Chapter 3 Functions on Metric Spaces	45
3.1 Continuous Functions	45
Uniform and Continuous Convergence	47
3.2 Equicontinuous Families of Functions	49
3.3 Semicontinuous Functions	51
3.4 Maximum and Minimum at a Point	55
3.5 Functions of the First Class of Baire	57
Notes	64

Chapter 4 Algebras of Sets and Measurable Functions	65
4.1 Algebras of Sets	65
4.2 Cartesian Products	68
4.3 Borel Sets	69
Classification of Borel Sets	71
4.4 Measurable Functions	73
4.5 Baire Functions	78
Notes	80
Chapter 5 Measure and Measurable Functions	81
5.1 Measure	81
Sets of Measure Zero	82
5.2 Outer Measure	85
Outer Measure on a Countably Additive Ideal	91
Extension of a Finitely Additive Function to a Measure	91
5.3 Content of an Interval	92
5.4 Lebesgue Measure	96
A Characterization of the Modulus of a Determinant	104
Non-Measurable Sets	107
5.5 Measurable Functions	108
\mathcal{L}_n -measurable Functions	109
5.6 Sequences of Measurable Functions	111
Notes	115
Chapter 6 Integration	117
6.1 Integration of Non-negative Functions	117
The Banach–Vitali Theorem	123
6.2 Integration of Functions of Arbitrary Sign. Summability	124
Lebesgue Sums	130
Relationship of Lebesgue Measure and Integral with the Riemann Integral	130
6.3 Cartesian Product of Measures. Fubini's Theorem	132
The case of Lebesgue Measure and Integrals	136
6.4 Riesz's Theorem	139
Proof of Riesz's Theorem	140
Uniqueness of Measure in Riesz's Theorem	142
Notes	143
Chapter 7 Differentiation	145
7.1 Differentiability Almost Everywhere	145
Rademacher's Theorem	152
7.2 Interval Functions of Bounded Variation	156
7.3 Absolutely Continuous Interval Functions	160
7.4 The case of Functions of a Single Variable	163
Arc Length	170
Dini Derivatives	172
Non-differentiable Continuous Functions	176
7.5 Countably Additive Set Functions	178
Riesz's Theorem	183

	Connection with Interval Functions	185
	Lebesgue–Stieltjes Integral	190
7.6	The Radon–Nikodym Theorem	192
	Change of Variable in a Lebesgue Integral	199
	Notes	201
<i>Appendix 1</i>	Another Proof of Lebesgue’s Theorem on the Differentiability of the Integral	204
<i>Appendix 2</i>	Another Proof of Fubini’s Theorem for Lebesgue Integrals	205
<i>Appendix 3</i>	Stepanov’s Theorem on Differentiability Almost Everywhere	208
<i>Appendix 4</i>	Proofs of the Sierpiński–Young and Denjoy–Young–Saks Theorems	210
<i>Exercises</i>	(Compiled by M. Kosiek, W. Mlak and Z. Opial.)	211
<i>Bibliography</i>		226
<i>Subject Index</i>		227
