

TABLE OF CONTENTS

1.	INVARIANTS OF COMPLETE INTERSECTIONS	1
1.1.	The fundamental exact sequence	1
1.2.	Vanishing cycles and thimbles	5
1.3.	Monodromy groups and vanishing lattices	8
1.4.	Geometric bases	11
1.5.	Dynkin diagrams	13
1.6.	Relative monodromy	17
2.	COMPUTATION OF DYNKIN DIAGRAMS	21
2.1.	Polar curves	21
2.2.	A generalization of a method of Gabrielov	24
2.3.	Dynkin diagrams of an intersection of two quadrics	35
2.4.	Extended affine root systems	47
2.5.	A generalization of a method of Lazzeri	50
3.	DYNKIN DIAGRAMS FOR SOME SPECIAL SINGULARITIES	67
3.1.	On the classification of isolated singularities of complete intersections	67
3.2.	The singularities $T_2^n, q, 2, s$	71
3.3.	The $J^{(n-1)}$ - and $K^{(n-1)}$ -series	81
3.4.	Simple space curves	93
3.5.	Surfaces of complete intersection	100
3.6.	Strange duality	106
4.	MILNOR LATTICES AND MONODROMY GROUPS	117
4.1.	A description of the monodromy groups and vanishing lattices	117
4.2.	Reduction to algebraic results	123
4.3.	Global monodromy groups and Lefschetz pencils	127

5.	MONODROMY GROUPS OF SYMMETRIC VANISHING LATTICES	131
5.1.	Units of lattices	131
5.2.	Symmetric vanishing lattices	133
5.3.	Complete vanishing lattices	135
5.4.	Special subsets	138
5.5.	Hyperbolic Coxeter systems	142
	BIBLIOGRAPHY	145
