

Table of Contents

<u>Chapter</u>	<u>Page</u>
I. Siegel's Lemmas and Heights	1
1. Siegel's Lemma	1
2. Geometry of Numbers	3
3. Lattice Packings	7
4. Siegel's Lemma Again	9
5. Grassman Algebra	11
6. Absolute Values	18
7. Heights in Number Fields	22
8. Heights of Subspaces	28
9. Another Version of Siegel's Lemma	32
II. Diophantine Approximation	34
1. Dirichlet's Theorem and Liouville's Theorem	34
2. Roth's Theorem	38
3. Construction of a Polynomial	42
4. Upper Bounds for the Index	45
5. Estimation of Volumes	48
6. A Version of Roth's Theorem	49
7. Proof of the Main Theorems	52
8. Counting Good Rational Approximations	57
9. The Number of Good Approximations to Algebraic Numbers	63
10. A Generalization of Roth's Theorem	69
III. The Thue Equation	73
1. Main Result	73
2. Preliminaries	76
3. More on the connection between Thue's Equation and Diophantine Approximation	83
4. Large Solutions	85
5. Small Solutions	86
6. How to Go From $F(x) = 1$ to $F(x) = m$	91
7. Thue Equations with Few Coefficients	99
8. The Distribution of the Roots of Sparse Polynomials	100
9. The Angular Distribution of Roots	106
10. On Trinomials	111
11. Roots of f close to $\frac{x}{y}$	116
12. Proof of 7A	119
13. Generalizations of the Thue Equation	124

Table of Contents (cont.)

<u>Chapter</u>	<u>Page</u>
IV. <i>S</i> -unit Equations and Hyperelliptic Equations	127
1. <i>S</i> -unit Equations and Hyperelliptic Equations	127
2. Evertse's Bound	129
3. More on <i>S</i> -unit Equations	134
4. Elliptic, Hyperelliptic, and Superelliptic Equations	137
5. The Number of Solutions of Elliptic, Hyperelliptic, and Superelliptic Equations	142
6. On Elliptic Curves	147
7. The Rank of Cubic Thue Curves	159
8. Lower Bounds for the Number of Solutions of Cubic Thue Equations ..	163
9. Upper Bounds for Rational Points on Certain Elliptic Equations in terms of the Mordell-Weil Rank	165
10. Isogenies	169
11. Upper Bounds on Cubic Thue Equations in Terms of the Mordell-Weil Rank	173
12. More General Results	175
V. Diophantine Equations in More Than Two Variables	176
1. The Subspace Theorem	176
2. Generalized <i>S</i> -unit Equations	180
3. Norm Form Equations	182
4. A Reduction	186
5. An Application of the Geometry of Numbers	188
6. Products of Linear Forms	192
7. A Generalized Gap Principle	193
8. Small Solutions	199
9. Large Solutions	200
10. Proof of Theorem 3B	203
Epilogue. The <i>abc</i> -conjecture	205
Bibliography	209
Index of Symbols	216
