	<i>Preface</i>	<i>vii</i>
<i>1</i>	<i>General Measure Theory</i>	<i>1</i>
1.1	Measures and measurable functions	1
1.2	Lusin's and Egoroff's Theorems	13
1.3	Integrals and limit theorems	17
1.4	Product measures, Fubini's Theorem, Lebesgue measure	22
1.5	Covering theorems	26
1.6	Differentiation of Radon measures	37
1.7	Lebesgue points; Approximate continuity	43
1.8	Riesz Representation Theorem	49
1.9	Weak convergence and compactness for Radon measures	54
<i>2</i>	<i>Hausdorff Measure</i>	<i>60</i>
2.1	Definitions and elementary properties; Hausdorff dimension	60
2.2	Isodiametric Inequality; $\mathcal{H}^n = \mathcal{L}^n$	65
2.3	Densities	71
2.4	Hausdorff measure and elementary properties of functions	75
<i>3</i>	<i>Area and Coarea Formulas</i>	<i>79</i>
3.1	Lipschitz functions, Rademacher's Theorem	79
3.2	Linear maps and Jacobians	86
3.3	The Area Formula	92
3.4	The Coarea Formula	104

4	<i>Sobolev Functions</i>	120
4.1	Definitions and elementary properties	120
4.2	Approximation	122
4.3	Traces	133
4.4	Extensions	135
4.5	Sobolev inequalities	138
4.6	Compactness	144
4.7	Capacity	146
4.8	Quasicontinuity; Precise representatives of Sobolev functions	158
4.9	Differentiability on lines	162
5	<i>BV Functions and Sets of Finite Perimeter</i>	166
5.1	Definitions; Structure Theorem	166
5.2	Approximation and compactness	172
5.3	Traces	176
5.4	Extensions	183
5.5	Coarea Formula for BV functions	185
5.6	Isoperimetric Inequalities	189
5.7	The reduced boundary	194
5.8	The measure theoretic boundary; Gauss–Green Theorem	208
5.9	Pointwise properties of BV functions	209
5.10	Essential variation on lines	216
5.11	A criterion for finite perimeter	221
6	<i>Differentiability and Approximation by C^1 Functions</i>	227
6.1	L^p differentiability; Approximate differentiability	227
6.2	Differentiability a.e. for $W^{1,p}$ ($p > n$)	234
6.3	Convex functions	236
6.4	Second derivatives a.e. for convex functions	241
6.5	Whitney's Extension Theorem	245
6.6	Approximation by C^1 functions	251
	<i>Bibliography</i>	257
	<i>Notation</i>	261
	<i>Index</i>	267
