DETAILED TABLE OF CONTENTS

| | |
|---------------------------------------------------------------------------------|----|
| General Introduction | 15 |
| <i>Chapter 1</i> | |
| Technological Innovation: Some Definitions and Building Blocks | 23 |
| Abstract | 23 |
| Introduction | 24 |
| 1. Innovation as a process | 24 |
| An interactive model of the innovation process | 24 |
| The length and costs of the innovation process | 28 |
| 2. The production of scientific and technical knowledge | 30 |
| The central role played by firms: industrial R&D | 30 |
| The funding of long-term basic research and its institutional foundations | 33 |
| Transfer sciences | 35 |
| 3. Continuities and discontinuities in technology | 38 |
| The cumulative features of scientific and technical knowledge | 38 |
| The notions of technological paradigms and trajectories | 39 |
| Competition between technologies and increasing returns to adoption | 40 |
| 4. Some policy conclusions | 42 |
| Industrial R&D | 42 |
| Long-term research | 42 |
| Institutions, equilibria and interactions | 43 |
| Notes | 44 |
| <i>Chapter 2</i> | |
| Technology Diffusion | 47 |
| Abstract | 47 |
| Introduction | 48 |
| 1. The spread of knowledge: disembodied technology diffusion | 49 |
| Actors and mechanisms | 49 |
| Research spillovers | 50 |
| Absorptive capacity | 51 |
| Factors influencing the efficiency of disembodied technology diffusion | 52 |
| 2. Equipment-embodied technology diffusion | 53 |
| Actors and mechanisms | 53 |
| Market structure and a different concept of spillover | 55 |
| The role of investment and timing in adoption | 55 |
| Systemic characteristics of technologies as factors in adoption | 57 |
| The diffusion of consumer products | 58 |
| 3. The economic importance of technology diffusion | 59 |
| Social and private rates of return to innovation | 59 |
| Technology diffusion and productivity transfer | 59 |
| Diffusion and the incentives to innovate | 60 |
| 4. Some policy conclusions | 61 |
| Policies related to the spillover phenomenon | 61 |
| Policies related to the development of absorptive capacity | 62 |
| Notes | 64 |

Chapter 3

| | |
|----------------------------------------------------------------------------------------|----|
| Innovation-Related Networks and Technology Policymaking | 67 |
| Abstract | 67 |
| Introduction | 68 |
| 1. Sectoral evidence of innovation-related network linkages | 69 |
| Networking among scientists and engineers | 70 |
| From informal to formal networks: university-industry relations in the 1980s | 71 |
| Inter-firm technology-related agreements as networks | 72 |
| User-producer relationships between firms | 76 |
| The overall picture: a maze of overlapping networks | 77 |
| 2. Networks: some theoretical and practical considerations | 77 |
| Network transactions in relation to markets and hierarchies | 77 |
| Some conditions for exercising “network preferences” | 78 |
| 3. The morphology of networks and national systems of innovation | 80 |
| Concepts and indicators for the analysis of innovation-related networks | 81 |
| Innovation-related networks and national systems of innovation | 83 |
| 4. Some policy conclusions | 84 |
| Co-operation and its implications | 84 |
| Network creation and management in science and technology policy | 85 |
| Supplying network externalities | 85 |
| Notes | 86 |

Chapter 4

| | |
|--------------------------------------------------------------------------------------|-----|
| Technology and Corporate Organisation | 89 |
| Abstract | 89 |
| Introduction | 90 |
| 1. Towards a new management paradigm for large firms | 90 |
| Fordism and its limits | 92 |
| The emergence of toyotism | 94 |
| The organisation of manufacturing and approaches to labour management | 95 |
| 2. The emergence of the network form of corporate organisation | 100 |
| The network firm: a traditional Japanese institution | 100 |
| Changes made in corporate organisation by multinational enterprises (MNEs) | 102 |
| Building network firms from the ground up: some Italian examples | 104 |
| New style multinational enterprises and further Japanese developments | 105 |
| 3. The challenges and problems facing small firms | 107 |
| New technology and the advantages and disadvantages of small size | 107 |
| Different settings for the activities of SMEs | 108 |
| Small firms and large firms | 108 |
| Public support for SMEs | 109 |
| 4. Some policy conclusions | 110 |
| Notes | 111 |

Chapter 5

| | |
|-----------------------------------------------------------------------------|-----|
| The Growth and Management of Intangible Investment | 113 |
| Abstract | 113 |
| Introduction | 114 |
| 1. Towards a broader definition of investment | 114 |
| 2. Investment in intangibles: structure and links with innovation | 117 |
| 3. Complementarities between intangible and physical investment | 119 |
| 4. Investment in intangibles: general trends | 121 |
| 5. The evolution of investments in various intangibles | 123 |
| Research and development | 123 |
| International technology licensing and purchase | 127 |
| Investment in firm-based training and skill formation | 127 |
| Organisational change | 130 |
| Marketing | 130 |
| Software | 130 |

| | |
|--------------------------------------|-----|
| 6. Some policy conclusions | 132 |
| Notes | 134 |

Chapter 6

| | |
|---------------------------------------------------------------------------------------------------------|------------|
| The Supply of Scientists and Engineers: Current Trends and Concerns | 135 |
| Abstract | 135 |
| Introduction | 136 |
| 1. Higher education, the main source of scientists and engineers | 136 |
| Overall higher education enrolments | 136 |
| Enrolments in science and engineering studies | 138 |
| The participation of women, mature students and minorities in science and engineering studies | 138 |
| The quality of pre-higher education | 139 |
| 2. Other factors affecting the supply of scientists and engineers | 139 |
| Inter-profession mobility | 139 |
| International mobility | 143 |
| 3. The demand for scientists and engineers | 144 |
| The fundamental difficulty of forecasting demand | 144 |
| The anticipated increase in demand for scientists and engineers | 145 |
| Special higher education problems | 146 |
| 4. Some policy conclusions | 148 |

Chapter 7

| | |
|---------------------------------------------------------------------------------|------------|
| Human Resources and New Technologies in the Production System | 149 |
| Abstract | 149 |
| Introduction | 150 |
| 1. Changes in the demand for human resources | 151 |
| Overall changes: the increasing importance of the service sector | 151 |
| Changes in skill requirements at the level of the firm | 152 |
| 2. Educational attainment and the providers of education and training | 155 |
| Competence levels of the work force | 155 |
| Public and private providers of education and training | 157 |
| 3. Responses from the educational sector | 159 |
| Schooling as preparation for work | 159 |
| The curriculum and the teaching/learning process | 159 |
| The involvement of higher education | 161 |
| 4. Mismatches and the interaction between demand and supply | 161 |
| The nature and scale of mismatches | 161 |
| Interaction between supply and demand | 162 |
| 5. Some policy conclusions | 163 |
| Emerging policy issues on the supply side | 163 |
| Policy for the demand side | 165 |
| The pressing need for further data | 165 |
| Notes | 166 |

Chapter 8

| | |
|----------------------------------------------------------------|------------|
| Technology and Economic Growth | 167 |
| Abstract | 167 |
| Introduction | 168 |
| 1. Investment and productivity growth | 169 |
| Embodiment effects | 169 |
| “New” growth theories | 172 |
| 2. Productivity performance in OECD economies | 175 |
| The productivity slowdown of the 1970s | 175 |
| Productivity performance in the 1980s | 176 |
| The special case of the service sector | 177 |
| 3. Measurement issues | 179 |
| 4. Prospects for future TFP growth and policy issues | 182 |
| Macro-economic factors | 182 |

| | |
|--------------------------------------------------------------------------------------------------|-----|
| Structural adjustments | 183 |
| 5. Conclusion | 184 |
| Notes | 185 |
| <i>Chapter 9</i> | |
| Technology and the Environment | 187 |
| Abstract | 187 |
| Introduction | 188 |
| 1. The legacy of pollution-prone technologies and some economic issues | 189 |
| 2. National environmental policies in OECD countries | 192 |
| 3. Issues relating to the level and structures of environmental R&D | 194 |
| Trends in government funding of environmental R&D | 194 |
| Common trends in environment research policies | 195 |
| Reducing risk and uncertainty | 195 |
| Industrial R&D and the “environment industry” | 197 |
| 4. Progress in environmental protection through end-of-pipe pollution control technologies | 198 |
| 5. Critical issues in policymaking | 201 |
| The increasing complexity of the challenges | 201 |
| The cost of effective environmental policies | 203 |
| Targeting environmentally friendly technologies | 205 |
| 6. Some policy conclusions | 206 |
| Notes | 208 |
| <i>Chapter 10</i> | |
| Technology and Globalisation | 209 |
| Abstract | 209 |
| Introduction | 210 |
| 1. Towards a clarification of the term “globalisation” | 210 |
| Factors accounting for internationalisation | 211 |
| Phases in the process of internationalisation | 212 |
| FDI, mergers and acquisitions | 213 |
| FDI and internationalisation in services | 217 |
| The role of MNEs in world trade and intra-firm trade | 219 |
| The new forms of international supply structure | 221 |
| 2. Some effects of globalisation on the location and organisation of innovation | 224 |
| Internationalised R&D and the world-wide sourcing of scientific knowledge | 224 |
| Patenting in the United States by MNEs and the Pavitt-Patel arguments | 225 |
| Inter-firm technological alliances in the setting of globalisation | 226 |
| Inter-firm agreements, technological capacities and small country issues | 232 |
| 3. Some policy conclusions | 233 |
| The exclusion of developing countries from the globalisation process | 223 |
| Globalisation and national systems of innovation | 223 |
| Globalisation and concentrated international supply structures | 234 |
| Government support to domestic firms engaged in global competition | 234 |
| Standards in the context of globalisation | 235 |
| Notes | 236 |
| <i>Chapter 11</i> | |
| Technology and Competitiveness | 237 |
| Abstract | 237 |
| Introduction | 238 |
| 1. The notion of competitiveness: analytical problems and approaches | 238 |
| Micro-economic or firm-level competitiveness | 239 |
| Competitiveness in a macro-economic context | 240 |
| National environments and structural competitiveness | 241 |
| 2. Further dimensions of structural competitiveness | 244 |
| The micro-structures of capital markets | 244 |

| | |
|------------------------------------------------------------------------------------------------------|------------|
| Military R&D and competitiveness | 246 |
| Competitiveness and services | 246 |
| 3. Technology, competitiveness and trade | 248 |
| The organisation of production as the starting point for trade analysis | 248 |
| Orthodox trade theory and technology | 249 |
| Technology gap trade theory | 249 |
| Dynamic growth efficiencies and absolute competitive advantages | 250 |
| 4. Competitiveness, globalisation and sites | 252 |
| The status of MNE affiliates and national technological capabilities | 252 |
| Building competitive advantage from local endowments | 253 |
| 5. Some policy conclusions | 254 |
| Notes | 255 |
| <i>Chapter 12</i> | |
| New Technology, Latecomer Industrialisation and Development | 257 |
| Abstract | 257 |
| Introduction | 258 |
| 1. Some major trends in investment and technology transfer | 258 |
| Basic shifts in international investment patterns | 258 |
| Other channels for the transfer of technology | 260 |
| 2. Technological capabilities and latecomer industrialisation | 260 |
| Conventional wisdom about growth in the NIEs | 261 |
| Beyond conventional wisdom: the role of technological capabilities | 262 |
| Firms' technological capabilities in NIEs | 263 |
| The role of the state and structural influences on the formation of technological capabilities | 266 |
| 3. Information technology and the newly industrialised economies | 268 |
| Adaptation and diffusion of advanced manufacturing technologies | 268 |
| NIEs as exporters of IT-intensive products | 270 |
| Prospects for the second-tier Asian NIEs | 273 |
| 4. Information technology and other developing countries | 275 |
| External constraints on the adjustment process | 275 |
| The persistence of internal constraints | 276 |
| Towards a user-oriented strategy for technology diffusion | 278 |
| 5. Situation and special needs of least developed countries | 280 |
| Notes | 282 |
| <i>Annex:</i> | |
| Consequences of the TEP for the Development of Indicators | 283 |
| 1. Introduction | 283 |
| 2. Some initial terminology | 283 |
| 3. General aspects of indicators work | 283 |
| Users and their needs | 285 |
| Producers and their activities | 286 |
| The need for a combined approach | 288 |
| 4. Unifying TEP issues | 290 |
| Integrating science and technology | 290 |
| A wider view of technology | 291 |
| The level of analysis | 292 |
| The role of government | 294 |
| Quantity, quality and complexity | 294 |
| Human resource development | 294 |
| Special areas | 295 |
| 5. Fact Sheets | 295 |
| 1. Research and development statistics | 296 |
| 2. Patent statistics | 297 |
| 3. The technology balance of payments (TBP) | 298 |
| 4. Bibliometrics | 299 |
| 5. High-technology products and industry | 300 |
| 6. Innovation statistics | 301 |

| | | |
|-------|------------------------------------------------------------------|-----|
| 7. | Measuring the use of advanced manufacturing technology | 302 |
| 8. | Science and engineering personnel | 303 |
| 9. | Education statistics and indicators | 304 |
| 10. | Training statistics | 305 |
| 11. | Structural statistics and indicators | 306 |
| 12. | Short-term industrial indicators | 307 |
| 13. | The OECD's subsidies and structural adjustment project | 308 |
| 14. | Foreign direct investment | 309 |
| 15. | Environmental indicators | 310 |
| Notes | | 311 |
