

CONTENTS

Series Editor's Introduction v

1. Introduction 1

- Analysis of a Two-Way Table 3
- Chi-Squared as a Goodness-of-Fit Test 5
- Measuring the Effects of Predictors 6

2. Logit Models: Theoretical Background 7

- The Loglinear Model for Two-Way Tables 7
- The Loglinear Model for Three-Way Tables 15
- The Logit Model for a Three-Way Table 18
- Parameter Interpretation in Terms of Odds Ratios 23
- Pairwise Comparisons of Odds 24
- Predictive Efficacy 26

3. Logit Models for Multidimensional Tables 28

- Model Fitting 29
- Interpretation of First-Order Interaction 33
- Modeling Ordinal Predictors 37
- Sample Size Considerations 41

4. Logistic Regression 42

- Logistic Regression for a Binary Response 43
- The Model 44
- Estimation Via Maximum Likelihood 45
- Logistic Regression for Cities Data 46
- Predictive Efficacy in Logistic Regression 53
- Evaluating the Effects of Intervening Variables 56

5. Advanced Topics in Logistic Regression 60

- Polytomous Logistic Regression 61
- Ordered Logit Modeling 71
- Concluding Comments 78

Appendix: Computer Routines for Chapters 2-5 79
