

# Contents

<b>Introduction: Causality Principle, Deterministic Laws and Chaos</b>	<b>1</b>
<b>8 Recursive Structures: Growing of Fractals and Plants</b>	<b>9</b>
8.1 L-Systems: A Language For Modeling Growth . . . . .	13
8.2 Growing Classical Fractals with MRCMs . . . . .	21
8.3 Turtle Graphics: Graphical Interpretation of L-Systems . . . . .	34
8.4 Growing Classical Fractals with L-Systems . . . . .	38
8.5 Growing Fractals with Networked MRCMs . . . . .	51
8.6 L-System Trees and Bushes . . . . .	57
8.7 Program of the Chapter: L-systems . . . . .	62
<b>9 Pascal's Triangle: Cellular Automata and Attractors</b>	<b>67</b>
9.1 Cellular Automata . . . . .	72
9.2 Binomial Coefficients and Divisibility . . . . .	85
9.3 IFS: From Local Divisibility to Global Geometry . . . . .	97
9.4 Catalytic Converters or how many Cells are Black? . . . . .	110
9.5 Program of the Chapter: Cellular Automata . . . . .	113
<b>10 Deterministic Chaos: Sensitivity, Mixing, and Periodic Points</b>	<b>117</b>
10.1 The Signs of Chaos: Sensitivity . . . . .	119
10.2 The Signs of Chaos: Mixing and Periodic Points . . . . .	132
10.3 Ergodic Orbits and Histograms . . . . .	138
10.4 Paradigm of Chaos: The Kneading of Dough . . . . .	148
10.5 Analysis of Chaos: Sensitivity, Mixing, and Periodic Points . . . . .	164
10.6 Chaos for the Quadratic Iterator . . . . .	175
10.7 Numerics of Chaos: Worth the Trouble or Not? . . . . .	184
10.8 Program of the Chapter: Time Series and Error Development . . . . .	191
<b>11 Order and Chaos: Period-Doubling and its Chaotic Mirror</b>	<b>195</b>
11.1 The First Step From Order to Chaos: Stable Fixed Points . . . . .	202
11.2 The Next Step From Order to Chaos: The Period Doubling Scenario . . . . .	214
11.3 The Feigenbaum Point: Entrance to Chaos . . . . .	231
11.4 From Chaos to Order: a Mirror Image . . . . .	240
11.5 Intermittency and Crises: The Backdoors to Chaos . . . . .	253
11.6 Program of the Chapter: Final State Diagram . . . . .	265

<b>12 Strange Attractors: The Locus of Chaos</b>	<b>269</b>
12.1 A Discrete Dynamical System in Two Dimensions: Hénon's Attractor . . . .	274
12.2 Continuous Dynamical Systems: Differential Equations . . . . .	295
12.3 The Rössler Attractor . . . . .	304
12.4 The Lorenz Attractor . . . . .	315
12.5 The Reconstruction of Strange Attractors . . . . .	328
12.6 Fractal Basin Boundaries . . . . .	338
12.7 Program of the Chapter: Rössler Attractor . . . . .	348
<b>13 Julia Sets: Fractal Basin Boundaries</b>	<b>351</b>
13.1 Julia Sets as Basin Boundaries . . . . .	353
13.2 Complex Numbers — A Short Introduction . . . . .	359
13.3 Complex Square Roots and Quadratic Equations . . . . .	367
13.4 Prisoners versus Escapees . . . . .	372
13.5 Equipotentials and Field Lines for Julia Sets . . . . .	384
13.6 Chaos Game and Self-Similarity for Julia Sets . . . . .	397
13.7 The Critical Point and Julia Sets as Cantor Sets . . . . .	403
13.8 Quaternion Julia Sets . . . . .	411
13.9 Program of the Chapter: Julia Sets . . . . .	413
<b>14 The Mandelbrot Set: Ordering the Julia Sets</b>	<b>415</b>
14.1 From the Structural Dichotomy to the Potential Function . . . . .	417
14.2 The Mandelbrot Set — A Road Map for Julia Sets . . . . .	427
14.3 The Mandelbrot Set as a Table of Content . . . . .	449
14.4 Program of the Chapter: The Mandelbrot Set . . . . .	467
<b>Bibliography</b>	<b>475</b>
<b>Index</b>	<b>489</b>
