Preface	xi
Introduction	xiii
Chapter 0. Background Material	1
Introduction	1
0.1. Invariant measures on homogeneous spaces	1
0.2. The structure of reductive Lie algebras	4
0.3. The structure of compact Lie groups	6
0.4. The universal enveloping algebra of a Lie algebra	8
0.5. Some basic representation theory	10
0.6. Modules over the universal enveloping algebra	13
Chapter 1. Elementary Representation Theory	17
Introduction	17
1.1. General properties of representations	18
1.2. Schur's lemma	20
1.3. Square integrable representations	22
1.4. Basic representation theory of compact \mathfrak{g} groups	24
1.5. A class of induced representations	29
1.6. C^∞ vectors and analytic vectors	31
1.7. Representations of compact Lie groups	35
1.8. Further results and comments	39

Chapter 2. Real Reductive Groups	41
Introduction	41
2.1. The definition of a real reductive group	42
2.2. Parabolic pairs	48
2.3. Cartan subgroups	56
2.4. Integration formulas	60
2.5. The Weyl character formula	65
2.A. Appendices to Chapter 2	68
2.A.1. Some linear algebra	68
2.A.2. Norms on real reductive groups	70
Chapter 3. The Basic Theory of (\mathfrak{g}, K)-Modules	73
Introduction	73
3.1. The Chevalley restriction theorem	74
3.2. The Harish-Chandra isomorphism of the center of the universal enveloping algebra	77
3.3. (\mathfrak{g}, K) -modules	80
3.4. A basic theorem of Harish-Chandra	82
3.5. The subquotient theorem	86
3.6. The spherical principal series	92
3.7. A Lemma of Osborne	95
3.8. The subrepresentation theorem	97
3.9. Notes and further results	100
3.A. Appendices to Chapter 3	103
3.A.1. Some associative algebra	103
3.A.2. A Lemma of Harish-Chandra	104
Chapter 4. The Asymptotic Behavior of Matrix Coefficients	107
Introduction	107
4.1. The Jacquet module of an admissible (\mathfrak{g}, K) -module	108
4.2. Three applications of the Jacquet module	112
4.3. Asymptotic behavior of matrix coefficients	114
4.4. Asymptotic expansions of matrix coefficients	118
4.5. Harish-Chandra's Ξ -function	125
4.6. Notes and further results	130
4.A. Appendices to Chapter 4	131
4.A.1. Asymptotic expansions	131
4.A.2. Some inequalities	133

Chapter 5. The Langlands Classification	137
Introduction	137
5.1. Tempered (\mathfrak{g}, K) -modules	138
5.2. The principal series	140
5.3. The intertwining integrals	144
5.4. The Langlands classification	149
5.5. Some applications of the classification	152
5.6. $SL(2, \mathbf{R})$	156
5.7. $SL(2, \mathbf{C})$	159
5.8. Notes and further results	163
5.A. Appendices to Chapter 5	164
5.A.1. A Lemma of Langlands	164
5.A.2. An <i>a priori</i> estimate	166
5.A.3. Square integrability and the polar decomposition	168
Chapter 6. A Construction of the Fundamental Series	173
Introduction	173
6.1. Relative Lie algebra cohomology	174
6.2. A construction of (\mathfrak{k}, K) -modules	176
6.3. The Zuckerman functors	179
6.4. Some vanishing theorems	184
6.5. Blattner type formulas	188
6.6. Irreducibility	193
6.7. Unitarizability	196
6.8. Temperedness and square integrability	201
6.9. The case of disconnected G	203
6.10. Notes and further results	206
6.A. Appendices to Chapter 6	207
6.A.1. Some homological algebra	207
6.A.2. Partition functions	211
6.A.3. Tensor products with finite dimensional representations	212
6.A.4. Infinitesimally unitary modules	220
Chapter 7. Cusp Forms on G	225
Introduction	225
7.1. Some Fréchet spaces of functions on G	226
7.2. The Harish-Chandra transform	230
7.3. Orbital integrals on a reductive Lie algebra	234

7.4.	Orbital integral on a reductive Lie group	243
7.5.	The orbital integrals of cusp forms	250
7.6.	Harmonic analysis on the space of cusp forms	254
7.7.	Square integrable representations revisited	259
7.8.	Notes and further results	264
7.A.	Appendices to Chapter 7	265
7.A.1.	Some linear algebra	265
7.A.2.	Radial components on the Lie algebra	268
7.A.3.	Radial components on the Lie group	273
7.A.4.	Some harmonic analysis on Tori	277
7.A.5.	Fundamental solutions of certain differential operators	282
Chapter 8.	Character Theory	289
	Introduction	289
8.1.	The character of an admissible representation	290
8.2.	The K -character of a (\mathfrak{g}, K) -module	294
8.3.	Harish-Chandra's regularity theorem on the Lie algebra	296
8.4.	Harish-Chandra's regularity theorem on the Lie group	311
8.5.	Tempered invariant $Z(\mathfrak{g})$ -finite distributions on G	313
8.6.	Harish-Chandra's basic inequality	320
8.7.	The completeness of the π_r	323
8.A.	Appendices to Chapter 8	326
8.A.1.	Trace class operators	326
8.A.2.	Some operations on distributions	331
8.A.3.	The radial component revisited	337
8.A.4.	The orbit structure on a real reductive Lie algebra	342
8.A.5.	Some technical results for Harish-Chandra's regularity theorem	349
Chapter 9.	Unitary Representations and (\mathfrak{g}, K)-Cohomology	353
	Introduction	353
9.1.	Tensor products of finite dimensional representations	354
9.2.	Spinors	359
9.3.	The Dirac operator	365
9.4.	(\mathfrak{g}, K) -cohomology	368
9.5.	Some results of Kumaresan, Parthasarathy, Vogan, Zuckerman	373
9.6.	u -cohomology	381
9.7.	A theorem of Vogan-Zuckerman	388

Contents	xi
9.8. Further results	394
9.A. Appendices to Chapter 9	396
9.A.1. Weyl groups	396
9.A.2. Spectral sequences	398
Bibliography	403
Index	411
