Preface <i>by David Boyd</i>	xi
Introduction	xiii

Chapter 1 Rational series

1.1 Algebraic criteria of rationality	1
1.2 Criteria of rationality in \mathbf{C}	5
1.3 Generalized Fatou's lemma	15
Notes	16
References	17

Chapter 2 Compact families of rational functions

2.1 Properties of formal series with rational coefficients	19
2.2 Compact families of rational functions	21
Notes	25
References	25

Chapter 3 Meromorphic functions on $D(0,1)$. Generalized Schur algorithm

3.0 Notation	27
3.1 Properties of Schur's determinants	28
3.2 Characterization of functions belonging to \mathcal{M}	32
3.3 Generalized Schur algorithm	40
3.4 Characterization of certain meromorphic functions on $D(0,1)$	44
3.5 Smyth's theorem	52
Notes	58
References	59

Chapter 4

Generalities concerning distribution modulo 1 of real sequences

4.0 Notation and examples	61
4.1 Sequences with finitely many limit points modulo 1	62
4.2 Uniform distribution of sequences	63
4.3 Weyl's theorems	64
4.4 Van der Corput's and Fejer's theorems. Applications	65
4.5 Koksma's theorem	67
4.6 Some notions about uniform distribution modulo 1 in \mathbf{R}^p	71
Notes	73
References	74

Chapter 5

Pisot numbers, Salem numbers and distribution modulo 1

5.0 Notation	77
5.1 Some sequences $(\lambda\alpha^n)$ non-uniformly distributed modulo 1	78
5.2 Pisot numbers and Salem numbers. Definitions and algebraic properties	84
5.3 Distribution modulo 1 of the sequences (α^n) with α a U -number ..	87
5.4 Pisot numbers and distribution modulo 1 of certain sequences $(\lambda\theta^n)$	89
5.5 Salem numbers and distribution modulo 1 of certain sequences $(\lambda\tau^n)$	93
5.6 Sequences $(\lambda\alpha^n)$ non-uniformly distributed modulo 1	95
Notes	97
References	98

Chapter 6

Limit points of Pisot and Salem sets

6.0 Notation	101
6.1 Closure of the set S	101
6.2 The derived set S' of S	103
6.3 Successive derived sets of S	107
6.4 Limit points of the set T	110
Notes	116
References	116

Chapter 7
Small Pisot numbers.

7.1 Schur's approximations for elements of \mathcal{N}_1^*	119
7.2 Small Pisot numbers	133
7.3 The smallest number of S''	139
Notes	149
References	150

Chapter 8
Some properties and applications of Pisot numbers

8.1 Some algebraic properties and applications of Pisot and Salem numbers	153
8.2 An application of Pisot numbers to a problem of uniform distribution	158
8.3 Application of Pisot numbers to a problem of rational approximations of algebraic numbers	160
8.4 Pisot numbers and the Jacobi–Perron algorithm	163
Notes	166
References	167

Chapter 9
Algebraic number sets

9.1 S_q sets	169
9.2 n -tuples of algebraic numbers	173
Notes	174
References	175

Chapter 10
Rational functions over rings of adèles

10.1 Adèles of \mathbf{Q}	177
10.2 Analytic functions in \mathbf{C}_p	180
10.3 Rationality criteria in $Q^I[[X]]$	182
10.4 Compact families of rational functions	183
Notes	187
References	187

Chapter 11

Generalizations of Pisot and Salem numbers to adeles

11.1	Definition of the set U_I	189
11.2	Subsets of U_I and characterizations	191
11.3	The sets S_I^∞	199
11.4	The sets T_I	203
11.5	The sets S_I^J	204
11.6	The sets B_I	207
11.7	Closed subsets of S_I^∞	210
11.8	Limit points of the sets T_I	215
	Notes	216
	References	218

Chapter 12

Pisot elements in a field of formal power series

12.0	Generalities and notation	219
12.1	Definitions of the sets \mathcal{U} and \mathcal{S}	221
12.2	Characterizations of the sets \mathcal{U} and \mathcal{S}	222
12.3	Limit points of the sets \mathcal{U} and \mathcal{S}	223
12.4	Relation between the sets \mathcal{S} and \mathcal{S}	225
	Notes	227
	References	227

Chapter 13

Pisot sequences, Boyd sequences and linear recurrence

13.0	Convergence theorems	229
13.1	Pisot sequences	233
13.2	Linear recurrence and Pisot sequences	241
13.3	Boyd sequences	250
	Notes	258
	References	259

Chapter 14
Generalizations of Pisot and Boyd sequences

•	14.1 Convergence theorems in A_I	261
	14.2 Pisot sequences in A_I	263
	14.3 Boyd sequences in A_I	266
	14.4 Pisot and Boyd sequences in a field of formal power series	268
	Notes	270
	References	270

Chapter 15
The Salem–Zygmund theorem

15.1 Introduction	271
15.2 Sets of uniqueness	272
15.3 Symmetric perfect sets	274
15.4 The sufficient condition for the Salem–Zygmund theorem	277
15.5 A theorem by Senge and Strauss	281
References	289
