

Table of Contents

Introduction (by János Pach)	1
---	---

Chapter I. Combinatorics and Algorithms of Arrangements

Leonidas Guibas and Micha Sharir

1. Introduction	9
2. Arrangements of Curves in the Plane	12
3. Lower Envelopes and Davenport-Schinzel Sequences	15
3.1 A Few Initial Applications	19
3.2 Applications of Lower Envelopes and Davenport-Schinzel Sequences	20
4. Faces in Arrangements	21
4.1 The Case of a Single Face	21
4.2 Many Faces in Arrangements and Related Problems	24
4.3 Partitioning Arrangements	26
5. Arrangements in Higher Dimensions	28
5.1 Lower Envelopes of Bivariate Functions and Their Applications	29
5.2 The Complexity of a Single Cell and Related Problems	31
6. Summary	32
References	33

Chapter II. Backwards Analysis of Randomized Geometric Algorithms

Raimund Seidel

1. Introduction	37
2. Delaunay Triangulations of Convex Polygons	39
3. Intersecting Line Segments	41
4. Constructing Planar Convex Hulls	46
5. Backwards Analysis of QUICKSORT	49
6. A Bad Example	53

7. Linear Programming for Small Dimension	54
8. Welzl's Minidisk Algorithm	56
9. Clarkson's Backwards Analysis of the Conflict Graph Based on the Convex Hull Algorithm	58
10. Odds and Ends	64
References	65

Chapter III. Epsilon-Nets and Computational Geometry

Jiří Matoušek

1. Range Spaces and ϵ -Nets	69
2. Geometric Range Spaces	73
3. A Sample of Applications	75
4. Removing Logarithms	81
5. Removing the Randomization	84
References	87

Chapter IV. Complexity of Polytope Volume Computation

Leonid Khachiyan

1. Jumps of the Derivatives	91
2. Exact Volume Computation is Hard	94
3. Volume Approximation	96
References	101

Chapter V. Allowable Sequences and Order Types in Discrete and Computational Geometry

Jacob E. Goodman and Richard Pollack

1. Introduction	103
2. Combinatorial Types of Configurations in the Plane and Allowable Sequences	104
3. Arrangements of Lines and Pseudolines	109
4. Applications of Allowable Sequences	112
4.1 Stretchability of Pseudoline Arrangements	112
4.2 The Directions Problem	113
4.3 k -Sets	114
5. Order Types of Points in \mathbf{R}^d and "Geometric Sorting"	118
6. The Number of Order Types in \mathbf{R}^d	120
7. Isotopy and Realizability Questions	123
8. Lattice Realization of Order Types and the Problem of Robustness in Computational Geometry	127
References	130

Chapter VI. Hyperplane Approximation and Related Topics

Nikolai M. Korneenko and Horst Martini

1. Introduction	135
2. MINSUM Problem: Orthogonal L_1 -Fit	137
2.1 Basic Facts	137
2.2 General Case: $O(n^d \log n)$ Time and Linear Space Algorithm ..	138
2.3 General Case: $O(n^d)$ Time	140
2.4 Restrictions and Extensions	142
3. MINSUM Problem: Vertical L_1 -Fit	146
4. MINMAX Problem: Orthogonal L_∞ -Fit	148
4.1 Unweighted Case	148
4.2 Weighted Case	149
4.3 MINMAX Problem: k -Flats	150
5. MINMAX Problem: Vertical L_∞ -Fit	150
6. Related Issues	151
6.1 Stabbing Lines/Hyperplanes	151
6.2 k -Hyperplane Problems	151
References	155

Chapter VII. Geometric Transversal Theory

Jacob E. Goodman, Richard Pollack and Rephael Wenger

1. Introduction	163
2. Hadwiger-Type Theorems	166
3. The Combinatorial Complexity of the Space of Transversals	172
4. Translates of a Convex Set	181
5. Transversal Algorithms	186
6. Other Directions	191
References	194

Chapter VIII. Hadwiger-Levi's Covering Problem Revisited

Károly Bezdek

0. Introduction	199
1. On $I_0(\mathbf{K})$ and $I_\infty(\mathbf{K})$	202
2. On $I_l(\mathbf{K})$ and k -fold Illumination	211
3. Some Simple Remarks on $\mathcal{H}(\mathbf{B})$	214
4. On Convex Bodies with Finitely Many Corner Points	217
5. Solution of Hadwiger-Levi's Covering Problem for Convex Polyhedra with Affine Symmetry	221
References	231

Chapter IX. Geometric and Combinatorial Applications of Borsuk's Theorem

Imre Bárány

1. Introduction	235
2. Van Kampen-Flores Type Results	236
3. The Ham-Sandwich Theorem	239
4. Centrally Symmetric Polytopes	240
5. Kneser's Conjecture	243
6. Sphere Coverings	246
References	247

Chapter X. Recent Results in the Theory of Packing and Covering

Gábor Fejes Tóth and Włodzimierz Kuperberg

1. Introduction	251
2. Preliminaries and Basic Concepts	252
3. A Review of Some Classical Results in the Plane	253
4. Economical Packing in and Covering of the Plane	255
5. Multiple Packing and Covering	260
6. Some Computational Aspects of Packing and Covering	264
7. Restrictions on the Number of Neighbors in a Packing	266
8. Selected Topics in 3 Dimensions.....	270
References	273

Chapter XI. Recent Developments in Combinatorial Geometry

William Moser and János Pach

1. The Distribution of Distances	281
2. Graph Dimensions	287
3. Geometric Graphs	291
4. Arrangements of Lines in Space	295
References.....	296

Chapter XII. Set Theoretic Constructions in Euclidean Spaces

Péter Komjáth

0. Introduction.....	303
1. Simple Transfinite Constructions.....	304
2. Closed Sets or Better Well-Orderings	308
3. Extending the Coloring More Carefully	313

4. The Use of the Continuum Hypothesis	316
5. The Infinite Dimensional Case	320
6. Large Paradoxical Sets in Another Sense	321
References	324
Author Index	327
Subject Index	335
