

Contents

1. Non-Classical Logic and Automated Theorem-Proving	1
1.1. History of Non-Classical Logic in AI and ATP	1
1.2. Non-Classical Approaches to AI	3
1.3. Non-Classical Proof Procedures for Non-Classical Logics	12
2. Theorem-Proving for the Relevant Logic LR	19
2.1. The Logic LR	19
2.1.1. Syntactic Preliminaries and Axiomatization	19
2.1.2. Facts about LR	22
2.1.3. Proof Theory	25
2.1.4. Decidability: formulation Lk	30
2.1.5. Computational Complexity of Lk	39
2.2. Minimal Proof Theory for LR	43
2.2.1. Formulation L2: normal-forms and other equivalences	43
2.2.2. Formulation L3: no contraction on + or &	45
2.2.3. Formulation L4: invertible rules and normalized proofs.	48
2.2.4. Formulation L5: contraction confined; decidability.	52
2.2.5. Computational Complexity Revisited.	57
2.3. Properties of Provable Multisets	60
2.3.1. Normal-Forms Revisited.	61
2.3.2. Derived Axioms and the <i>Ko</i> Rule	63
2.3.3. Positive/Negative Parts and the Rule-of-2	66
3. Algebraic Models	71
3.1. LR Models and the Matrix Property	71
3.2. Measures of Matrix Strength	76
3.2.1. Relative Measures of Strength	78
3.2.2. Rigid Measures of Strength	80
3.3. Testing for the Matrix Property	90
4. Proof Theory to Theorem Prover	97
4.1. The Basic Algorithm	97
4.1.1. The Preferred Strategy	98
4.1.2. Adopting the Right Attitude	107
4.2. Bits and Pieces	112
4.2.1. Data Structures - or, Roman Numerals and Godel Numbers are fine, but...	113
4.2.2. Applying Rules	115
4.2.3. Checking for Local and Global Properties	116
4.2.4. Program Correctness	119
Appendix I. Runtime Statistics for KRIPKE	121
Appendix II. Performance on Associative Formulas	133
Bibliography	135
Author Index	143
Subject Index	147
