Preface		3
Chapter 1	Expansion of Rational Fractions	5
1.1	Introduction	5
1.2	Definitions and Notation	7
1.3	Expansion of Rational Fractions	8
1.4	Expansion of Rational Fractions (General Discussion)	13
1.5	Convergents and Their Properties	19
1.6	Differences of Convergents	27
1.7	Some Historical Comments	28
Chapter 2	Diophantine Equations	31
2.1	Introduction	31
2.2	The Method Used Extensively by Euler	32
2.3	The Indeterminate Equation $ax - by = \pm 1$	36
2.4	The General Solution of $ax - by = c$, $(a, b) = 1$	42
2.5	The General Solution of $ax + by = c$, $(a, b) = 1$	44
2.6	The General Solution of $Ax \pm By = \pm C$	46
2.7	Sailors, Coconuts, and Monkeys	48
Chapter 3	Expansion of Irrational Numbers	51
3.1	Introduction	51
3.2	Preliminary Examples	52
3.3	Convergents	58
3.4	Additional Theorems on Convergents	61
3.5	Some Notions of a Limit	63
3.6	Infinite Continued Fractions	66
3.7	Approximation Theorems	70
3.8	Geometrical Interpretation of Continued Fractions	77
3.9	Solution of the Equation $x^2 = ax + 1$	80
3.10	Fibonacci Numbers	81
3.11	A Method for Calculating Logarithms	84

Chapter 4	Periodic Continued Fractions	88
4.1	Introduction	88
4.2	Purely Periodic Continued Fractions	90
4.3	Quadratic Irrationals	96
4.4	Reduced Quadratic Irrationals	100
4.5	Converse of Theorem 4.1	104
4.6	Lagrange's Theorem	110
4.7	The Continued Fraction for \sqrt{N}	112
4.8	Pell's Equation, $x^2 - Ny^2 = \pm 1$	113
4.9	How to Obtain Other Solutions of Pell's Equation	118
Chapter 5	Epilogue	123
5.1	Introduction	123
5.2	Statement of the Problem	123
5.3	Hurwitz' Theorem	124
5.4	Conclusion	129
Appendix I.	Proof That $x^2 - 3y^2 = -1$ Has No Integral Solutions	131
Appendix II.	Some Miscellaneous Expansions	134
Solutions to Problems		140
References		159
Index		161
