Preface

1 Introduction **1**

1.1 Motivation and Overview 1

1.2 The basics of nonstandard analysis 5

1.3 Some notions of topological dynamics 14

1.4 Fundamentals of twistor theory 17

2 The case of nonstandard analogs of compact submanifolds of $\mathbb{R}^n$ **21**

2.1 Completing the space of compact $\mathcal{C}^1$-submanifolds 21

2.2 Directly generalizing the submanifold concept 33

3 The general nonstandard manifold concept **39**

3.1 The basic theory 39

3.2 Nonstandard analogs of the tangent bundle and of (Pseudo-) Riemannian structures 55

4 Some applications to nonstandard topological dynamics **65**

5 The cohomology group $H^1(M, \theta)$ **69**

6 The question of stability of geodesic incompleteness 85

7 An application to twistor theory 97

A physical epilogue 105

List of symbols 107

Bibliography 111

Index 115
