Duality and Quantum Field Theory by <i>Michael Atiyah</i>		1
1	Introduction	1
2	Abelian duality	1
3	Non-abelian monopoles	2
4	Olive-Montonen Duality	3
5	Super-symmetric theories	4
6	Modular Invariance	4
7	Seiberg-Witten theory	5
Kirby Calculus for Stein Surfaces by <i>Robert E. Gompf</i>		9
1	Legendrian links and Stein surfaces	10
2	Stein surfaces with 1-handles	17
3	Examples	21
4	Invariants of contact 3-manifolds	29
5	Open questions	41
Virtual moduli cycles and Gromov-Witten invariants of general symplectic manifolds by <i>Jun Li and Gang Tian</i>		47
1	Euler classes for Fredholm bundles	49
2	Gromov-Witten invariants	56
3	The proof of Proposition 2.2 and 2.3	62
4	One more example	80
From symplectic deformation to isotopy by <i>Dusa McDuff</i>		85
1	Introduction	85
2	Inflation and manifolds of nonsimple type	90
3	Embedding balls and blowing up	94
4	Symplectic fibrations	96
Virtual neighborhoods and the monopole equations by <i>Yongbin Ruan</i>		101
1	Introduction	101
2	Virtual neighborhood and topological invariant	104
3	Monopole equation and group action of 4-manifolds	110
On h-cobordisms and Seiberg-Witten invariants by <i>John W. Morgan and Zoltán Szabó</i>		117
1	Introduction	117
2	Proof of the surgery formulas	119
