Preface	vii
Chapter 1. Polynomials in One Variable	1
1.1. The Fundamental Theorem of Algebra	1
1.2. Numerical Root Finding	3
1.3. Real Roots	5
1.4. Puiseux Series	6
1.5. Hypergeometric Series	8
1.6. Exercises	11
Chapter 2. Gröbner Bases of Zero-Dimensional Ideals	13
2.1. Computing Standard Monomials and the Radical	13
2.2. Localizing and Removing Known Zeros	15
2.3. Companion Matrices	17
2.4. The Trace Form	20
2.5. Solving Polynomial Equations in Singular	23
2.6. Exercises	26
Chapter 3. Bernstein's Theorem and Fewnomials	29
3.1. From Bézout's Theorem to Bernstein's Theorem	29
3.2. Zero-dimensional Binomial Systems	32
3.3. Introducing a Toric Deformation	33
3.4. Mixed Subdivisions of Newton Polytopes	35
3.5. Khovanskii's Theorem on Fewnomials	38
3.6. Exercises	41
Chapter 4. Resultants	43
4.1. The Univariate Resultant	43
4.2. The Classical Multivariate Resultant	46
4.3. The Sparse Resultant	49
4.4. The Unmixed Sparse Resultant	52
4.5. The Resultant of Four Trilinear Equations	55
4.6. Exercises	57
Chapter 5. Primary Decomposition	59
5.1. Prime Ideals, Radical Ideals and Primary Ideals	59
5.2. How to Decompose a Polynomial System	61
5.3. Adjacent Minors	63
5.4. Permanental Ideals	67
5.5. Exercises	69

Chapter 6. Polynomial Systems in Economics	71
6.1. Three-Person Games with Two Pure Strategies	71
6.2. Two Numerical Examples Involving Square Roots	73
6.3. Equations Defining Nash Equilibria	77
6.4. The Mixed Volume of a Product of Simplices	79
6.5. Computing Nash Equilibria with PHCPack	82
6.6. Exercises	85
Chapter 7. Sums of Squares	87
7.1. Positive Semidefinite Matrices	87
7.2. Zero-dimensional Ideals and SOSTools	89
7.3. Global Optimization	92
7.4. The Real Nullstellensatz	94
7.5. Symmetric Matrices with Double Eigenvalues	96
7.6. Exercises	99
Chapter 8. Polynomial Systems in Statistics	101
8.1. Conditional Independence	101
8.2. Graphical Models	104
8.3. Random Walks on the Integer Lattice	109
8.4. Maximum Likelihood Equations	114
8.5. Exercises	117
Chapter 9. Tropical Algebraic Geometry	119
9.1. Tropical Geometry in the Plane	119
9.2. Amoebas and their Tentacles	123
9.3. The Bergman Complex of a Linear Space	127
9.4. The Tropical Variety of an Ideal	129
9.5. Exercises	131
Chapter 10. Linear Partial Differential Equations with Constant Coefficients	133
10.1. Why Differential Equations?	133
10.2. Zero-dimensional Ideals	135
10.3. Computing Polynomial Solutions	137
10.4. How to Solve Monomial Equations	140
10.5. The Ehrenpreis-Palamodov Theorem	141
10.6. Noetherian Operators	142
10.7. Exercises	144
Bibliography	147
Index	151
