

# CONTENTS

Preface .....	vii
Chapter 1 Introduction to degeneracy loci and Schubert polynomials .....	1
Chapter 2 Modern formulation; Grassmannians, flag varieties, Schubert varieties .....	14
Chapter 3 Symmetric polynomials useful in geometry	26
Chapter 4 Polynomials supported on degeneracy loci	40
Chapter 5 The Euler characteristic of degeneracy loci	53
Chapter 6 Flag manifolds and determinantal formulas for other classical groups .....	65
Chapter 7 $\tilde{P}$ - and $\tilde{Q}$ -polynomial formulas for other classical groups .....	79
Chapter 8 The classes of Brill-Noether loci in Prym varieties .....	92
Chapter 9 Applications and open problems .....	97
Appendix A Intersection theory; polynomials representing degeneracy loci .....	104
Appendix B Vexillary permutations and multi-Schur polynomials .....	109
Appendix C Bott-Samelson schemes .....	112
Appendix D Pfaffians .....	115
Appendix E Group-theoretic approaches .....	118
Appendix F Push-forward formulas .....	124
Appendix G The classes of relative diagonals .....	127
Appendix H A construction of Mumford .....	129
Appendix I Schur-Weyl modules .....	131
Appendix J Quantum double Schubert polynomials (with I. Ciocan-Fontanine) .....	134
Bibliography .....	139
Index of Notation .....	143
General Index .....	146
