Preface	xi
Preface to the English Translation	xiii
Objectives	xv
Chapter 1. Homeomorphisms and Homotopy Equivalences	1
1.1. Homeomorphisms	2
1.2. Homotopy equivalences	3
1.3. Topological pairs	5
Summary	6
Exercises	7
Chapter 2. Topological Spaces and Cell Complexes	9
2.1. Basic spaces	9
2.2. Product spaces and quotient spaces	10
2.3. Topological sums and attaching spaces	11
2.4. Cell complexes	13
Summary	16
Exercises	16
Chapter 3. Homotopy	17
3.1. Homotopy sets	17
3.2. Fundamental groups	19
3.3. Higher homotopy groups	22
3.4. Homotopy invariance	24
Summary	26
Exercises	26
Chapter 4. Homology	27
4.1. Homology groups	27
4.2. Homology axioms	28
4.3. Immediate consequences of the axioms	31

Summary	37
Exercises	37
Chapter 5. Homology Groups of Cell Complexes	39
5.1. Calculation of homology groups of cell complexes	40
5.2. Homology of simplicial complexes	44
5.3. Homology calculation of cell complexes	51
Summary	52
Exercises	53
Chapter 6. Cohomology	55
6.1. Cohomology axioms	55
6.2. Cohomology of simplicial complexes	56
Summary	59
Exercises	59
Chapter 7. The Universal Coefficient Theorem	61
7.1. Products of abelian groups	61
7.2. The Künneth formula	64
7.3. Cup products	64
7.4. The universal coefficient theorem	66
Summary	66
Exercises	67
Chapter 8. Fiber Bundles and Vector Bundles	69
8.1. Fiber bundles	69
8.2. Vector bundles	73
8.3. Grassmann manifolds	75
Summary	79
Exercises	80
Chapter 9. Spectral Sequences	81
9.1. Exact couples and spectral sequences	81
9.2. Spectral sequences of fiber bundles	84
9.3. Applications of spectral sequences	88
9.4. Cohomology spectral sequences	90
9.5. Cohomology groups of $P^k(\mathbb{C})$	91
9.6. Collapsing cohomology sequences	92
9.7. Cohomology of classifying spaces	93
Summary	97
Exercises	97

A View from Current Mathematics	99
Appendix	105
Sets	105
Topological spaces and continuous maps	107
Groups	109
Answers to Exercises	111
Recommended Reading	115
Index	117
