Contents

Introduction ix

1 Poisson algebras and quantization 1
- 1.1 Modules over rings of power series . . . 1
  - 1.1.1 Topologically free K-modules . . . 1
  - 1.1.2 Completion of K-modules . . . 2
- 1.2 Poisson algebras . . . 2
  - 1.2.1 Definition . . . 2
  - 1.2.2 Examples of Poisson algebras . . . 2
- 1.3 Quantization of Poisson algebras . . . 4
  - 1.3.1 Deformations . . . 4
  - 1.3.2 Quantization . . . 4
  - 1.3.3 Examples of quantization . . . 5
  - 1.3.4 Loss of symmetry in quantization . . . 7
- 1.4 Poisson manifolds and quantization . . . 7
  - 1.4.1 Definition . . . 7
  - 1.4.2 Symplectic leaves of a Poisson manifold . . . 8
  - 1.4.3 Quantization of Poisson manifolds . . . 10
  - 1.4.4 Example of quantization of a Poisson manifold (Geometric quantization) . . . 10
- 1.5 Rational forms of a quantization . . . 11
- 1.6 Physical meaning of quantization . . . 11

2 Poisson-Lie groups 15
- 2.1 Poisson-Lie groups . . . 15
  - 2.1.1 Definition . . . 15
- 2.2 Lie bialgebras . . . 16
  - 2.2.1 Definition . . . 16
  - 2.2.2 Examples of Lie bialgebras . . . 18
  - 2.2.3 Duality . . . 18
- 2.3 Poisson-Lie theory . . . 19
  - 2.3.1 Main theorem of Poisson-Lie theory . . . 19
  - 2.3.2 Dual Poisson-Lie group . . . 21
  - 2.3.3 Examples of dual Lie bialgebras and dual Poisson-Lie groups 21

3 Coboundary Lie bialgebras 25
3.1 Some Lie algebra cohomology . . . 25
3.2 Coboundary Lie bialgebras . . . 26
3.3 The classical Yang-Baxter map . . . 26
3.4 Triangular Lie bialgebras and the classical Yang-Baxter equation 28
3.5 Classification of triangular structures . . . 29
3.6 Quasitriangular Lie bialgebras . . . 31
3.7 Examples of coboundary, triangular and quasitriangular Lie bialgebras . . . 31

4 Drinfeld's double construction 33
4.1 Manin triples . . . 33
4.2 Drinfeld's double . . . 34
4.3 Examples . . . 37
4.4 Standard Lie bialgebra structure on simple Lie algebras . . . 37
4.4.1 Notations . . . 37
4.4.2 Standard structure . . . 38

5 Belavin-Drinfeld classification (I) 41
5.1 Coboundary structure on simple Lie bialgebras . . . 41
5.2 Skew-symmetric r-matrices . . . 42
5.3 Non skew-symmetric r-matrices . . . 42
5.4 Proof of the classification theorem . . . 43
5.4.1 The Cayley transform . . . 44
5.4.2 Proof of part 1) . . . 45
5.4.3 Proof of part 2) . . . 46

6 Infinite dimensional Lie bialgebras 49
6.1 Infinite Manin triples . . . 49
6.2 Examples . . . 50
6.2.1 The standard structure on Kac-Moody algebras . . . 50
6.3 The CYBE with spectral parameter . . . 51
6.3.1 An example: the Yangian and its dual . . . 51
6.3.2 The CYBE with spectral parameter . . . 53
6.3.3 Construction of a Lie bialgebra from an r-matrix . . . 53
6.4 Solutions of the CYBE with spectral parameters . . . 55
6.5 Affine Lie algebras . . . 57
6.5.1 Definition . . . 57
6.5.2 Lie bialgebra structure . . . 58

7 Belavin-Drinfeld classification (II) 59
7.1 Properties of nondegenerate solutions . . . 59
7.2 Meromorphic continuation of $r(z)$ to $\mathbb{C}$ . . . 61
7.3 Proof of the classification theorem . . . 62
7.3.1 Myberg's theorem . . . 62
7.3.2 Elliptic solutions . . . 63
7.3.3 Rational and trigonometric r-matrices . . . 64

8 Hopf algebras **67**
8.1 Definition of Hopf algebras 67
8.1.1 Finite groups revisited 67
8.1.2 Coalgebras 68
8.1.3 Hopf algebras 68
8.2 Pictorial representation 69
8.3 Examples of Hopf algebras 71
8.4 Duality in Hopf algebras 73
8.5 Deformation Hopf algebras 74

9 Quantized universal enveloping algebras **75**
9.1 Quantized enveloping algebras 75
9.2 The quantization theorem 77
9.3 Examples 77
9.4 Coboundary, quasitriangular, triangular Hopf algebras 79
9.4.1 Coboundary Hopf algebras 79
9.4.2 (Quasi)triangular Hopf algebras 80
9.4.3 Modifications of the quantization theorem 83
9.5 Quantization by twists 84

10 Formal groups and h-formal groups **87**
10.1 Definition 87
10.2 Duality 88
10.3 R-matrices and R-forms 90
10.3.1 Comodules 90
10.3.2 Universal R-forms (coquasitriangular structures) 91

11 Infinite dimensional quantum groups **93**
11.1 The RTT formalism and h-formal groups 93
11.1.1 Formal groups revisited 93
11.1.2 The RTT formalism 94
11.1.3 Examples 95
11.2 RTT formalism and quantum groups 96
11.3 Examples 98
11.3.1 The Yangian 98
11.3.2 The dual Yangian 98
11.3.3 Quantum elliptic algebra 98
11.3.4 Quantized affine Lie algebra 99

12 The quantum double **101**
12.1 The quantum double 101
12.2 The quantum double for quantized universal enveloping algebras 106
12.3 Quasitriangular structure on $U_h(\mathfrak{g})$ 108

13 Tensor categories and quasi-Hopf algebras **111**
13.1 Semigroup categories 111
13.1.1 Definition 111
13.1.2 Examples 113
13.1.3 Tensor functors 114
13.2 Monoidal categories 115

13.2.1 Units in semigroup categories . . . 115
13.2.2 MacLane's theorem . . . 117
13.3 Quasi-bialgebras and quasi-Hopf algebras . . . 118
13.3.1 Definition . . . 118
13.3.2 Equivalence of quasi-bialgebras and twists . . . 119
13.3.3 "Nonabelian cohomology" . . . 120

14 Braided tensor categories **123**
14.1 Braided monoidal categories . . . 123
14.1.1 Motivation . . . 123
14.1.2 The braid group . . . 124
14.1.3 Braided tensor functors: . . . 127
14.1.4 Braid group representations . . . 128
14.1.5 Symmetric categories . . . 128
14.2 Quasitriangular Quasi-Hopf algebras . . . 128
14.2.1 Equivalence of quasitriangular quasi-Hopf algebras . . . 129

15 KZ equations and the Drinfeld Category **131**
15.1 The KZ equations: . . . 131
15.1.1 Definition . . . 131
15.1.2 Link with the CYBE . . . 132
15.2 Monodromy of the KZ equations . . . 132
15.2.1 The KZ associator . . . 133
15.2.2 Quasi-Hopf structure . . . 135
15.2.3 Braided (quasitriangular) structure . . . 137
15.3 The Drinfeld category . . . 140
15.4 Braid group representation . . . 141

16 Quasi-Hopf quantized enveloping algebras **143**
16.1 Quasi-Hopf quantized enveloping algebras . . . 143
16.1.1 Definition . . . 143
16.1.2 Examples . . . 144
16.1.3 Twists . . . 144
16.2 Lie quasibialgebras . . . 144
16.2.1 Definition . . . 145
16.2.2 Quantization of Lie quasibialgebras . . . 145
16.2.3 Quasitriangular Lie quasibialgebras . . . 145
16.2.4 Twists . . . 146
16.3 Associators . . . 147
16.3.1 Definition . . . 147
16.3.2 Action of twists on $\mathrm{Ass}(\mathfrak{g}, \Omega)$ . . . 148
16.4 Classification of quasitriangular quasi-Hopf QUE algebra . . . 148
16.5 The Drinfeld-Kohno theorem . . . 149
16.6 Geometric interpretation of Lie quasibialgebras . . . 150

17 Lie associators **153**
17.1 Lie associators . . . 153
17.1.1 Definition . . . 153
17.1.2 The space of Lie associators . . . 155
17.2 The Grothendieck-Teichmuller group . . . 155

17.2.1 Definition . . . 155
17.2.2 The action of $GT_1(k)$ on completed braid groups . . . 158
17.2.3 Drinfeld's conjecture . . . 159

18 Fiber functors and Tannaka-Krein duality **161**
18.1 Tensor categories . . . 161
18.2 Fiber functor . . . 161
18.2.1 First example . . . 161
18.2.2 Tannaka-Krein duality . . . 162
18.2.3 Tannaka-Krein duality for bialgebras . . . 164

19 Quantization of finite dimensional Lie bialgebras **165**
19.1 Quantization of the Drinfeld double . . . 165
19.1.1 The Drinfeld category . . . 165
19.1.2 The forgetful functor . . . 166
19.1.3 The Verma modules . . . 166
19.1.4 Tensor structure on the forgetful functor . . . 167
19.1.5 Quantization of $\mathfrak{g}$ . . . 170
19.2 Quantization of finite-dimensional Lie bialgebras . . . 172
19.3 Quasitriangular quantization . . . 177
19.4 Quantization of r-matrices . . . 177

20 Universal constructions **179**
20.1 Cyclic categories . . . 179
20.1.1 Definition . . . 179
20.1.2 Basic notions related to cyclic categories . . . 179
20.1.3 Linear algebraic structures . . . 180
20.2 Universal constructions . . . 182
20.2.1 Acyclic tensor calculus . . . 184

21 Universal quantization **185**
21.1 Statement of the theorem . . . 185
21.2 Quantization of finite dimensional Lie bialgebras revisited . . . 186
21.3 Categorical Drinfeld double . . . 190
21.4 The Drinfeld category . . . 192
21.5 Quantization of $\mathfrak{g}_+$ . . . 193
21.6 Quantization of Poisson-Lie groups . . . 195

22 Dequantization and the equivalence theorem **197**
22.1 The quantum double in a symmetric tensor category . . . 197
22.2 Dequantization . . . 200

1 KZ associator and multiple zeta functions. **201**
1.1 The multiple zeta function . . . 201
1.2 Multiple zeta values and the KZ equation . . . 202
1.3 The relations between multiple zeta values . . . 204

2 Monodromy of trigonometric KZ equations **207**
2.1 The trigonometric KZ equations . . . 207
2.2 Trigonometric and rational KZ equations . . . 208
2.3 Monodromy of the trigonometric KZ equations . . . 210

3 Solutions to Problems and Exercises **213**
