<i>Preface</i>	ix
1 Elements of Riemannian Geometry	1
1.1 Smooth Manifolds	1
1.2 Riemannian Manifolds	7
1.3 Curvature and Topology	11
1.4 From Local to Global Analysis	12
1.5 Special Coordinates	14
2 Sobolev Spaces: The Compact Setting	21
2.1 Background Material	21
2.2 Sobolev Spaces on Riemannian Manifolds	23
2.3 Sobolev Embeddings: General Results	28
2.4 The Case of the Euclidean Space	33
2.5 Sobolev Embeddings I	35
2.6 Sobolev Embeddings II	36
2.7 Compact Embeddings	40
2.8 Poincaré and Sobolev-Poincaré Inequalities	44
2.9 A Finiteness Theorem	47
3 Sobolev Spaces: The Noncompact Setting	51
3.1 Density Problems	52
3.2 Sobolev Embeddings I	57
3.3 Sobolev Embeddings II	67
3.4 Disturbed Sobolev Inequalities	72
4 Best Constants in the Compact Setting I	81
4.1 Program \mathcal{B} , Part I	82
4.2 The Role of $\alpha_q(M)$	91
4.3 Program \mathcal{A} , Part I	98
4.4 On the Scale of Optimal Inequalities	122

5	Best Constants in the Compact Setting II	127
5.1	The Case of the Standard Unit Sphere	129
5.2	Program \mathcal{B} , Part II	133
5.3	Program \mathcal{A} , Part II	141
5.4	The Role of $B_0(g)$	161
5.5	One More Question	165
6	Optimal Inequalities with Constraints	171
6.1	The Case of an Arbitrary Compact Manifold	171
6.2	The Case of the Sphere	176
6.3	Applications to the Nirenberg Problem	181
7	Best Constants in the Noncompact Setting	193
7.1	Questions 1 and 2	194
7.2	Questions 3 and 4	199
7.3	Proof of Theorem 7.2	203
7.4	Explicit Inequalities	237
8	Euclidean-Type Sobolev Inequalities	239
8.1	Euclidean-Type Generic Sobolev Inequalities	240
8.2	Euclidean-Type Optimal Sobolev Inequalities	250
8.3	Nash's Inequality	260
9	The Influence of Symmetries	265
9.1	Geometric Preliminaries	265
9.2	Compact Manifolds	267
9.3	Optimal Inequalities for Compact Manifolds	270
9.4	Compactness for Radially Symmetric Functions	277
9.5	A Main Lemma for Complete Manifolds	280
9.6	The Codimension 1 Case	284
9.7	The General Case	289
10	Manifolds with Boundary	297
	<i>Bibliography</i>	301
