<b>Preface</b> . . . . .	v
<b>Introduction</b> . . . . .	xiii

## A. Abstract Representation Theory

<b>Chapter I. Reproducing Kernel Spaces</b> . . . . .	3
I.1. Operator-Valued Positive Definite Kernels . . . . .	3
I.2. The Cone of Positive Definite Kernels . . . . .	14
<b>Chapter II. Representations of Involutive Semigroups</b> . . . . .	20
II.1. Involutive Semigroups . . . . .	21
II.2. Bounded Representations . . . . .	24
II.3. Hermitian Representations . . . . .	29
II.4. Representations on Reproducing Kernel Spaces . . . . .	34
<b>Chapter III. Positive Definite Functions on Involutive Semigroups</b> . . . . .	52
III.1. Positive Definite Functions—the Discrete Case . . . . .	53
III.2. Enveloping $C^*$ -algebras . . . . .	68
III.3. Multiplicity Free Representations . . . . .	80
<b>Chapter IV. Continuous and Holomorphic Representations</b> . . . . .	99
IV.1. Continuous Representations and Positive Definite Functions . . . . .	99
IV.2. Holomorphic Representations of Involutive Semigroups . . . . .	119

## B. Convex Geometry and Representations of Vector Spaces

<b>Chapter V. Convex Sets and Convex Functions</b> . . . . .	125
V.1. Convex Sets and Cones . . . . .	126
V.2. Finite Reflection Groups and Convex Sets . . . . .	138
V.3. Convex Functions and Fenchel Duality . . . . .	147
V.4. Laplace Transforms . . . . .	163
V.5. The Characteristic Function of a Convex Set . . . . .	174

<b>Chapter VI. Representations of Cones and Tubes</b> . . . . .	184
VI.1. Commutative Representation Theory . . . . .	185
VI.2. Representations of Cones . . . . .	195
VI.3. Holomorphic Representations of Tubes . . . . .	205
VI.4. Realization of Cyclic Representations by Holomorphic Functions . . . . .	209
VI.5. Holomorphic Extensions of Unitary Representations . . . . .	214

## C. Convex Geometry of Lie Algebras

<b>Chapter VII. Convexity in Lie Algebras</b> . . . . .	221
VII.1. Compactly Embedded Cartan Subalgebras . . . . .	222
VII.2. Root Decompositions . . . . .	231
VII.3. Lie Algebras With Many Invariant Convex Sets . . . . .	251
<b>Chapter VIII. Convexity Theorems and Their Applications</b> . . . . .	265
VIII.1. Admissible Coadjoint Orbits and Convexity Theorems . . . . .	266
VIII.2. The Structure of Admissible Lie Algebras . . . . .	292
VIII.3. Invariant Elliptic Cones in Lie Algebras . . . . .	306

## D. Highest Weight Representations of Lie Algebras, Lie Groups, and Semigroups

<b>Chapter IX. Unitary Highest Weight Representations: Algebraic Theory</b> . . . . .	327
IX.1. Generalized Highest Weight Representations . . . . .	328
IX.2. Positive Complex Polarizations . . . . .	344
IX.3. Highest Weight Modules of Finite-Dimensional Lie Algebras . . . . .	356
IX.4. The Metaplectic Factorization . . . . .	361
IX.5. Unitary Highest Weight Representations of Hermitian Lie Algebras . . . . .	374
<b>Chapter X. Unitary Highest Weight Representations: Analytic Theory</b> . . . . .	387
X.1. The Convex Moment Set of a Unitary Representation . . . . .	388
X.2. Irreducible Unitary Representations . . . . .	394
X.3. The Metaplectic Representation and Its Applications . . . . .	400
X.4. Special Properties of Unitary Highest Weight Representations . . . . .	411
X.5. Moment Sets for $C^*$ -algebras . . . . .	419
X.6. Moment Sets for Group Representations . . . . .	428

<b>Chapter XI. Complex Ol'shanskiĭ Semigroups and Their Representations</b> . . . . .	442
XI.1. Lawson's Theorem on Ol'shanskiĭ Semigroups . . . . .	443
XI.2. Holomorphic Extension of Unitary Representations . . . . .	457
XI.3. Holomorphic Representations of Ol'shanskiĭ Semigroups . . . . .	464
XI.4. Irreducible Holomorphic Representations . . . . .	470
XI.5. Gelfand-Raikov Theorems for Ol'shanskiĭ Semigroups . . . . .	476
XI.6. Decomposition and Characters of Holomorphic Representations . . . . .	477

<b>Chapter XII. Realization of Highest Weight Representations on Complex Domains</b> . . . . .	493
--	-----

XII.1. The Structure of Groups of Harish-Chandra Type . . . . .	494
XII.2. Representations of Groups of Harish-Chandra Type . . . . .	514
XII.3. The Compression Semigroup and Its Representations . . . . .	524
XII.4. Examples . . . . .	530
XII.5. Hilbert Spaces of Square Integrable Holomorphic Functions . . . . .	538

## **E. Complex Geometry and Representation Theory**

<b>Chapter XIII. Complex and Convex Geometry of Complex Semigroups</b> . . . . .	557
--	-----

XIII.1. Locally Convex Functions and Local Recession Cones . . . . .	559
XIII.2. Invariant Convex Sets and Functions in Lie Algebras . . . . .	563
XIII.3. Calculations in Low-Dimensional Cases . . . . .	571
XIII.4. Biinvariant Plurisubharmonic Functions . . . . .	576
XIII.5. Complex Semigroups and Stein Manifolds . . . . .	586
XIII.6. Biinvariant Domains of Holomorphy . . . . .	595

<b>Chapter XIV. Biinvariant Hilbert Spaces and Hardy Spaces on Complex Semigroups</b> . . . . .	600
---	-----

XIV.1. Biinvariant Hilbert Spaces . . . . .	601
XIV.2. Hardy Spaces Defined by Sup-Norms . . . . .	608
XIV.3. Hardy Spaces Defined by Square Integrability . . . . .	616
XIV.4. The Fine Structure of Hardy Spaces . . . . .	623

<b>Chapter XV. Coherent State Representations</b> . . . . .	645
---	-----

XV.1. Complex Structures on Homogeneous Spaces . . . . .	646
XV.2. Coherent State Representations . . . . .	650
XV.3. Heisenberg's Uncertainty Principle and Coherent States . . . . .	656

## Appendices

Appendix I.	Bounded Operators on Hilbert Spaces . . . . .	665
Appendix II.	Spectral Measures and Unbounded Operators . . . . .	677
Appendix III.	Holomorphic Functions on Infinite-Dimensional Spaces . . . . .	686
Appendix IV.	Symplectic Geometry . . . . .	694
Appendix V.	Simple Modules of $\mathfrak{p}$ -Length 2 . . . . .	705
Appendix VI.	Symplectic Modules of Convex Type . . . . .	715
Appendix VII.	Square Integrable Representations of Locally Compact Groups . . . . .	727
Appendix VIII.	The Stone–von Neumann–Mackey Theorem . . . . .	742
<b>Bibliography</b> . . . . .		751
<b>List of Symbols</b> . . . . .		767
<b>Index</b> . . . . .		771
