Preface	ix
Introduction	xi
I Universal Enveloping Algebras	1
1 Algebraic Constructions	1
1.1 Universal Enveloping Algebras	1
1.2 Lie Algebra Deformations	2
1.3 Symmetrization	3
1.4 The Graded Algebra of $\mathcal{U}(\mathfrak{g})$	3
2 The Poincaré-Birkhoff-Witt Theorem	5
2.1 Almost Commutativity of $\mathcal{U}(\mathfrak{g})$	5
2.2 Poisson Bracket on $\mathfrak{Gr} \mathcal{U}(\mathfrak{g})$	5
2.3 The Role of the Jacobi Identity	7
2.4 Actions of Lie Algebras	8
2.5 Proof of the Poincaré-Birkhoff-Witt Theorem	9
II Poisson Geometry	11
3 Poisson Structures	11
3.1 Lie-Poisson Bracket	11
3.2 Almost Poisson Manifolds	12
3.3 Poisson Manifolds	12
3.4 Structure Functions and Canonical Coordinates	13
3.5 Hamiltonian Vector Fields	14
3.6 Poisson Cohomology	15
4 Normal Forms	17
4.1 Lie's Normal Form	17
4.2 A Faithful Representation of \mathfrak{g}	17
4.3 The Splitting Theorem	19
4.4 Special Cases of the Splitting Theorem	20
4.5 Almost Symplectic Structures	20
4.6 Incarnations of the Jacobi Identity	21
5 Local Poisson Geometry	23
5.1 Symplectic Foliation	23
5.2 Transverse Structure	24
5.3 The Linearization Problem	25
5.4 The Cases of $\mathfrak{su}(2)$ and $\mathfrak{sl}(2; \mathbb{R})$	27
III Poisson Category	29

6	Poisson Maps	29
6.1	Characterization of Poisson Maps	29
6.2	Complete Poisson Maps	31
6.3	Symplectic Realizations	32
6.4	Coisotropic Calculus	34
6.5	Poisson Quotients	34
6.6	Poisson Submanifolds	36
7	Hamiltonian Actions	39
7.1	Momentum Maps	39
7.2	First Obstruction for Momentum Maps	40
7.3	Second Obstruction for Momentum Maps	41
7.4	Killing the Second Obstruction	42
7.5	Obstructions Summarized	43
7.6	Flat Connections for Poisson Maps with Symplectic Target	44
IV	Dual Pairs	47
8	Operator Algebras	47
8.1	Norm Topology and C^* -Algebras	47
8.2	Strong and Weak Topologies	48
8.3	Commutants	49
8.4	Dual Pairs	50
9	Dual Pairs in Poisson Geometry	51
9.1	Commutants in Poisson Geometry	51
9.2	Pairs of Symplectically Complete Foliations	52
9.3	Symplectic Dual Pairs	53
9.4	Morita Equivalence	54
9.5	Representation Equivalence	55
9.6	Topological Restrictions	56
10	Examples of Symplectic Realizations	59
10.1	Injective Realizations of \mathbb{T}^3	59
10.2	Submersive Realizations of \mathbb{T}^3	60
10.3	Complex Coordinates in Symplectic Geometry	62
10.4	The Harmonic Oscillator	63
10.5	A Dual Pair from Complex Geometry	65
V	Generalized Functions	69
11	Group Algebras	69
11.1	Hopf Algebras	69
11.2	Commutative and Noncommutative Hopf Algebras	72
11.3	Algebras of Measures on Groups	73
11.4	Convolution of Functions	74
11.5	Distribution Group Algebras	76

12 Densities	77
12.1 Densities	77
12.2 Intrinsic L^p Spaces	78
12.3 Generalized Sections	79
12.4 Poincaré-Birkhoff-Witt Revisited	81
VI Groupoids	85
13 Groupoids	85
13.1 Definitions and Notation	85
13.2 Subgroupoids and Orbits	88
13.3 Examples of Groupoids	89
13.4 Groupoids with Structure	92
13.5 The Holonomy Groupoid of a Foliation	93
14 Groupoid Algebras	97
14.1 First Examples	97
14.2 Groupoid Algebras via Haar Systems	98
14.3 Intrinsic Groupoid Algebras	99
14.4 Groupoid Actions	101
14.5 Groupoid Algebra Actions	103
15 Extended Groupoid Algebras	105
15.1 Generalized Sections	105
15.2 Bisections	106
15.3 Actions of Bisections on Groupoids	107
15.4 Sections of the Normal Bundle	109
15.5 Left Invariant Vector Fields	110
VII Algebroids	113
16 Lie Algebroids	113
16.1 Definitions	113
16.2 First Examples of Lie Algebroids	114
16.3 Bundles of Lie Algebras	116
16.4 Integrability and Non-Integrability	117
16.5 The Dual of a Lie Algebroid	119
16.6 Complex Lie Algebroids	120
17 Examples of Lie Algebroids	123
17.1 Atiyah Algebras	123
17.2 Connections on Transitive Lie Algebroids	124
17.3 The Lie Algebroid of a Poisson Manifold	125
17.4 Vector Fields Tangent to a Hypersurface	127
17.5 Vector Fields Tangent to the Boundary	128

18 Differential Geometry for Lie Algebroids	131
18.1 The Exterior Differential Algebra of a Lie Algebroid	131
18.2 The Gerstenhaber Algebra of a Lie Algebroid	132
18.3 Poisson Structures on Lie Algebroids	134
18.4 Poisson Cohomology on Lie Algebroids	136
18.5 Infinitesimal Deformations of Poisson Structures	137
18.6 Obstructions to Formal Deformations	138
VIII Deformations of Algebras of Functions	141
19 Algebraic Deformation Theory	141
19.1 The Gerstenhaber Bracket	141
19.2 Hochschild Cohomology	142
19.3 Case of Functions on a Manifold	144
19.4 Deformations of Associative Products	144
19.5 Deformations of the Product of Functions	146
20 Weyl Algebras	149
20.1 The Moyal-Weyl Product	149
20.2 The Moyal-Weyl Product as an Operator Product	151
20.3 Affine Invariance of the Weyl Product	152
20.4 Derivations of Formal Weyl Algebras	152
20.5 Weyl Algebra Bundles	153
21 Deformation Quantization	155
21.1 Fedosov's Connection	155
21.2 Preparing the Connection	156
21.3 A Derivation and Filtration of the Weyl Algebra	158
21.4 Flattening the Connection	160
21.5 Classification of Deformation Quantizations	161
References	163
Index	175
