

Contents

1	Preliminaries	9
1.1	The category $wHk(Top)$	10
1.2	Relations, actions and quotients	13
1.2.1	The category Top_G	14
1.2.2	Equivariant cofibrations	17
1.2.3	The category $Top_H \cap Top_G$	19
1.3	Bundles	22
1.3.1	The category Bun_G	24
1.3.2	Homotopy classification of principal G -bundles	26
1.3.3	Equivariant bundles	27
2	Gauge Groups	35
2.1	Gauge Groups	35
2.2	The topology of gauge groups	40
2.3	The classifying space of $\mathcal{G}(\xi)$	49
3	Conjugation	51
3.1	Conjugation in the local gauge group	51
3.2	Isomorphism and Conjugacy	58
4	Conjugacy classes of vector bundles	61
4.1	Characteristic Classes	61
4.1.1	Complex vector bundles	62
4.1.2	Real vector bundles	68
4.2	Isotropy group	73
4.2.1	Isotropy and stable equivalence	74
4.2.2	Vector bundles on real projective spaces	78

5	Homotopy and fundamental equivalence	87
5.1	Introductory material	87
5.2	Conjugacy classes of gauge groups	89
5.3	Fundamental action and classifying spaces	92
5.4	An exact sequence	94
5.5	The isotropy of the fundamental action	97
A	The Milgram-Steenrod classifying space	99
A.1	Enlargement of actions and contractions	100
A.2	Enlargements	104
A.3	The construction of the classifying space	109
A.4	Inclusions, proclusions, cofibrations	115
A.5	The group structure of E_G	118
A.6	The functors \mathcal{E} and \mathcal{B} : algebraic properties	123
	A.6.1 Exactness	123
	A.6.2 Group theoretical invariants of \mathcal{E}	125
	A.6.3 Actions of classifying spaces and quotients	127
A.7	The functors \mathcal{E} , \mathcal{B} and principal bundles	130
