Preface	vii
1 Introduction	1
What Are Manifolds?	1
Why Study Manifolds?	4
2 Topological Spaces	17
Topologies	17
Bases	27
Manifolds	30
Problems	36
3 New Spaces from Old	39
Subspaces	39
Product Spaces	48
Quotient Spaces	52
Group Actions	58
Problems	62
4 Connectedness and Compactness	65
Connectedness	65
Compactness	73
Locally Compact Hausdorff Spaces	81
Problems	88

5	Simplicial Complexes	91
	Euclidean Simplicial Complexes	92
	Abstract Simplicial Complexes	96
	Triangulation Theorems	102
	Orientations	105
	Combinatorial Invariants	109
	Problems	114
6	Curves and Surfaces	117
	Classification of Curves	118
	Surfaces	119
	Connected Sums	126
	Polygonal Presentations of Surfaces	129
	Classification of Surface Presentations	137
	Combinatorial Invariants	142
	Problems	146
7	Homotopy and the Fundamental Group	147
	Homotopy	148
	The Fundamental Group	150
	Homomorphisms Induced by Continuous Maps	158
	Homotopy Equivalence	161
	Higher Homotopy Groups	169
	Categories and Functors	170
	Problems	176
8	Circles and Spheres	179
	The Fundamental Group of the Circle	180
	Proofs of the Lifting Lemmas	183
	Fundamental Groups of Spheres	187
	Fundamental Groups of Product Spaces	188
	Fundamental Groups of Manifolds	189
	Problems	191
9	Some Group Theory	193
	Free Products	193
	Free Groups	199
	Presentations of Groups	201
	Free Abelian Groups	203
	Problems	208
10	The Seifert–Van Kampen Theorem	209
	Statement of the Theorem	210
	Applications	212
	Proof of the Theorem	221

Distinguishing Manifolds	227
Problems	230
11 Covering Spaces	233
Definitions and Basic Properties	234
Covering Maps and the Fundamental Group	239
The Covering Group	247
Problems	253
12 Classification of Coverings	257
Covering Homomorphisms	258
The Universal Covering Space	261
Proper Group Actions	266
The Classification Theorem	283
Problems	289
13 Homology	291
Singular Homology Groups	292
Homotopy Invariance	300
Homology and the Fundamental Group	304
The Mayer–Vietoris Theorem	308
Applications	318
The Homology of a Simplicial Complex	323
Cohomology	329
Problems	334
Appendix: Review of Prerequisites	337
Set Theory	337
Metric Spaces	347
Group Theory	352
References	359
Index	362
