CONTENTS

	Introduction	vii
	Note on notation	ix
1	**Naming of parts**	**1**
1.1	Structures	2
1.2	Homomorphisms and substructures	5
1.3	Terms and atomic formulas	10
1.4	Parameters and diagrams	15
1.5	Canonical models	17
	Further reading	20
2	**Classifying structures**	**21**
2.1	Definable subsets	22
2.2	Definable classes of structures	30
2.3	Some notions from logic	37
2.4	Maps and the formulas they preserve	43
2.5	Classifying maps by formulas	48
2.6	Translations	51
2.7	Quantifier elimination	59
	Further reading	68
3	**Structures that look alike**	**69**
3.1	Theorems of Skolem	69
3.2	Back-and-forth equivalence	73
3.3	Games for elementary equivalence	82
	Further reading	91
4	**Interpretations**	**93**
4.1	Automorphisms	94
4.2	Relativisation	101
4.3	Interpreting one structure in another	107
4.4	Imaginary elements	113
	Further reading	122
5	**The first-order case: compactness**	**124**
5.1	Compactness for first-order logic	124
5.2	Types	130
5.3	Elementary amalgamation	134
5.4	Amalgamation and preservation	141
5.5	Expanding the language	147
5.6	Indiscernibles	152
	Further reading	156

6 The countable case **158**
6.1 Fraïssé's construction 158
6.2 Omitting types 165
6.3 Countable categoricity 171
6.4 ω-categorical structures by Fraïssé's method 175
Further reading 181

7 The existential case **182**
7.1 Existentially closed structures 183
7.2 Constructing e.c. structures 188
7.3 Model-completeness 195
7.4 Quantifier elimination revisited 201
Further reading 208

8 Saturation **210**
8.1 The great and the good 211
8.2 Big models exist 220
8.3 Syntactic characterisations 225
8.4 One-cardinal and two-cardinal theorems 233
8.5 Ultraproducts and ultrapowers 237
Further reading 248

9 Structure and categoricity **250**
9.1 Ehrenfeucht–Mostowski models 251
9.2 Minimal sets 257
9.3 Totally transcendental structures 264
9.4 Stability 273
9.5 Morley's theorem 286
Further reading 296

Index to symbols **298**

Index **300**
