

Contents

| | | |
|----------|---|-----------|
| 1 | General introduction | 3 |
| 1.1 | Construction and representation | 3 |
| 1.2 | The interpretation of exactness | 6 |
| 1.3 | Structure of the story | 8 |
| 1.4 | Motivation of the study | 11 |
| 1.5 | Historiographical scheme | 13 |
| 1.6 | Strategies in the interpretation of exactness | 15 |
| 1.7 | Methods of exposition | 17 |
| 1.8 | Survey | 20 |
| 1.9 | Conclusion | 21 |
| 2 | The legitimation of geometrical procedures before 1590 | 23 |
| 2.1 | Introduction | 23 |
| 2.2 | The legitimacy of the Euclidean constructions | 24 |
| 2.3 | The quadrature of the circle | 25 |
| 2.4 | Two mean proportionals | 27 |
| 2.5 | The status of the constructions | 34 |
| 2.6 | Conclusion | 36 |
| 3 | 1588: Pappus' "Collection" | 37 |
| 3.1 | Introduction | 37 |
| 3.2 | The classification of problems | 37 |
| 3.3 | Terminology and context of the classification | 48 |
| 3.4 | The precept | 48 |
| 3.5 | The constructing curves | 50 |
| 3.6 | Neusis constructions | 53 |
| 3.7 | Conclusion | 56 |
| 4 | The early modern tradition of geometrical problem solving; survey and examples | 59 |
| 4.1 | Introduction | 59 |
| 4.2 | Standard problems, standard constructions | 62 |
| 4.3 | Angular sections | 70 |
| 4.4 | Mean proportionals | 71 |

| | | |
|----------|--|------------|
| 4.5 | Area and content problems | 79 |
| 4.6 | Neusis problems | 81 |
| 4.7 | Reconstructing classical texts | 83 |
| 4.8 | Division of figures | 84 |
| 4.9 | Triangle problems | 88 |
| 4.10 | Varia | 91 |
| 4.11 | Heuristics and analysis | 93 |
| 5 | Early modern methods of analysis | 95 |
| 5.1 | Introduction | 95 |
| 5.2 | Classical analysis of plane problems | 98 |
| 5.3 | Algebraic analysis of plane problems | 102 |
| 5.4 | Ghetaldi: algebraic analysis limited | 106 |
| 5.5 | Classical analysis of solid problems | 110 |
| 5.6 | Algebraic analysis of solid problems | 112 |
| 5.7 | Conclusion | 117 |
| 6 | Arithmetic, geometry, algebra, and analysis | 119 |
| 6.1 | Introduction | 119 |
| 6.2 | Terminology | 119 |
| 6.3 | Arithmetic, geometry, algebra, analysis | 128 |
| 6.4 | Obstacles to the merging of arithmetic, geometry, algebra, and analysis | 130 |
| 6.5 | Conclusion | 132 |
| 7 | Using numbers in geometry — Regiomontanus and Stevin | 135 |
| 7.1 | Introduction | 135 |
| 7.2 | Regiomontanus | 136 |
| 7.3 | Stevin | 138 |
| 7.4 | A later discussion | 141 |
| 7.5 | Conclusion | 143 |
| 8 | Using algebra — Viète's analysis | 145 |
| 8.1 | Introduction | 145 |
| 8.2 | Viète's "New Algebra" | 145 |
| 8.3 | The "New Algebra" as a formal system | 148 |
| 8.4 | The "New Algebra" and the operations of arithmetic and geometry | 152 |
| 8.5 | The significance of Viète's "New Algebra" | 153 |
| 8.6 | Another approach: Van Ceulen | 154 |
| 8.7 | Conclusion: numbers, algebra, and geometrical construction | 157 |

| | |
|--|------------|
| 9 Clavius | 159 |
| 9.1 Introduction | 159 |
| 9.2 The treatise on the quadratrix | 160 |
| 9.3 The geometrical status of the construction | 162 |
| 9.4 Clavius' interpretation of geometrical exactness | 165 |
| 10 Viète | 167 |
| 10.1 A new postulate | 167 |
| 10.2 <i>A supplement to geometry</i> | 168 |
| 10.3 The construction of roots of third- and fourth-degree equations | 173 |
| 10.4 Further statements by Viète on constructions | 176 |
| 10.5 Viète's interpretation of geometrical exactness | 179 |
| 11 Kepler | 183 |
| 11.1 Constructibility and creation | 183 |
| 11.2 Kepler's demarcation of geometry | 184 |
| 11.3 Constructibility and existence | 185 |
| 11.4 Kepler's criticism of non-plane constructions | 187 |
| 11.5 Kepler's objections to algebraic methods | 189 |
| 11.6 Kepler's interpretation of geometrical exactness | 193 |
| 12 Molther | 195 |
| 12.1 <i>The Delian Problem</i> | 195 |
| 12.2 Arguments | 196 |
| 12.3 Molther's justification of the postulate | 197 |
| 12.4 The "Mesolabum" | 202 |
| 12.5 Molther's interpretation of geometrical exactness | 203 |
| 13 Fermat | 205 |
| 13.1 Geometrical problems and their analysis | 205 |
| 13.2 Concluding remarks | 209 |
| 14 Geometrical problem solving — the state of the art c. 1635 | 211 |
| 14.1 Introduction | 211 |
| 14.2 Principal dynamics: algebraic analysis | 214 |
| 14.3 Construction | 216 |
| 14.4 Interpretation of exactness | 219 |
| 14.5 Conclusion | 221 |
| 15 Introduction to Part II | 225 |
| 15.1 Descartes, construction, and exactness | 225 |
| 15.2 Mathematical ideas and results | 226 |
| 15.3 Philosophical and mathematical context | 228 |

| | |
|---|------------|
| 16 Construction and the interpretation of exactness in Descartes' studies of c. 1619 | 231 |
| 16.1 The general art to solve all problems | 231 |
| 16.2 The classification of problems | 233 |
| 16.3 Problems about continuous magnitude | 235 |
| 16.4 The "new compasses" | 237 |
| 16.5 The geometrical status of curve tracing | 245 |
| 16.6 Conclusion — Descartes' vision of geometry c. 1619 | 251 |
| 17 Descartes' general construction of solid problems c. 1625 | 255 |
| 17.1 The construction of roots of third- and fourth-degree equations | 255 |
| 17.2 Descartes' geometrical ideas c. 1625 | 259 |
| 18 Problem solving and construction in the "Rules for the direction of the mind" (c. 1628) | 261 |
| 18.1 The <i>Rules</i> | 261 |
| 18.2 The arithmetical operations | 263 |
| 18.3 The algebraic operations | 266 |
| 18.4 Comparison with Viète's "new algebra" | 268 |
| 18.5 Obstacles in the program of the <i>Rules</i> | 268 |
| 19 Descartes' first studies of Pappus' problem (early 1632) | 271 |
| 19.1 Golius' challenge | 271 |
| 19.2 Pappus' problem | 272 |
| 19.3 Descartes' earliest solution of the five-line problem reconstructed | 274 |
| 19.4 The "turning ruler and moving curve" procedure | 278 |
| 19.5 The significance of Pappus' problem | 281 |
| 20 The <i>Geometry</i>, introduction and survey | 285 |
| 20.1 Descartes' geometrical ideas c. 1619–1637 — a recapitulation | 285 |
| 20.2 The questions still open before 1637 | 287 |
| 20.3 The structure of the <i>Geometry</i> | 289 |
| 21 Algebraic operations in geometry | 293 |
| 21.1 Descartes' interpretation | 293 |
| 21.2 Comparison with earlier interpretations | 297 |
| 21.3 The actual interpretation of the algebraic operations in the <i>Geometry</i> | 300 |
| 22 The use of algebra in solving plane and indeterminate problems | 303 |
| 22.1 Problem, equation, construction | 303 |
| 22.2 An example | 306 |
| 22.3 Indeterminate problems | 310 |

| | | |
|-----------|---|------------|
| 23 | Descartes' solution of Pappus' problem | 313 |
| 23.1 | The problem | 313 |
| 23.2 | The general solution: equations and constructions | 315 |
| 23.3 | The three- and four-line Pappus problem | 317 |
| 23.4 | Pappus' problem "in five lines" | 325 |
| 23.5 | The "simplest" five-line locus | 329 |
| 23.6 | Another five-line locus | 332 |
| 23.7 | Clarity and concealment | 333 |
| 24 | Curves and the demarcation of geometry in the <i>Geometry</i> | 335 |
| 24.1 | The demarcation | 335 |
| 24.2 | Curves traced by motion | 338 |
| 24.3 | Pointwise construction of curves | 342 |
| 24.4 | Curves traced by means of strings | 346 |
| 24.5 | The demarcation of geometry before 1637 | 349 |
| 24.6 | The development of Descartes' ideas on demarcation between 1632 and 1637 | 352 |
| 25 | Simplicity and the classification of curves | 355 |
| 25.1 | The classification | 355 |
| 25.2 | Simplicity, tracing, and degree | 357 |
| 25.3 | Simplest possible curves and equations | 359 |
| 25.4 | Reducibility | 360 |
| 25.5 | Conclusion | 361 |
| 26 | The canon of geometrical construction | 363 |
| 26.1 | The "construction of equations" | 363 |
| 26.2 | The standard construction of third- and fourth-degree equations | 364 |
| 26.3 | The standard construction for fifth- and sixth-degree equations | 368 |
| 26.4 | Constructing equations of higher degree | 372 |
| 26.5 | The canon of construction | 374 |
| 26.6 | Special Cases | 375 |
| 27 | The theory of equations in the <i>Geometry</i> | 383 |
| 27.1 | Character of the theory and key ideas | 383 |
| 27.2 | The transformations | 386 |
| 27.3 | Reducibility | 389 |
| 27.4 | Descartes' example: a problem from Pappus | 393 |
| 27.5 | Conclusion | 396 |
| 28 | Conclusion of Part II | 399 |
| 28.1 | Forces and obstacles | 399 |
| 28.2 | Descartes' transformation of the art of geometrical problem solving | 400 |

| | | |
