<b>Figures</b>	<b>vii</b>
<b>1 Introduction and Brief Summary</b>	<b>1</b>
<b>2 A Brief Review of Applied Time Series Analysis</b>	<b>5</b>
2.1 Some Basic Concepts . . . . .	5
2.2 Stochastic Processes and Stationarity . . . . .	7
2.3 Differencing . . . . .	8
2.4 Linear Stationary Process, Wold Representation, and Auto-correlation Function . . . . .	13
2.5 The Spectrum . . . . .	16
2.6 Linear Filters and Their Squared Gain . . . . .	27
<b>3 ARIMA Models and Signal Extraction</b>	<b>31</b>
3.1 ARIMA Models . . . . .	31
3.2 Modeling Strategy, Diagnostics and Inference . . . . .	39
3.2.1 Identification . . . . .	39
3.2.2 Estimation and Diagnostics . . . . .	40
3.2.3 Inference . . . . .	41
3.2.4 A Particular Class of Models . . . . .	43
3.3 Preadjustment . . . . .	44
3.4 Unobserved Components and Signal Extraction . . . . .	48
3.5 ARIMA-Model-Based Decomposition of a Time Series . . . . .	55

3.6	Short-Term and Long-Term Trends . . . . .	65
<b>4</b>	<b>Detrending and the Hodrick–Prescott Filter</b>	<b>69</b>
4.1	The Hodrick–Prescott Filter: Equivalent Representations . . .	69
4.2	Basic Characteristics of the Hodrick–Prescott Filter . . . . .	72
4.3	Some Criticisms and Discussion of the Hodrick–Prescott Filter	77
4.4	The Hodrick–Prescott Filter as a Wiener–Kolmogorov Filter	80
4.4.1	An Alternative Representation . . . . .	80
4.4.2	Derivation of the Filter . . . . .	82
4.4.3	The Algorithm . . . . .	85
4.4.4	A Note on Computation . . . . .	86
<b>5</b>	<b>Some Basic Limitations of the Hodrick–Prescott Filter</b>	<b>87</b>
5.1	Endpoint Estimation and Revisions . . . . .	87
5.1.1	Preliminary Estimation and Revisions . . . . .	87
5.1.2	An Example . . . . .	90
5.2	Spurious Results . . . . .	100
5.2.1	Spurious Crosscorrelation . . . . .	101
5.2.2	Spurious Autocorrelation; Calibration . . . . .	103
5.2.3	Spurious Periodic Cycle . . . . .	105
5.3	Noisy Cyclical Signal . . . . .	114
<b>6</b>	<b>Improving the Hodrick–Prescott Filter</b>	<b>117</b>
6.1	Reducing Revisions . . . . .	117
6.2	Improving the Cyclical Signal . . . . .	121
<b>7</b>	<b>Hodrick–Prescott Filtering Within a Model-Based Approach</b>	<b>135</b>
7.1	A Simple Model-Based Algorithm . . . . .	135
7.2	A Complete Model-Based Method; Spuriousness Reconsidered . . . . .	137
7.3	Some Comments on Model-Based Diagnostics and Inference	156
7.4	MMSE Estimation of the Cycle: A Paradox . . . . .	167
	<b>Appendix</b>	<b>171</b>

# Figures

2.1	Roots of unit circle	<i>page</i> 10
2.2	Sine-cosine functions	12
2.3	Theoretical ACF/Sample ACF	15
2.4	Generated time series/Fourier series	17
2.5	Histogram of frequencies/power spectrum	18
2.6	Spectra of AR(2) process	22
2.7	Realization of AR(2) process	23
2.8	Examples of spectra	24
2.9	Cyclical period and frequency	26
2.10	Series spectrum/gain of seasonal detrending filters	29
3.1	Stationarity region for AR(2) parameters	35
3.2	Spectra of IMA(1,1) process	38
3.3	Forecasts and 95% confidence interval	42
3.4	Preadjustment	46
3.5	Deterministic effects	47
3.6	Canonical decomposition of a random walk	57
3.7	Spectral AMB decomposition	59
3.8	Wiener–Kolmogorov filter	60
3.9	Squared gains	61
3.10	Series and estimated components	62
3.11	Standard error and estimators	63
3.12	Forecasts	64
3.13	Squared gain for trend-cycle filter	65
3.14	Squared gain for trend/trend estimators	67
4.1	Squared gain function: Butterworth filters	71
4.2	Hodrick–Prescott filter, trend	73
4.3	Hodrick–Prescott filter, cycle	75
4.4	X11-HP cycle filter	76
4.5	Spectrum of the white noise component estimator	79
5.1	Short-term economic indicators: original series	92
5.2	X11-SA series and HP trend	93
5.3	X11 and HP cycles	94
5.4	Concurrent versus final trend estimator	95
5.5	Concurrent versus final cycle estimator	96
5.6	Revisions in concurrent estimator	97
5.7	95% Confidence intervals for cycle (based on revisions)	99
5.8	Squared gain: convolution of HP and X11 filters	100
5.9	Density for correlation coefficient: white noise case	101
5.10	Density for correlation coefficient: random walk case	102

5.11	Density for correlation coefficient: airline model	<i>page</i> 103
5.12	Spectrum of AR(4) for the white noise case	106
5.13	Decomposition of a white noise series	107
5.14	Spectrum of cycle component in a random walk	108
5.15	Spectrum of cycle in IMA(1,1) as a function of theta	109
5.16	Decomposition of a random walk series	110
5.17	Period of cycle as a function of lambda	112
5.18	Spectrum of a cycle in a random walk	113
5.19	Estimated trends	114
5.20	Estimated cycles	114
6.1	HP cycle based on X11 and SEATS-SA series	125
6.2	Spectrum of cycle	126
6.3	Trend and trend-cycle components	127
6.4	HP cycle based on SEATS trend and on X11-SA series	128
6.5	Spectrum of cycle (SEATS trend and X11-SA series)	129
6.6	Difference between cycles (SEATS trend and X11-SA series)	130
6.7	HP cycles based on X11-SA series	131
6.8	HP cycles based on SEATS trend	131
6.9	Standard deviation of revision from concurrent to final estimation	132 133
6.10	95% C.I. for HP cycle (based on revisions)	139
7.1	Spectra in the model-based interpretation	140
7.2	Spectra of the difference (original minus cycle)	141
7.3	Decomposition of the series	148
7.4	Spectra for original series and components: series CC	149
7.5	Spectra for original series and components: series IPI	150
7.6	Spectra for original series and components: series CR	151
7.7	Spectra for original series and components: series AP	152
7.8	Squared gain of filters for components: series CC	153
7.9	Squared gain of filters for components: series IPI	154
7.10	Squared gain of filters for components: series CR	155
7.11	Squared gain of filters for components: series AP	163
7.12	AMB and HP-X11: estimated components of CC	164
7.13	AMB and HP-X11: estimated components of IPI	165
7.14	AMB and HP-X11: estimated components of CR	166
7.15	AMB and HP-X11: estimated components of AP	169
7.16	Spectra of the trend-cycle and cycle estimators
