Contents

Preface vii

Chapter 1. Hypergeometric Solutions of KZ Equations 1
1.1. Examples of Hypergeometric Integrals 1
1.2. Knizhnik-Zamolodchikov Equations 3
1.3. Examples of Solutions 5
1.4. Solutions of the KZ Equation with Values in Sing $M^{\otimes m}\left[|m|-2k\right]$ 6
1.5. Solutions of the KZ Equation with Values in Sing $L^{\otimes m}\left[|m|-2k\right]$ 8
1.6. The Classical Hypergeometric Series 8
1.7. Identities for Differential Forms 10
1.8. Hyperplane Arrangements 11

Chapter 2. Cycles of Integrals and the Monodromy of the KZ Equation 15
2.1. Cycles for Solutions in Sing $M^{\otimes m}\left[|m|-2\right]$ 15
2.2. The Quantum Group $U_q(\mathfrak{sl}_2)$ 18
2.3. The Yang-Baxter Equation and Representations of Braid Groups 20
2.4. Quantum Singular Vectors 22
2.5. The Monodromy of KZ Equations 23
2.6. A Remark on Integration Cycles 29

Chapter 3. Selberg Integral, Determinant Formulas, and Dynamical Equations 31
3.1. The Selberg Integral 31
3.2. A Connection with Finite Reflection Groups 32
3.3. An Example of a Determinant Formula 33
3.4. The Determinant Formula for Solutions in a Weight Subspace 36
3.5. General Determinant Formulas 38
3.6. Resonances 40
3.7. Dynamical Equations 43

Chapter 4. Critical Points of Master Functions and the Bethe Ansatz 49
4.1. The Gaudin Model and the Bethe Ansatz 49
4.2. Asymptotic Solutions and Eigenvectors 50
4.3. Quasi-Classical Asymptotics of Solutions to the KZ Equation 53
4.4. The Shapovalov Norm of Bethe Vectors 56

4.5. The Number of Critical Points of a Product of Powers of Linear Functions 58
4.6. Critical Points of $\Phi_{k,n}(t,z,m)$ if $m_1,\dots,m_n$ Are Natural Numbers 60
4.7. Critical Points and Fuchsian Equations with Polynomial Solutions 62
4.8. Resonant Local Systems 67

Chapter 5. Elliptic Hypergeometric Functions 69
5.1. Knizhnik-Zamolodchikov-Bernard Equations 69
5.2. The Case of $n = 1$ and $V = L_{2p}$ 70
5.3. Quasi-Classical Asymptotics of Solutions to the KZB Heat Equation 71
5.4. Elliptic Hypergeometric Functions Associated with One Marked Point 72
5.5. Integral Representations for Elliptic Hypergeometric Functions 73
5.6. Elliptic Selberg Integrals 74
5.7. Transformations Acting on the Space of Conformal Blocks 75
5.8. Relations Between Theta Functions 76
5.9. Basic Relations Between Elliptic Hypergeometric Functions 77
5.10. Macdonald Polynomials and the Shift Operator 79
5.11. Coefficients $f^{(k)}_{m,n}$ and Values of Macdonald Polynomials 80
5.12. Modular Transformations of Elliptic Hypergeometric Functions 81
5.13. Trace Functions for $U_q(sl_2)$ 82

Chapter 6. q-Hypergeometric Solutions of qKZ Equations 85
6.1. Quantum Knizhnik-Zamolodchikov Equations 85
6.2. Quasi-Classical Asymptotics of Solutions and Eigenvectors 88
6.3. An Example of Quantization of Hypergeometric Functions 89
6.4. q-Hypergeometric Solutions, General Case 97
6.5. The q-Hypergeometric Pairing 103
6.6. Quantization of the Kohno-Drinfeld Theorem 105

Bibliography 109
