

TABLE OF CONTENTS

Preface	vii
Notation and Terminology	ix
Introduction	1
Chapter I. MULTIPLE GAMMA FUNCTION AND ITS GENERALIZATIONS	13
§1. Basic integral representations	13
§2. Shintani's formulas	17
§3. The second derivative of $\zeta(s, A, x)$ at $s = 0$	24
§4. An asymptotic expansion of the multiple gamma function	34
Exercises	41
Chapter II. THE STARK-SHINTANI CONJECTURE	43
§1. Stark's general conjecture	43
§2. Transition to a more precise conjecture	48
§3. Shintani's formulas for the partial zeta function	52
§4. An example	54
Exercises	58
Chapter III. ABSOLUTE CM-PERIODS	61
§1. Shimura's period symbol p_K	61
§2. The case of abelian fields	65
§3. Conjectures on absolute CM-periods	74
§4. Numerical examples	94
§5. Further investigations on the invariant $X(c)$	108
§6. Numerical examples (continued)	126
Exercises	133
Chapter IV. EXPLICIT CONE DECOMPOSITIONS AND APPLICATIONS	135
§1. A special decomposition of a higher dimensional cube	135
§2. Topological preparations	139
§3. A sufficient condition for a cone decomposition	144
§4. Examples	147
§5. Explicit cone decompositions for index finite subgroups	149
§6. Applications	161
Exercises	166

Chapter V. APPLICATIONS OF A LIMIT FORMULA OF KRON- ECKER'S TYPE	169
§1. A limit formula of Kronecker's type	169
§2. A generalization of the exact Chowla–Selberg formula	179
§3. L -functions of orders of an algebraic number field	189
§4. Toward the reciprocity law for the h -function	197
§5. A connection of automorphic forms with group cohomology	207
Exercises	213
Appendix I. EISENSTEIN SERIES ON $GL(2)$	215
§1. Eisenstein series on $GL(2)$	215
§2. Calculations of local integrals	222
§3. The functional equation of Eisenstein series	234
§4. Eisenstein series of class 1	243
Appendix II. ON HIGHER DERIVATIVES OF L -FUNCTIONS	249
§1. A search for new invariants	249
§2. The case of the second derivatives of L -functions	253
Appendix III. TRANSCENDENTAL PROPERTY OF CM-PERIODS	269
Exercises	274
References	275
Index	281
