I Knots, links, and invariant polynomials	.	1
1 Introduction	.	3
1.1 Basic definitions	.	4
2 Reidemeister moves. Knot arithmetics	.	11
2.1 Polygonal links and Reidemeister moves	.	11
2.2 Knot arithmetics and Seifert surfaces	.	15
3 Links in 2-surfaces in \mathbf{R}^3.	.	
Simplest link invariants	.	25
3.1 Knots in Surfaces. The classification of torus Knots	.	25
3.2 The linking coefficient	.	29
3.3 The Arf invariant	.	31
3.4 The colouring invariant	.	33
4 Fundamental group. The knot group	.	37
4.1 Digression. Examples of unknotting	.	37
4.2 Fundamental group. Basic definitions and examples	.	40
4.3 Calculating knot groups	.	45
5 The knot quandle and the Conway algebra	.	49
5.1 Introduction	.	49
5.2 Geometric and algebraic definitions of the quandle	.	52
5.2.1 Geometric description of the quandle	.	52
5.2.2 Algebraic description of the quandle	.	53
5.3 Completeness of the quandle	.	54
5.4 Special realisations of the quandle: colouring invariant, fundamental group, Alexander polynomial	.	57
5.5 The Conway algebra and polynomial invariants	.	57
5.6 Realisations of the Conway algebra. The Conway-Alexander, Jones, HOMFLY and Kauffman polynomials	.	65
5.7 More on Alexander's polynomial. Matrix representation	.	66

6 Kauffman's approach to Jones polynomial	69
6.1 State models in physics and Kauffman's bracket	69
6.2 Kauffman's form of Jones polynomial and skein relations	72
6.3 Kauffman's two-variable polynomial	74
7 Properties of Jones polynomials. Khovanov's complex	75
7.1 Simplest properties	75
7.2 Tait's first conjecture and Kauffman–Murasugi's theorem	78
7.3 Menasco–Thistlewaite theorem and the classification of alternating links	79
7.4 The third Tait conjecture	80
7.5 A knot table	80
7.6 Khovanov's categorification of the Jones polynomial	80
7.6.1 The two phenomenological conjectures	88
II Theory of braids	91
8 Braids, links and representations of braid groups	93
8.1 Four definitions of the braid group	93
8.1.1 Geometrical definition	93
8.1.2 Topological definition	94
8.1.3 Algebro-geometrical definition	95
8.1.4 Algebraic definition	95
8.1.5 Equivalence of the four definitions	95
8.1.6 The stable braid group	98
8.1.7 Pure braids	98
8.2 Links as braid closures	103
8.3 Braids and the Jones polynomial	104
8.4 Representations of the braid groups	110
8.4.1 The Burau representation	110
8.4.2 A counterexample	114
8.5 The Krammer–Bigelow representation	115
8.5.1 Krammer's explicit formulae	116
8.5.2 Bigelow's construction and main ideas of the proof	116
9 Braids and links. Braid construction algorithms	121
9.1 Alexander's theorem	121
9.2 Vogel's algorithm	123
10 Algorithms of braid recognition	129
10.1 The curve algorithm for braid recognition	129
10.1.1 Introduction	129
10.1.2 Construction of the invariant	130
10.1.3 Algebraic description of the invariant	135
10.2 <i>LD</i> -systems and the Dehornoy algorithm	137
10.2.1 Why the Dehornoy algorithm stops	149
10.3 Minimal word problem for $Br(3)$	150

10.4	Spherical, cylindrical, and other braids	152
10.4.1	Spherical braids	152
10.4.2	Cylindrical braids	155
11	Markov's theorem. The Yang-Baxter equation	161
11.1	Markov's theorem after Morton	161
11.1.1	Formulation. Definitions. Threadings.	161
11.1.2	Markov's theorem and threadings	166
11.2	Makanin's generalisations. Unary braids	174
11.3	Yang-Baxter equation, braid groups and link invariants	175
III	Vassiliev's invariants	179
12	Definition and Basic notions of Vassiliev invariant theory	181
12.1	Singular knots and the definition of finite-type invariants	181
12.2	Invariants of orders zero and one	183
12.3	Examples of higher-order invariants	183
12.4	Symbols of Vassiliev's invariants coming from the Conway polynomial	184
12.5	Other polynomials and Vassiliev's invariants	186
12.6	An example of an infinite-order invariant	190
13	The chord diagram algebra	193
13.1	Basic structures	193
13.2	Bialgebra structure of algebras \mathcal{A}^c and \mathcal{A}^t . Chord diagrams and Feynman diagrams	197
13.3	Lie algebra representations, chord diagrams, and the four colour theorem	201
13.4	Dimension estimates for \mathcal{A}_d . A table of known dimensions	204
13.4.1	Historical development	204
13.4.2	An upper bound	205
13.4.3	A lower bound	206
13.4.4	A table of dimensions	208
14	The Kontsevich integral and formulae for the Vassiliev invariants	209
14.1	Preliminary Kontsevich integral	210
14.2	$Z(\infty)$ and the normalisation	214
14.3	Coproduct for Feynman diagrams	215
14.4	Invariance of the Kontsevich integral	217
14.4.1	Integrating holonomies	218
14.5	Vassiliev's module	227
14.6	Goussarov's theorem	228
14.6.1	Gauss diagrams	228

15 Atoms, height atoms and knots	233
15.1 Atoms and height atoms	233
15.2 Theorem on atoms and knots	235
15.3 Encoding of knots by d -diagrams	235
15.4 d -diagrams and chord diagrams. Embeddability criterion	239
15.5 A new proof of the Kauffman-Murasugi theorem	243
16 The bracket semigroup of knots	245
16.1 Representation of long links by words in a finite alphabet	245
16.2 Representation of links by quasitoric braids	247
16.2.1 Definition of quasitoric braids	248
16.2.2 Pure braids are quasitoric	249
16.2.3 d -diagrams of quasitoric braids	252
V Virtual knots	255
17 Basic definitions and motivation	257
17.1 Combinatorial definition	257
17.2 Projections from handle bodies	259
17.3 Gauss diagram approach	261
17.4 Virtual knots and links and their simplest invariants	262
17.5 Invariants coming from the virtual quandle	262
17.5.1 Fundamental groups	262
17.5.2 Strange properties of virtual knots	263
18 Invariant polynomials of virtual links	265
18.1 The virtual groupoid (quandle)	266
18.2 The Jones–Kauffman polynomial	273
18.3 Presentations of the quandle	274
18.3.1 The fundamental group	274
18.3.2 The colouring invariant	275
18.4 The VA -polynomial	276
18.4.1 Properties of the VA -polynomial	281
18.5 Multiplicative approach	283
18.5.1 Introduction	283
18.6 The two-variable polynomial	283
18.7 The multivariable polynomial	290
19 Generalised Jones–Kauffman polynomial	293
19.1 Introduction. Basic definitions	293
19.2 An example	299
19.3 Atoms and virtual knots. Minimality problems	299

20 Long virtual knots and their invariants	303
20.1 Introduction	303
20.2 The long quandle	304
20.3 Colouring invariant	306
20.4 The \mathfrak{V} -rational function	307
20.5 Virtual knots versus long virtual knots	308
21 Virtual braids	311
21.1 Definitions of virtual braids	311
21.2 Burau representation and its generalisations	312
21.3 Invariants of virtual braids	313
21.3.1 Introduction	313
21.3.2 The construction of the main invariant	314
21.3.3 First fruits	316
21.3.4 How strong is the invariant f ?	319
21.4 Virtual links as closures of virtual braids	323
21.5 An analogue of Markov's theorem	323
VI Other theories	325
22 3-manifolds and knots in 3-manifolds	327
22.1 Knots in \mathbf{RP}^3	327
22.2 An introduction to the Kirby theory	330
22.2.1 The Heegaard theorem	330
22.2.2 Constructing manifolds by framed links	332
22.2.3 How to draw bands	333
22.2.4 The Kirby moves	333
22.3 The Witten invariants	335
22.3.1 The Temperley–Lieb algebra	336
22.3.2 The Jones–Wenzl idempotent	339
22.3.3 The main construction	341
22.4 Invariants of links in three–manifolds	344
22.5 Virtual 3–manifolds and their invariants	345
23 Legendrian knots and their invariants	347
23.1 Legendrian manifolds and Legendrian curves	347
23.1.1 Contact structures	347
23.1.2 Planar projections of Legendrian links	348
23.2 Definition, basic notions, and theorems	350
23.3 Fuchs–Tabachnikov moves	352
23.4 Maslov and Bennequin numbers	353
23.5 Finite–type invariants of Legendrian knots	354
23.6 The differential graded algebra (DGA) of a Legendrian knot	355
23.7 Chekanov–Pushkar’ invariants	356
23.8 Basic examples	358
A Independence of Reidemeister moves	359

B Vassiliev's invariants for virtual links	363
B.1 The Goussarov–Viro–Polyak approach	363
B.2 The Kauffman approach	364
B.2.1 Some observations	365
C Energy of a knot	367
D Unsolved problems in knot theory	371
E A knot table	375
Bibliography	383
Index	398
