

Table of Contents

Foreword	xi
Preface	xiii

Part One: The One-Particle Equations

1. Quantum Mechanics and Symmetry Principles	3
a. Quantum Mechanical Formalism	3
b. Schrödinger and Heisenberg Pictures	8
c. Nonrelativistic Free-Particle Equation	9
d. Symmetry and Quantum Mechanics	13
e. Rotations and Intrinsic Degrees of Freedom	18
f. The Four-Dimensional Rotation Group	33
2. The Lorentz Group	36
a. Relativistic Notation	36
b. The Homogeneous Lorentz Group	38
c. The Inhomogeneous Lorentz Group	44
3. The Klein-Gordon Equation	54
a. Historical Background	54
b. Properties of Solutions of K-G Equation	55
c. The Position Operator	60
d. Charged Particles	63
4. The Dirac Equation	65
a. Historical Background	65
b. Properties of the Dirac Matrices	70
c. Relativistic Invariance	74
d. Solutions of the Dirac Equation	82
e. Normalization and Orthogonality Relations: Traces	85
f. Foldy-Wouthuysen Representation	91
g. Negative Energy States	95
h. Dirac Equation in External Field—Charge Conjugation	99

5. The Zero Mass Equations	108
a. The Two-Component Theory of the Neutrino	108
b. The Polarization States of Mass Zero Particles	113
c. The Photon Equation	116

Part Two: Second Quantization

6. Second Quantization: Nonrelativistic Theory	121
a. Permutations and Transpositions	121
b. Symmetric and Antisymmetric Wave Functions	123
c. Occupation Number Space	126
d. The Symmetric Case	128
e. Creation and Annihilation Operators	130
f. Fock Space	134
g. The Antisymmetric Case	137
h. Representation of Operators	140
i. Heisenberg Picture	146
j. Noninteracting Multiparticle Systems	148
k. Hartree-Fock Method	150
7. Relativistic Fock Space Methods	156
a. The Neutral Spin 0 Boson Case	156
b. Lorentz Invariance	164
c. Configuration Space	167
d. Connection with Field Theory	183
e. The Field Aspect	193
f. The Charged Scalar Field	195
g. Conservation Laws and Lagrangian Formalism	207
h. The Pion System	211
8. Quantization of the Dirac Field	218
a. The Commutation Rules	218
b. Configuration Space	224
c. Transformation Properties	231
d. The Field Theoretic Description of Nucleons	236
9. Quantization of the Electromagnetic Field	240
a. Classical Lagrangian	240
b. Quantization: The Gupta-Bleuler Formalism	242
c. Transformation Properties	252

Part Three: The Theory of Interacting Fields

10. Interaction Between Fields	257
a. Symmetries and Interactions	257
b. Restrictions Due to Space-Time Symmetries	264
c. Electromagnetic Interactions	272
d. The Meson-Nucleon Interaction	280
e. The Strong Interactions	285
f. The Weak Interactions	294
g. The Equivalence Theorem	301
11. The Formal Theory of Scattering	308
a. Potential Scattering	309
b. The Lippmann-Schwinger Equations	315
c. The Dirac Picture	316
d. Unitarity of S Matrix	325
e. The Reactance Matrix	328
f. The U Matrix	330
12. Simple Field Theoretic Models	339
a. The Scalar Field	339
b. The Lee Model	352
c. Other Simple Models	370
d. The Chew-Low Theory	372
13. Reduction of S Matrix	415
a. Formal Introductions	415
b. The Scattering of a Neutral Meson by a Nucleon	426
c. Wick's Theorem	435
d. The Representation of the Invariant Functions	442
14. Feynman Diagrams	447
a. Interaction with External Electromagnetic Field	447
b. Feynman Diagrams for Interacting Fields	466
c. Momentum Space Considerations	472
d. Cross Sections	484
e. <i>Examples:</i> 1. Compton Scattering	487
2. Pion Photoproduction	493
3. Pion Decay	495
4. β Decay of the Neutron	498
f. Symmetry Principles and S Matrix	501

15. Quantum Electrodynamics	507
a. The Self-Energy of a Fermion	508
b. Mass Renormalization and the Nonrelativistic Lamb Shift	524
c. Radiative Corrections to Scattering	531
d. The Anomalous Magnetic Moment and the Lamb Shift	543
e. Vacuum Polarization	550
f. Applications	561
g. The Furry Picture	566
h. Renormalization in Meson Theory	575
16. Quantitative Renormalization Theory	584
a. Primitively Divergent Diagrams	584
b. The Renormalizability of Quantum Electrodynamics	607
c. The Separation of Divergences from Irreducible Graphs	615
d. The Separation of Divergences from Reducible Graphs	619
e. The Ward Identity	625
f. Proof of Renormalizability	629
g. The Meaning of Charge Renormalization	638
h. General Remarks	640

Part Four: Formal Developments

17. The Heisenberg Picture	649
a. Vacuum Expectation Values of Heisenberg Operators	650
b. The Lehmann Spectral Representation	659
c. The Magnitude of the Renormalization Constants	677
d. The S Matrix in the Heisenberg Picture	683
e. Low Energy Theorems	696
f. The Bound State Problem	705
18. The Axiomatic Formulation	721
a. Wightman Formulation	723
b. The LSZ Formulation of Field Theory	742
c. Integral Representations of a Causal Commutator	764
d. Dispersion Relations	776
e. Outlook	826
Problems and Suggested Further Reading	828
References	853
Index	891
Compendium of Useful Formulae	907
