

# TABLE OF CONTENTS

---

<i>Introduction</i>	<i>xiv</i>
<b>1 Visual Basic and the Web</b>	<b>1</b>
What's a Web Application?	3
Why Write a Web Application in VB?	4
What's the Difference between IIS and DHTML Applications?	6
This Book Concentrates on IIS Applications	6
<b>2 IIS Applications</b>	<b>9</b>
How Browsers Request Files	10
So Many Requests, So Little Time	12
ASP Object Model	13
Server Object	14
Application Object	15
Session Object	16
Request Object	18
Response Object	19
ScriptingContext Object	21
ObjectContext Object	22
Web Applications vs. Client-Server Applications	23
<b>3 Building ASP Applications</b>	<b>27</b>
Understanding the Structure of an ASP Application	28
Using Include Files	30
Understanding Language Independence	31
Using Cookies with ASP	32
Using the Scripting.Dictionary Object	34
A (Very) Brief Introduction to HTML and Forms	39
Creating a Self-Modifying ASP Application	42
Tying It All Together—Caching Table Data	52

<b>4</b>	<b>Introduction to WebClasses</b>	<b>65</b>
	Understanding How WebClasses Work	66
	Understanding HTML Templates	71
	Writing HTML without Templates	72
	Exploring the WebClass Event Sequence	75
	Optimize, Optimize, Optimize	77
	Comparing the Advantages and Disadvantages of VB/WebClasses vs. ASP	81
<b>5</b>	<b>Securing an IIS Application</b>	<b>87</b>
	Understand How Security Works	88
	Create the Project	88
	Create an HTML Template	92
	Add a Custom Event	100
	Add a Custom WebItem	103
	Test the Security	113
	Compile the Project	115
	Improve Site Security	119
	Take Advantage of NT Security	120
<b>6</b>	<b>WebClass Debugging and Error Handling</b>	<b>125</b>
	Exploring the WebClass Event Sequence	126
	Debugging Client-Side Script	136
	Logging and Displaying Errors	140
	Trapping Errors	144
	Error-Handling Scenario	146
<b>7</b>	<b>Controlling Program Flow</b>	<b>157</b>
	Understanding Program Flow	158
	Creating the AccountInfo Project	159
	Repurposing WebClasses	170
	Using Multiple WebClasses in an Application	174
<b>8</b>	<b>Maintaining State in IIS Applications</b>	<b>191</b>
	Selecting a State Maintenance Option	192
	Maintaining State with Session Variables	194
	Maintaining State with Cookies	198
	Maintaining State with QueryString Variables	201

Maintaining State with Hidden Form Variables	203
Maintaining State in a Database	204
Summing Up State Maintenance Options	206
Exploring the State Maintenance Options	206
Using Session Variables to Maintain State	206
Using Cookies to Maintain State	208
Using QueryString/URLData Variables to Maintain State	208
Using Form Variables to Maintain State	209
Using Database Tables to Maintain State	210
Storing State across Sessions	219
Eliminating Obsolete Data	221
Caching Information	221
Writing a StoredRecordset Class	223
Writing a StoredDictionary Class	227
Using the CStoredRecordset and CStoredDictionary Classes	230
Summing Up State Maintenance	232
<b>9 Dealing with Multiple Browsers</b>	<b>235</b>
Understanding Differences between Browsers	236
Determining Browser Type	238
Using the Browser Capabilities Component	241
Writing Browser-Specific Code	244
Writing Browser-Specific HTML Templates	244
Writing Browser-Specific HTML from a WebClass	246
Using Replaceable Markers to Create Browser-Specific Pages	248
Writing Code with Code	248
<b>10 Retrieving and Storing Data in Databases</b>	<b>251</b>
Understanding ADO	252
Introducing the ADO Object Model	253
Opening and Closing Connections	254
Retrieving Data with ADO	256
Retrieving Data with the ADO Connection Object	256
Using ADO Cursor Types	256
Retrieving Data with the Recordset Object	257
Using ADO Record-Locking Options	259
Understanding ADO's Unfortunate Options Argument	260
Retrieving Data with the Command Object	261
Investigating Stored Procedures	265

Accessing Databases from WebClasses	273
Get In, Get the Data, Get Out	274
Write Functions to Simplify ADO	276
<b>11 Using ActiveX DLLs from WebClasses</b>	<b>279</b>
Thinking of WebClasses as Glue	280
Accessing ActiveX DLLs from WebClasses	281
Using theObjectContext Object with WebClasses	282
Testing ActiveX DLLs from a WebClass	284
Persisting ActiveX Objects	290
Store Object Data, Not Objects	290
Automate Object Persistence and Retrieval	294
Maintain State via Object Persistence	296
Building a Browser-Based Code Repository	297
Techniques Included in the CodeRepository Project	297
<b>12 IIS Applications and Microsoft Transaction Server</b>	<b>313</b>
What Is MTS?	314
How Does MTS Fit into the IIS/Web Application Model?	317
Using Microsoft Transaction Server Explorer	317
How Can MTS Help You?	320
When Should You Use MTS?	321
How Do You Use MTS Components?	322
How Do You Move a Project into MTS?	328
Make MTS-Specific Code Changes	329
Compile the Project	329
Create and Configure an MTS Package	331
Run the Project	333
Change DCOM Permissions	334
<b>13 Deploying WebClass Applications</b>	<b>339</b>
Preparing for Deployment	340
Clean Up the Code	341
Test in Compiled Mode	342
Generate Likely Errors	342
Deploy to a Test Server	343
Beta Test the Application	343
Determine the Target Server's Configuration	344
Creating an Installation Package	345

---

Configuring the Target Server	347
Capture the Server Configuration Settings	348
Run the Installation	348
Dealing with Permissions Issues	350
<b>14 What's Next?</b>	<b>355</b>
Where Are Web Applications Headed?	356
What about Java and CORBA?	359
What about Database Technology?	361
What about XML?	362
Conclusion	367
 <i>Index</i>	 368
