<i>Preface</i>	<i>page</i>	ix
<i>Maps</i>		xi
1 Overview		1
Telescopic observations		1
Orbital and rotational motions		2
Global structure and topography		5
Atmosphere		5
Surface temperatures		9
Stability of water		11
Global geology		14
Meteorites		19
Carbonaceous chondrites and chemical fractionation		19
Martian meteorites		20
2 Impact craters		23
Crater-forming objects		23
Crater morphology		24
Simple craters		24
Complex craters		25
Multi-ringed basins		26
Crater formation		27
Ejecta morphology		31
Crater modification		34
Crater size frequencies and ages		36
Summary		41
3 Volcanism		43
Basaltic volcanism		43
Effect of Martian conditions		44
Tharsis		46
Tharsis Montes		46
Olympus Mons		51
Alba Patera		54
Small Tharsis shields		57
Elysium		59
Lahars and dikes		60
Cerberus–Amazonis		64
Hellas–Hesperia		68
Plains volcanism		70
Volcano–ice interactions		73
Summary		74

4	Global structure and tectonics	77
	Formation of the core	77
	Global dichotomy	78
	Thickness of the lithosphere	84
	Formation of Tharsis	84
	Surface indicators of stress	86
	Extensional structures	86
	Compressional structures	89
	Deformational features related to Tharsis	90
5	Canyons	95
	Physiography	96
	Canyon walls	102
	Landslides	103
	Interior layered deposits	105
	Formation of the canyons	110
	Summary	111
6	Channels, valleys, and gullies	113
	Outflow channels	113
	Circum-Chryse channels	114
	Description	114
	Mode of formation	116
	Tharsis	121
	Amazonis and Elysium Planitiae	122
	Description	122
	Mode of formation	126
	Utopia Planitia	127
	Hellas	129
	Argyre	130
	The poles	130
	Valley networks	131
	General description	132
	Drainage basins	137
	Origin	139
	Noachian valleys	140
	Post-Noachian valleys	144
	Gullies	144
	Summary	147
7	Lakes and oceans	149
	Paleolakes in the cratered uplands	149
	Argyre and Hellas	156

Northern oceans	160
Shorelines	164
Evidence for marine sediments	167
Evidence for ice	168
Possible fate of a northern ocean	168
Summary	171
8 Ice	173
The stability of ice	174
Spectral evidence for ice	175
Permafrost	175
Ice-rich surficial deposits at high latitudes	177
Fretted terrain	178
Terrain softening	179
Lobate debris aprons	180
Lineated valley fill	184
Origin of the fretted valleys	185
Glaciers	187
Other possible indicators of ground ice	188
Crater ejecta patterns	188
Polygonal fractures	189
Thermokarst	191
Summary	191
9 Wind	193
Entrainment of particles by the wind	193
Dust storms	195
Wind streaks and tails	197
Dunes, ripples, and drifts	198
Regional eolian deposits	203
Wind erosion	204
Summary	205
10 Poles	211
The present polar environments	211
General description of polar terrains	212
Northern polar deposits	212
Upper unit	212
Basal unit	218
Southern polar deposits	221
The Dorsa Argentea Formation	222
The CO ₂ residual cap	225
Summary	226

11 The view from the surface	229
Vikings 1 and 2	229
Mars Pathfinder	231
Mars Exploration Rovers	231
Spirit	232
Gusev crater regional context	232
Gusev plains	235
Columbia Hills	238
Clovis class	239
Wishstone class	240
Peace class	241
Watchtower class	241
Backstay class	242
Opportunity	244
Regional context	244
The Meridiani rocks and soils	246
The Burns Formation	246
Post-depositional alteration	252
Groundwater movement	253
Evaporitic sources	254
Summary	254
12 Climate change	257
Noachian climate	257
Greenhouse warming	258
Retention of a dense CO ₂ atmosphere	260
Post-Noachian climate history	262
Recent climate changes	265
Summary	265
13 Implications for life	267
The origin of life	268
Habitability	271
Survival	272
ALH84001	273
Looking for life	274
Summary	274
14 Summary	277
<i>Reference</i>	283
<i>Index</i>	297
