## Part I Inverse and Semi-discrete Problems

---

|          |  |           |
|----------|--|-----------|
| <b>1</b> | <b>Ill-posed problems and regularization methods</b> . . . . .                       | <b>5</b>  |
| <b>2</b> | <b>Approximate inverse in <math>L^2</math>-spaces</b> . . . . .                      | <b>11</b> |
| 2.1      | The idea of approximate inverse . . . . .  | 11        |
| 2.2      | A first example: The Radon transform . . . . .                                       | 17        |
| <b>3</b> | <b>Approximate inverse in Hilbert spaces</b> . . . . .                               | <b>25</b> |
| 3.1      | Semi-discrete operator equations . . . . .   | 25        |
| 3.2      | Convergence and stability . . . . .  | 32        |
| <b>4</b> | <b>Approximate inverse in distribution spaces</b> . . . . .                          | <b>39</b> |
| 4.1      | Mollifier and reconstruction kernels in dual spaces<br>of smooth functions . . . . . | 40        |
| 4.2      | Dealing with semi-discrete equations . . . . .                                       | 44        |
| <b>5</b> | <b>Conclusion and perspectives</b> . . . . .   | <b>49</b> |

## Part II Application to 3D Doppler Tomography

---

|          |   |           |
|----------|---|-----------|
| <b>6</b> | <b>A semi-discrete setup for Doppler tomography</b> . . . . .             | <b>55</b> |
| <b>7</b> | <b>Solving the semi-discrete problem</b> . . . . .                        | <b>63</b> |
| 7.1      | Definition of the operators $\Pi_{p,q,r}$ and $\mathbf{E}_d$ . . . . .    | 63        |
| 7.2      | Computation of reconstruction kernels for $\mathbf{D}_j$ . . . . .        | 70        |
| 7.3      | The method of approximate inverse for $\Psi_{p,q,r} \mathbf{D}$ . . . . . | 76        |
| <b>8</b> | <b>Convergence and stability</b> . . . . .                                | <b>81</b> |

|           |   |     |
|-----------|---|-----|
| <b>9</b>  | <b>Approaches for defect correction</b> .....                       | 89  |
| 9.1       | Potentials as solutions of elliptic boundary value problems . . . . | 90  |
| 9.2       | The Neumann problem .....   | 93  |
| 9.2.1     | A boundary element method for the Neumann<br>problem .....          | 93  |
| 9.2.2     | The computation of the Newton potentials .....                      | 94  |
| 9.2.3     | Numerical results .....   | 100 |
| 9.3       | The Dirichlet problem .....   | 101 |
| <b>10</b> | <b>Conclusion and perspectives</b> .....                            | 105 |

### Part III Application to the spherical mean operator

---

|           |  |     |
|-----------|--|-----|
| <b>11</b> | <b>The spherical mean operator</b> .....           | 111 |
| 11.1      | Spherical means in SONAR and SAR .....             | 111 |
| 11.2      | Properties of the spherical mean operator .....    | 113 |
| 11.3      | Approximate inverse for $M$ .....                  | 118 |
| <b>12</b> | <b>Design of a mollifier</b> .....                 | 123 |
| <b>13</b> | <b>Computation of reconstruction kernels</b> ..... | 133 |
| <b>14</b> | <b>Numerical experiments</b> .....                 | 139 |
| <b>15</b> | <b>Conclusion and perspectives</b> .....           | 145 |

### Part IV Further Applications

---

|           |   |     |
|-----------|---|-----|
| <b>16</b> | <b>Approximate inverse and X-ray diffractometry</b> .....   | 151 |
| 16.1      | X-ray diffractometry .....  | 151 |
| 16.2      | Approximate inverse for the Laplace transform .....   | 153 |
| 16.3      | A solution scheme for the X-ray diffractometry problem .....  | 161 |
| <b>17</b> | <b>A filtered backprojection algorithm<br/>for thermoacoustic computerized tomography (TCT)</b> ..... | 165 |
| 17.1      | Thermoacoustic computerized tomography (TCT) .....  | 165 |
| 17.2      | An inversion method for the spherical geometry .....  | 168 |
| 17.3      | Numerical results .....   | 175 |
| <b>18</b> | <b>Computation of reconstruction kernels in 3D computerized<br/>tomography</b> .....                  | 181 |
