<b>1 The Objective Laws Of Classical Electrodynamics: The Effect Of Gravitation On Electromagnetism</b>	<b>1</b>
1.1 Introduction . . . . .	2
1.2 The Objective Laws of Classical Electrodynamics . . . . .	3
1.3 Discussion . . . . .	10
<b>2 First And Second Order Aharonov Bohm Effect In The Evans Unified Field Theory</b>	<b>17</b>
2.1 Introduction . . . . .	17
2.2 Argument Against The Standard Model . . . . .	19
2.3 Explanation of the First Order AB Effect in Evans Theory . . .	20
2.4 Electromagnetic or Second Order Aharonov Bohm Effect . . . .	22
2.5 Discussion . . . . .	23
<b>3 The Spinning Of Spacetime As Seen In The Inverse Faraday Effect</b>	<b>27</b>
3.1 Introduction . . . . .	27
3.2 Derivation of the Evans Spin Field from First Principles . . .	28
3.3 The Inverse Faraday Effect in One Electron and Atomic and Molecular Material . . . . .	31
<b>4 On The Origin Of Magnetization And Polarization</b>	<b>35</b>
4.1 Introduction . . . . .	35
4.2 Definition of Spacetime Magnetization and Polarization . . . .	37
4.3 Magnetization and Polarization in Field Matter Interaction . .	39
4.4 Magnetization and Polarization in the Standard Model . . . .	40
<b>5 Explanation Of The Eddington Experiment In The Evans Unified Field Theory</b>	<b>47</b>
5.1 Introduction . . . . .	47
5.2 Classical Field Theory on the Eddington Effect . . . . .	48
5.3 The Fundamental Vector Potential Magnitude $A^{(0)}$ . . . . .	52

<b>6 The Coulomb And Ampère-Maxwell Laws In The Schwarzschild Metric, A Classical Calculation Of The Eddington Effect From The Evans Unified Field Theory</b>	<b>57</b>
6.1 Introduction . . . . .	58
6.2 The Coulomb and Ampère-Maxwell Laws From The Unified Field Theory . . . . .	58
6.3 Refraction Of Electromagnetic Radiation By Gravitation . . . . .	62
<b>7 Generally Covariant Heisenberg Equation From The Evans Unified Field Theory</b>	<b>73</b>
7.1 Introduction . . . . .	74
7.2 Angular Momentum Forms And Densities . . . . .	75
7.3 Discussion . . . . .	79
<b>8 Metric Compatibility Condition And Tetrad Postulate</b>	<b>85</b>
8.1 Introduction . . . . .	86
8.2 Seven Proofs Of The Tetrad Postulate . . . . .	87
8.3 Physical Meaning Of The Metric Compatibility Condition And The Tetrad Postulate . . . . .	92
<b>9 Derivation Of The Evans Lemma And Wave Equation From The First Cartan Structure Relation</b>	<b>97</b>
9.1 Introduction . . . . .	98
9.2 Proof Of The Theorem . . . . .	98
9.3 Application To The Class Of Aharonov Bohm Effects . . . . .	100
<b>10 Proof Of The Evans Lemma From The Tetrad Postulate</b>	<b>105</b>
10.1 Introduction . . . . .	105
10.2 Advantages Of Cartan Geometry . . . . .	106
10.3 First Proof Of The Evans Lemma From The Tetrad Postulate . .	108
10.4 Second Proof Of The Evans Lemma From The Tetrad Postulate	110
10.5 Discussion . . . . .	112
<b>11 Self Consistent Derivation Of The Evans Lemma And Application To The Generally Covariant Dirac Equation</b>	<b>117</b>
11.1 Introduction . . . . .	117
11.2 Geometrical Self Consistency Of The Evans Lemma . . . . .	118
11.3 Structure Of The Dirac Equation . . . . .	124
<b>12 Quark Gluon Model In The Evans Unified Field Theory</b>	<b>131</b>
12.1 Introduction . . . . .	132
12.2 Perturbation Of Exact Flavor Symmetry By Momentum Exchange	134
12.3 Quark Color Symmetry . . . . .	137

<b>13 The Origin of Intrinsic Spin and the Pauli Exclusion Principle in the Evans Unified Field Theory</b>	<b>141</b>
13.1 Introduction . . . . .	142
13.2 Electrodynamics . . . . .	142
13.3 Fermionic Matter Field And The Dirac Equation . . . . .	145
13.4 Strong Field Theory . . . . .	146
13.5 Majorana And Weinberg Equations . . . . .	147
<b>14 On The Origin Of Dark Matter As Spacetime Torsion</b>	<b>153</b>
14.1 Introduction . . . . .	154
14.2 The Gravitational Sector Of The Evans Unified Field Theory . .	155
14.3 Approximations To The General Theory . . . . .	155
<b>15 Generally Covariant Quantum Mechanics</b>	<b>163</b>
15.1 Introduction . . . . .	164
15.2 A Simple Derivation Of The Heisenberg Equation Of Motion . .	165
15.3 The Generally Covariant Heisenberg Equation . . . . .	166
<b>16 General Covariance And Coordinate Transformation In Classical And Quantum Electrodynamics</b>	<b>173</b>
16.1 Introduction . . . . .	174
16.2 General Coordinate Transformation . . . . .	174
16.3 Special Relativistic Limit . . . . .	176
<b>17 The Role Of Gravitational Torsion In General Relativity: The S Tensor</b>	<b>181</b>
17.1 Introduction . . . . .	182
17.2 Derivation Of The S Tensor . . . . .	183
17.3 Field Equation For The S Tensor . . . . .	185
17.4 Discussion . . . . .	187
<b>18 Explanation Of The Faraday Disc Generator In The Evans Unified Field Theory</b>	<b>193</b>
18.1 Introduction . . . . .	194
18.2 Rotational Dynamics and Cartan Geometry . . . . .	196
18.3 Faraday Disk Generator . . . . .	199
18.4 Induction By Solenoid . . . . .	201
<b>19 Experiments To Test The Evans Unified Field Theory And General Relativity In Classical Electrodynamics</b>	<b>207</b>
19.1 Introduction . . . . .	208
19.2 Faraday Rotating Disc Experiment . . . . .	208
19.3 Suggested New Experiments . . . . .	213
19.4 Discussion . . . . .	216
