Preface xii

Part I Welfare economics

Introduction to Part I 2

1 A quick primer on consumer demand 5
1.1 Introduction 5
1.2 Some key definitions 5
1.3 Utility functions 9
1.4 The consumer's utility maximization problem 10
1.5 Some other useful relations in demand theory 15
1.6 Consumer's surplus and measurement of Welfare Changes 16
1.7 Conclusions 20

2 Perfect competition and Pareto optimality 21
2.1 Introduction 21
2.2 Paretian ranking of social states 21
2.3 Pareto optimality 22
2.4 The classical theorems of welfare economics 27
2.5 An extension to the case of uncertainty 36
2.6 The theorem of second best 44
2.7 Conclusions 46

3 Forms of the social welfare function 47
3.1 Introduction 47
3.2 Early attempts at formulating an approach to distribution 47
3.3 Aggregating individual preferences to arrive at social choice 52
3.4 Arrow's general possibility and other impossibility theorems 54
3.5 Beyond the Arrow framework 61
3.6 Forms of social welfare functions 63
3.7 Concluding remarks 66

Part II The theory of public expenditure

Introduction to Part II 70

4 External effects and the market mechanism 73
4.1 Introduction 73
4.2 Effects of externalities 74
4.3 A policy example: the pricing of education 79
4.4 Common property resources 83
4.5 Multilateral externalities 85
4.6 Conclusions 87

5 The theory of pure public goods 89
5.1 Introduction 89
5.2 Pareto optimality with pure public goods 90
5.3 Public goods with distortionary taxation 93
5.4 The free-rider problem 94
5.5 Private provision of public goods 103
5.6 Voting models of public goods 108
5.7 Concluding remarks 112

6 Topics in the theory of public goods 114
6.1 Introduction 114
6.2 The theory of clubs 114
6.3 The Tiebout hypothesis 117
6.4 Multi-product clubs 122
6.5 Financing pure public goods with distortionary taxation 126
6.6 Public goods provision with asymmetric information 129
6.7 Rent seeking 135
6.8 Conclusions 142

Part III The theory of taxation

Introduction to Part III 146

7 The effects of taxes on savings 149
7.1 Introduction 149
7.2 The elementary life-cycle model of saving 149
7.3 Capital market imperfections and the life-cycle model 154
7.4 Broader life-cycle models of savings and taxes 157
7.5 Aggregate savings and taxation 158
7.6 A consumption/expenditure tax 161
7.7 Savings by firms 168
7.8 Social security, pensions and savings 168
7.9 The extended life-cycle models of savings 170
7.10 Empirical evidence on effects of taxes on savings 173
7.11 Conclusions 175

8 Taxation and labor supply 177
8.1 Introduction 177
8.2 The basic model of labor supply 177
8.3 Comparison of the effects of various types of taxes 180
8.4 Taxation and the decision to enter the labor market 181
8.5 Effects of a progressive tax on labor supply 184
8.6 A summary of the empirical evidence on effects of lower taxes on labor supply 191
8.7 Conclusions 196
Appendix 197

9 The effects of taxes on investment behavior 199
9.1 Introduction 199
9.2 The Fisherian model 199
9.3 The aggregate approach 203
9.4 Comparing the effects of an investment tax credit versus a corporate tax cut: A Cobb–Douglas example 213
9.5 Decision on the financing of investment expenditure 215
9.6 The effective rate of taxation and the cost of finance 215
9.7 Conclusions 222

10 Taxation and risk taking 224
10.1 Introduction 224
10.2 Effects of taxation on risk taking by households 224
10.3 The Modigliani–Miller theorem and decisions on the financing of investment expenditure 228
10.4 The effects of progression on risk taking 236
10.5 Concluding comments 238

11 The theory of tax incidence 239
11.1 Introduction 239
11.2 Tax incidence in the two-sector model of general equilibrium 240
11.3 Tax incidence in a model of involuntary unemployment 248
11.4 Extensions of the basic model 253
11.5 Tax incidence in a model with a rate of return regulation 254
11.6 Conclusions 259

12 Tax incidence in dynamic models 261
12.1 Introduction 261
12.2 The neoclassical model of economic growth 261
12.3 Balanced growth path tax incidence 265
12.4 Taxation in the life-cycle model 267
12.5 Tax incidence in a monetary version of the Solow model 270
12.6 Tax incidence in more general life-cycle models 272
12.7 Land rent taxation in an intertemporal economy 282
12.8 Tax and debt as revenue instruments 284
12.9 Conclusions 289

13 Some results in commodity taxation 292
13.1 Introduction 292
13.2 Elasticity type rules in commodity taxation 292
13.3 Uniform commodity taxation 298
13.4 Redistributive indirect taxation 299
13.5 Extent of redistribution through commodity taxation 303
13.6 The value added tax (VAT) 306
13.7 Conclusions 311

14 Aspects of income taxation 312
14.1 Introduction 312
14.2 Optimal linear taxation 312
14.3 Optimal non-linear income taxation (Mirrlees and Ramsey) 315
14.4 Information theoretic foundations of optimal tax theory 322
14.5 Optimal taxation with imperfect substitution of labor 329
14.6 Optimal wage and interest taxation in steady state 331
14.7 The optimal mix of direct and indirect taxes 336
14.8 Conclusions 339
Appendix 340

15 Topics in the theory of taxation 341
15.1 Introduction 341
15.2 Taxation in models of endogenous growth 341
15.3 Problems of income tax indexation 345
15.4 Time inconsistency 348
15.5 Tax compliance and tax evasion 355
15.6 Intertemporal tax evasion: Andreoni's model 361
15.7 Concluding comments 364

16 Tax reform 366
16.1 Introduction 366
16.2 Welfare foundations of tax reform 372
16.3 Tax reform in a dynamic context 377
16.4 The marginal approach to tax reform 382
16.5 Conclusions 387

Part IV Applied problems in public economics

Introduction to Part IV 390

17 Pricing in the public sector 391
17.1 Introduction 391
17.2 The Ramsey–Boiteux linear pricing problem 391
17.3 Some simplified examples 395
17.4 The optimality of marginal cost pricing 397
17.5 Second best Ramsey–Boiteux pricing once again 402
17.6 Redistributive Ramsey (Feldstein) pricing – the general case 405
17.7 Multi-part tariffs 406

17.8 Peak load pricing 413
17.9 Pricing of joint products – allocation of common costs 417
17.10 Conclusions 423

18 International aspects of taxation 424
18.1 Introduction 424
18.2 The theory of tariffs in an open economy 424
18.3 International fiscal coordination: interest taxation 430
18.4 Integrating personal and corporate taxation in an open economy 435
18.5 Ramsey optimal taxation in an open economy 439
18.6 Concluding remarks 440

19 Cost-benefit analysis 443
19.1 Introduction 443
19.2 Criteria for cost-benefit analysis 445
19.3 The social rate of discount 447
19.4 Evaluating benefits and costs – shadow prices 449
19.5 Some difficulties in the measurement of benefits and costs 458
19.6 Conclusions 458

Part V Fiscal Federalism

Introduction to Part V 462

20 Issues in fiscal federalism 463
20.1 Introduction and background 463
20.2 Efficiency and equity in a federal economy 464
20.3 Equity considerations with layers of governments 465
20.4 Rationale for the existence of subcentral authorities 466
20.5 Other roles of subcentral authorities 472
20.6 The optimal size of local jurisdictions 473
20.7 Conclusions 478
Appendix 479

21 Grants and taxes in federal countries 484
21.1 Introduction 484
21.2 Purposes of grants 484
21.3 Types of grants 492
21.4 The effects of various types of grants – traditional models 493
21.5 The new models of the effects of grants 498
21.6 Tax assignment in federal countries 501
21.7 Conclusions 506

Problems 508
Bibliography 521
Name index 550
Subject index 554
